I am supportive of the Licensing.

Regarding the arrangement of closure of columbaria, the operator would be required to provide satisfactory arrangements with the owners / descendents.

What if no further contact person could be found?

And how far should the operator seek to satisfy the owner?

It would not be fair if the owner paid a less amount for the existing niche but demand a very high quality niche in exchange.

In addition, existing private columbaria may be operated by someone less educated or with less resources to prepare management plan, maintenance report etc.

Would there be any resources or guidance to assist these existing private columbaria achieve regularisation?

As for the consideration of public's interest, I agree that it is most crucial to respect the views of the residents.

Yet, there will always be people opposing the setup of columbaria anywhere.

How could you approve or disapprove the application of licensing given opposition for such negative facility is almost expected everywhere?

Thank you for your good effort to improve the situation.

You may treat the above as public information if you wish to.
