Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: 電力市場未來發展第二期諮詢

Urgent Return Receipt

30/03/2006 23:36

敬啟者,

本人工作於一外資投資銀行, 居住於新界區。 以下是本人對電力市場未來發展第二期諮詢的意見:

(環保措施)

- 本人很關心空氣質素, 不介意分擔減少排放所涉及的開支, 因為這是市民應負的責任。
- 本人認為將減排設備回報率降低至7%極不恰當, 因這有違促進改善環境的目標。
- 本人支持政府要求兩電增加使用天然氣發電, 但政府必須兼顧不同燃料的均衡應用, 以免過於依重某些燃料, 一旦這燃料供應出現問題, 會造成電力不足的問題, 最終影響我們小市民。

(可再生能源)

- 風能的可靠度受不可預計的天文條件所影響, 在那些無風的日子, 便須靠傳統的發電設施提供電力, 因此香港需研究風能的可行性。
- 由於可再生能源的可靠度低及每度電的成本高昂, 香港需小心設定可再生能源應佔的比例, 以免大幅增加供電成本及拖低整體供電可靠度。
- 但香港人多地小, 要發展可再生能源並不容易, 我們更擔心會因此令到電價大幅上升。若政府要認真發展可再生能源, 必須提供土地及作出相關協助。

支持環保的市民
M.C. Tong

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

M Chan

Economic Development and Labour Bureau,

Main & East Wings,
Lower Albert Road, Central,
Hong Kong

Dear Sir,

Stage II Consultation
Future Development of the Electricity Market in Hong Kong

With reference to the captioned Consultation Paper, I would like to give my comments as follows:

- a. Basically, I support the bilateral agreement structure similar to the current Scheme of Control Agreements regime for regulating the power companies after 2008. Also, the current institutional setup to monitor the power companies works well. Such institutional setup should be retained for the post-2008 regime. It is appropriate and reasonable that the permitted return of the power companies is based on average net fixed asset. I believe that this approach would provide financial incentives to the power companies to invest for maintaining/further improvement on operational efficiency, supply reliability and customer service.
- b. There is a disadvantage on reducing the present rate of return (ROR) of the power companies from 13.5% to 7%-11% after 2008. The proposed ROR is simply too low to attract the long-term investment needed by the power industry. Such reduction will discourage investment and affect the supply reliability in the future. Since the current electricity tariffs are very reasonable and affordable, it is not necessary to further lower the tariffs by reducing the ROR at the expense of jeopardizing the supply reliability. Moreover, there is no evidence that HK's tariffs are too high, nor that lowering them will not impact reliability. It is not a proper decision-making to cut tariffs and returns on the supposition that they are too high, particularly when system reliability is at stake.
- c. Being a world financial centre with most people living in high-rise buildings, reliability of electricity supply is of paramount importance. Hence it would be risky for Hong Kong to rely on the Mainland for electricity supply in the future. This is because based on the past and present performance of the power companies in the Mainland, the supply reliability and adequacy is poor. Moreover, from the environmental perspective, the generating units in the Mainland give far more pollutants than those in Hong Kong. If Hong Kong imported electricity from the Mainland, this would worsen the air quality in the region of Pearl River Delta and subsequently create more pollution in Hong Kong. So how can supply from the Mainland can help to achieve your policy objective in minimizing the environmental impact caused by the production and use of energy?

Finally, I hope that after considering my view, the final regulatory framework will be able to provide a very stable and predictable environment for power companies to invest and maintain a world-class electricity infrastructure for Hong Kong. This, in return, will provide consumers with affordable and reasonable tariffs at high reliability and good quality of services.

Yours faithfully,

M. Ching

Subject: Comments on Stage II Consultation Paper on Future
Development of the Electricity Market in Hong Kong

Urgent Return Receipt

Dear Sir,

**Comments on Stage II Consultation Paper on Future Development of the
Electricity Market in Hong Kong**

I am writing to express my views as follows:

- Environmental protection is crucial but most of the air pollution in Hong Kong is caused by emissions from Guangdong Province. Further reducing the emission from power companies alone may not be helpful to improve Hong Kong's air quality. The HKSAR Government should strive to negotiate emission trading with Guangdong Government to reduce the total emission. On the other hand, promoting the use of energy efficient equipment and demand-side-management should help to lower the electricity demand and hence reduce emission ultimately.
- Although I agree with the introduction of renewable energy in HK, one should consider specific Hong Kong regional situation in deciding the renewable energy policy. It would be disastrous if the power companies build an enormous wind farm with extremely low utility rate at Sai Kung or elsewhere due to the renewable energy policy or pressures from Green groups/councilors. Our scenery and precious land resource and ecology would be sacrificed.
- The proposed asset classification for permitted rate of return is not realistic and has not been adopted in any other countries. It is complicated to classify existing equipment in the fixed assets of power companies. It would rather increase unnecessary administrative cost and bureaucracy.
- The proposed permitted rate of return as low as 7 % is considered not attractive for power companies which invest huge amount in power generation and distribution equipment with long payback period. Without a reasonable rate of return, it would weaken the financial status of the power companies to make future investment or to upgrade/replace the existing non-environmental-friendly equipment.

Best Regards,

M. Chu

Dear sir,

Comment on Consultation Paper Stage II on
Future Development of Electricity Market in Hong Kong

I want to express my opinions here

1) I really do not want to see the joining of the electricity supply network in Hong Kong with that in the Mainland. Who is responsible if there are faults in between? I do not want to live without electricity supply for several years just to argue who is responsible for the fault.

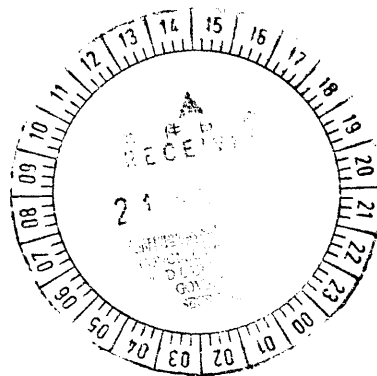

2) Geographically, it is difficult to develop solar or wind power plants in Hong Kong. It is also not very practical to develop it as in the coming 6 years the target was only 1-2% of all the power coming from substantial development. Encouraging such an impractical target means discouraging the companies from doing practical work, which is totally unreasonable.

3) It is also not reasonable to reduce the period of SCAs into 10 years. This will seriously affect the power plants because contracts signed by the plants will need to take a higher risk.

I do hope the above points are seriously reconsidered.

M.H. Chau

對中電電力市場未來
的發展，第二階段諮詢文件

本人對諮詢文件的意見，

1. 當局能在不須考慮可行性的情況下，單方面設定減排標準。
2. 電力行業屬長遠經營行業，其資產壽命往往長達三十年或以上，此建議未有考慮這些特點。
3. 政府建議將回報率大幅減7%至4%，我們估計此舉會令股東價值削減至50%。

Dear Sir,

電力市場第二階段諮詢

電力與市民的日常生活和社會的經濟發展息息相關，而可靠穩定的電力供應是香港的一個重要的競爭優勢。貴局今天的諮詢對電力市場影響深遠，我作為香港市民的一份子，希望藉此機會，表達以下的意見供貴局參考。

在第二期諮詢文件中貴局建議將投資回報率由現時的13.5%大幅降低至7-11%，令投資者難以獲得足夠的投資回報，阻礙電力公司作長遠的投資，最終會損害供電的可靠性。此外，貴局要縮短與兩電的協議年期由15年減少至10年。我認為協議年期過短會令兩電承擔巨大的投資風險，引致減少投放資金在電力基建上。這樣會影響香港的經濟發展，更削弱香港的競爭力。

如果電力公司不獲得保證可以取回成本及取得准許利潤，在現存管制模式可提供的穩定性會消失。故此我認為貴局在釐定電費方面的建議是不恰當的。

電力基建規劃需較長的時間，在 2008 年後電力市場的規管模式和能源政策仍未清晰之前，貴局要求電力公司承諾達到特訂的減排目標，並且提出將回報率與排放總量上限掛鈎的懲罰性機制，這樣做對電力公司並不公平。

其實，在現時的空氣污染管制法例下，如果電力公司不能達到排放目標要受到處罰，如准許回報因減排表現欠佳而再調低，這樣是對電力公司「雙重懲罰」，這個建議實在欠缺公允。

Subject: Comments on Stage II Consultation Paper of Electricity Market in Hong Kong

Urgent Return Receipt

Dear Sirs,

After reading the Stage II Consultation Paper on Electricity Market in Hong Kong, I found that a lot of information were missing in supporting the suggestions put forth by the Hong Kong Government. Personally, I believe in reasonable control of the two electric companies to protect the interest of the general public, However, a rough consultation paper like this not only! would this lower the image of the Government, it also makes it difficult to convince the general public our Government is doing a proper job to study the whole situation in a all-rounded manner. List below are some of my queries:

On one hand, HKSAR Government keeps stressing the importance of exploring Renewable Energy sources and also admitted that the cost of doing so is quite high, on the other hand lower the permitted rate of return from 13.5% to a range of 7-11%. Such rate is so low that almost any reasonable investment vehicle with lower risk and shorter term of investme! nt can generate this rate of return. What kind of incentive to give to the investor of the two electricity companies to do research and explore on the RE area with such low rate of return on investment?

The Paper seems to try to equate between competition and better service which, to my opinion, is not necessary true. When market is open up for more competition, giving the same level of demand, this would mean more competitors fighting for the same pie. In order to gain new and retain existing customers, insensible price cutting could result.&nbs! p; This happened in newspaper sectors, telephone companies, mobile phone companies and so on. With such unpredictable income, do you think investor would be willing to make infrastructure type of investment? They would only concern about short-term profit, rip the immediate benefit as much as possible. Without proper investment on the hardware and infrastructure, this market-opening policy would ultimately harm the end-consumer as stability of electricity could be jeopardised.

I sincerely hope that our HKSAR Government wou! ld be more realistic in dealing with forcing an unreasonable rate of return to the investors of electricity companies and to force opening of the electricity market. You would be working against your belief of helping the public.

M. Kwan

Subject: Comments On Stage II Consultation

Urgent Return Receipt

Dear Sir,

After reading the Stage II Consultation proposals, I would like to have some comment as follows :

1. The Stage I consultation indicate that reliability and safety of electricity are of the utmost important. The "New Supply Sources from the Mainland" will not be a reliable supply as refer to the past record. The conditions will not be improved in the coming years. I think most of the people in Hong Kong would like to pay more in the tariffs in return of high reliability and safety supply of electricity.

2. It is not justified for the extensive use of RE because the high cost of RE will be eventually passed to the consumers.

Thanks for your attention.

M. Leung

Dear Sirs,

My views on Stage II Consultation on Future of Electricity Market are as below.

Return based on average net fixed asset was preferred. Return based on different types of assets was not preferred. For long term investment in power industry, 7-11% of return was not sufficient to attract investment.

Bilateral agreement between the Government and the power companies is preferred. Ten years regulatory period with an option to extend for another 5 years was not suitable for long term investment.

Tariff including costs and permitted return can ensure enough investment, reduces operation and investment risks and facilitates the Government's oversight on tariff setting. The setting up of a fuel clause account with fuel cost borne by consumers can help to stabilize tariff. The setting up of a fuel clause account with fuel cost borne by consumers can reduce operational risk.

The supply in Guangdong, China is already very tight and this supply may greatly affect the supply reliability in Hong Kong as the reliability there was so bad. Allowing third company to use the existing grid in Hong Kong will lower the reliability of supply and blur the responsibility on supply reliability. Provision of interconnection between CLP Power and HKE may add in tariff pressure while there will be very limited benefits. It may not be able to provide choice of suppliers to Hong Kong users.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: 網上行動回應《香港電力市場未來的發展》

Urgent Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

M Rossiter

經濟發展及勞工局局長：

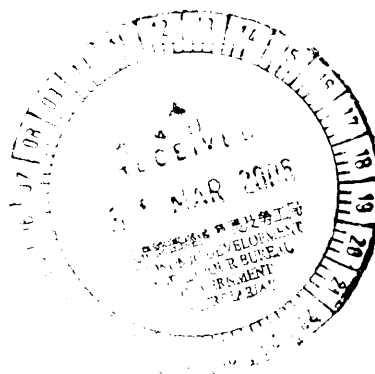

您好！

根據兩電提供的資料，香港的電費雖比鄰近地方如中國內地、台灣和星加坡為高，但這些地方的電力公司乃國營企業或是得到政府的補貼。因此在客觀上，電費的高低應以其佔家庭的支出作出比較，而在香港，電費只佔其百份之二，比起交通或燃料(石油氣或煤氣)多年的升幅，電費在利潤管制協議下是否過高呢？正由於香港人口稠密，高樓大廈林立，以及香港作為亞洲的金融中心，供電的可靠性不容忽視。投資電廠及網絡項目的建造及營運，動以億元計。所以合理的回報及年期是投資者重要的考慮。政府不應為了順應政黨的要求，破壞了多年來建立的關係。若電力市場最終不能持續發展，香港又怎可成為國際大都會。

Subject: Important of a stable supply of electricity for Hong Kong
 Urgent Return Receipt

Dear Government officials,

I am one of the low class citizens living in Hong Kong. After reading several articles in your discussion forum, I would like to share some of my views with all of you.

The negotiation on the future development of electricity market has caused fierce confrontations between some government officials and the local Electric Companies over the past few months. It seems to me that these officials are just trying to do something under the immense pressure from the public but perhaps against their own wills. They themselves know very well that introducing a new competitor within a short period of time is almost out of the question. In addition, forcing power companies to reduce their profit return will only put investors away. It is clear that Hong Kong prosperity builds on a free trade environment. Any interference of such activities will inevitably do more harm than good to the society of Hong Kong.

In my opinion, the best way for them to do at this moment is to ignore those unreasonable demands and keep everything unchanged. Only by doing this can Hong Kong continue to enjoy a stable supply of electricity.

Regards,

M.S. Wong

Subject: 香港電力市場未來發展意見
 Urgent Return Receipt

經濟發展及勞工局局長:

香港在回歸之後爭拗特別多,最近比較熱門的爭拗有「西九」項目及教育改革,結果前者被推倒,後者教統局需要「出招」紓教師壓力.可見政府處事未能三思而後行.結果浪費公帑作出彌補.

香港於七、八十年代供電的穩定性是不及現在的,經常在嚴熱的夏天沒有電力供應,沒有風扇及沒有電梯而需行樓梯回家的情景真是苦不堪言.至今兩電經過多年的改良,供電的穩定性已高達99.999%.香港人除了要求減費外,又有否注意到這點嗎?

在環保方面,有一些事情實在「啼笑皆非」,例如:渣打馬拉松有本地選手死亡,政府及環保團體等直指兩電排出污染物影響所至.最可笑的是,即使香港空氣受污染,並不代表是毒氣.而部份香港人被誤導而信以為真.要求兩電控制污染物,甚至要求減電費及回贈等,實對兩電十分之不公平.

環保是全球大細所趨的事,中電亦打算減少用煤發電,而引入天然氣;港燈已建立了風力發電站及在《2005香港工商業獎:環保成就》獎勵計劃中獲獎,可見兩電對環保也不遺餘力.

環保需要不少的資金,現政府提意將兩電應可利潤削減至最低的7%.試問如何可以做好環保,不加電費的同時能確保供電穩定呢?這些是否所謂「又要馬兒好;又要馬兒不吃草」.

香港作為亞洲金融中心,穩定的供電是不可缺少的一環.希政府審慎考慮作出能達到雙贏局面的方案.

Subject: Views on Future HK Electrical Market

Dear sir/madam,

I'd like to submit my views on "Future Development in the Electricity Market in Hong Kong regarding the Stage II Consultation.

I prefer the development of electrical market to be unchanged until there are sufficient measures to ensure the stability of power supply at the present level.

The main reason is to ensure that both residential and especially commercial sectors will not be affected by any supply instability because of the change. This is important for an international city as HK. It is also important for the business here to ensure the prosperity.

Nevertheless, the rate of capital returns and the terms of agreement should be negotiated among the shareholders, government and the public to compromise their interests.

As environmental concerns are calling for much attention and for the best of public health, I'd suggest the government to urge the power producers to improve their machines and fuel for better environmental protection.

Regards,

M WH Chan
HKIE Member no.

環保問題

現時空氣污染日益嚴重,甚至乎連國內壞空氣都吹進本港,所以本人亦希望供電商能研究多些再生能源,來減低空氣污染.

現時本港供電商已研究並採用風力及太陽能發電,進行這些研究是需要運用很多資源,然而隨便減低回報率或更改檢討年期,會使電力公司在資源不足情況下,令研究進度緩慢或會終止.

請當局就環保問題上與供電商認真商討.

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

 Urgent Return Receipt

致經濟發展與勞工局：

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來的電力市場，能夠加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我建議：

1. 電力公司的准許回報率需與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 各項減排設施（如二氧化硫脫除裝置）的開支與成本不能轉嫁給消費者；
3. 可再生能源的投資可享有較高的准許回報率；
4. 制訂減少燒煤的目標和時間表；
5. 設立能源管理局，統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

祝好

Dear Sir,

Electricity Market Stage II Consultation
Mitigation of Air Pollution

I would like to express my views with respect to the proposals related to mitigation of air pollution as bellows.

The Government proposes to give the highest permitted rate of return to renewable energy system. I fully support this proposal because it can encourage the power companies to have more renewable energy projects, which can help improving the air quality.

However, for the emissions reduction facilities, the proposed permitted rate of return is the lowest in the proposal. I worry that, with such a low level of return, power companies will be discouraged to invest in this kind of projects. There will be great impacts on air quality in the long run.

In order to help the mitigation of air pollution, the Government should encourage the power companies to reduce emissions by offering sufficient financial incentive at least at the same level as that for renewable energy projects.

Yours sincerely,

Ma Siu Hung

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. Dear Sir,

I would like to express my views on the Stage II Consultation proposals.

I think that the proposed 7-11% permitted rate of return is too low and the 10-year regulatory agreement is too short. With the new proposed regulatory requirements, the power utilities may reduce their long-term investments. Without adequate investment in electricity infrastructure, the electricity supply reliability will deteriorate and we will suffer from power interruptions. This will seriously affect both our daily life and our economy.

Yours faithfully,

Ma Yin Ling

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Ma Yun Shun

Dear Sir/Madam,

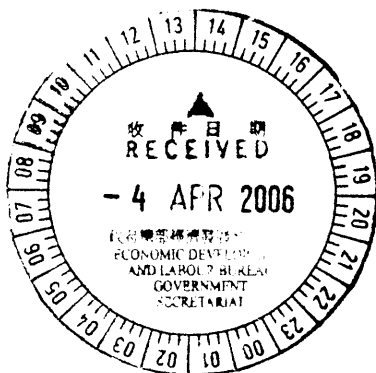

Comment on Future RE Invested By Power Companies

According to the Consultation Paper II, I object to have future RE investment by power companies in Hong Kong.

As higher electricity tariffs would be resulted from the higher cost of RE and as stated in the paper that topographical constraints and limitations exist in Hong Kong for the application of RE, further discussion on medium scale development of RE in Hong Kong and emission trading are not suggested.

Yours sincerely,

Ma Yun Shun

致葉局長:

回 應 第 二 階 段 電 力 市 場 檢 討 諮 詢 文 件

就政府現正進行的電力市場檢討, 本人希望以作為一間中小企業人身份來表達一點意見, 供貴局作參考。

本人認為電力是社會的重要基本設施, 而一穩定而又可靠的供電系統遠比較盲目追求廉價的電力供應重要。回顧在現行持之以恆的電力監管制度下, 電力公司正為香港市民提供可靠而合理的電力, 而且他們亦願意花費金錢研究再生能源的開發及應用, 為環境保護、減低污染上作出貢獻。

諮詢文件倡議將現有制度改變, 包括開放電力市場, 引進競爭者; 減低電力公司的准許回報; 縮短電力公司的專營權等..., 均只會令電力供應的投資者變得短視, 只著重眼前利益而拒絕花費金錢作研究沒有利潤可圖的減費或環保設施, 長遠而言只會令社會得不償失。

在商言商, 電力系統設施屬長遠而龐大的投資, 若沒有可預見的合理利潤及穩定的前景, 試問又有那間公司願意作長遠投資?

再者現今社會重視環境保護, 節省能源, 故電力開支實可在調節用量中控制。與其引入其他供應商為電力市場增添不明朗因素, 令市民蒙受停電的風險, 不如鼓勵電力公司多作環保建設及教育, 共同建設更美好居住環境。

謝謝!

Subject: Response to Consultation Paper on Future Development of the
Electricity Market in Hong Kong

Urgent Return Receipt

30/03/2006 19:46

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: We want clean air!

Urgent Return Receipt

23/03/2006 14:30

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Madeleine Thompson

Dear Sir,

Electricity Market Stage II Consultation

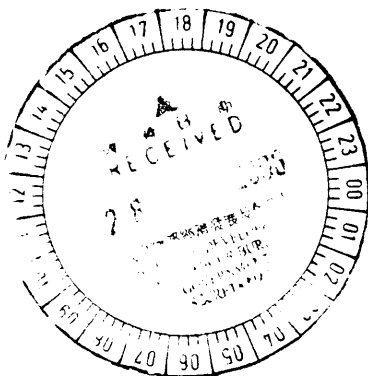

I have serious concerns about the proposal of having electricity tariff adjustments approved by the Government. I worry that reasonable and well-justified tariff adjustments, which are based on commercial business operating principle, will not be approved or postponed by the Government under political pressure. This will obviously tarnish Hong Kong's free economy image and will deter further investment in electricity infrastructure.

I would therefore recommend the Government not to adopt the tariff approval proposal.

Yours faithfully,

Magdalene Chan

Main & East Wings,
Lower Albert Road,
Central, Hong Kong.

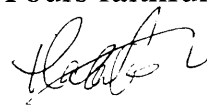

Dear Sir,

In response to your consultation on the development of the electricity market in Hong Kong after 2008, I would like to share with you on the following comments:

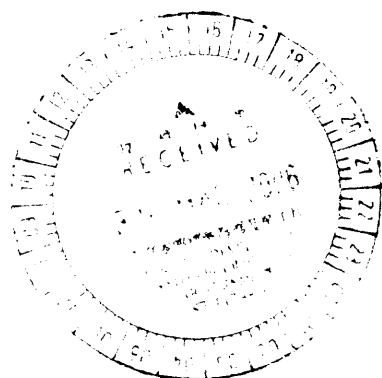

Since most of the power companies' assets have long asset life and it takes a long time for the power companies to earn their permitted returns, the government's proposals in reducing the power companies' rate of return to 7-11% and shortening the regulatory period to 10 years increase the power companies' investment risks enormously. The power companies may not be interested in investing in their power supply facilities anymore. This in turn will decrease the highly reliable power supply which Hong Kong people are enjoying nowadays.

I hope that we can enjoy the high standard of power supply reliability after 2008. As the current regulatory framework for the electricity market is effective in doing so, let's keep on using it in the post-2008 regime.

Yours faithfully,

Maggie Chan

Electricity Market in Hong Kong

Urgent Return Receipt

I am school nurse in HK and have daily contact with students and staff affected adversely by the pollution we are all exposed to in HK. Since arriving in HK 9 years ago I have noticed a significant rise in allergic responses in adults and children. If I had young children of my own I would not remain in HK in order to protect my child's developing lungs. Research shows that the level of pollution we are exposed to everyday permanently damages these vulnerable tissues as they develop. Please act to protect us all.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Future Development of the Electricity Market in HK
Stage II Consultation

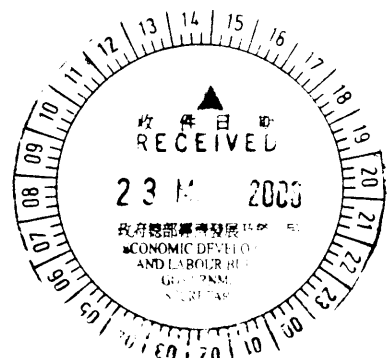

Dear Sir/Madam,

Below is my input on the Stage II Consultation:

- Electricity is our daily necessity; therefore we should rely on a trust worth company such as Hong Kong Electrics or China Light and Powers. I do not prefer for the market opening and falls onto an unreliable and inexperienced company.
- To be fare and favorable to the electric company since this is a huge investment, the duration of SCAs shouldn't be too short, 15 years is an acceptable term.
- Since the 2 electric companies have a huge rate of return. Therefore the current rate of return 13-15% must reduce or link to economic indicators.
- It is a long term investment/business, the electric companies, even with lower return rate, they should try their best to meet the Hong Kong's environmental improvement goal and be a responsible company.

Very truly yours,

Maggie Li

27 March 2006

Economic Development and Labour Bureau
2/F., Central Government Offices, Main & East Wings
Lower Albert Road, Central
Hong Kong

Dear Ip,

Opinions on Stage II Consultation

As a Hong Kong citizen and electricity user, I wish to express my opinions on some Government' s proposals in the Stage II Consultation Paper.

Government should be very cautious with their proposal to lower the permitted rate of return from 13.5% to 7-11%. But there is no justification for the rate of return of 7-11% in the consultation paper. The 7-11% return is considered not enough to attract the huge and long-term investment for building a reliable electricity system. Government must give the power companies sufficient incentives to invest. Otherwise, there will be no new fund injected into the electricity infrastructure and our high level of supply reliability will be deteriorated.

The government has proposed a shorter 10-year regulatory period. Electricity infrastructure has long life and is capital intensive. It is considered that the proposed 10-year regulatory period is too short because it has only 10 years of certainty to earn a return. With the regulatory period shortened to 10 years, there will be increased investment risk for the investors. I support that the 15-year regulatory period as adopted in the past should be maintained after 2008.

I request the Government to evaluate the proposals more carefully in the Stage II Consultation Paper and Government will seriously consider my views.

Yours sincerely,

Maggie Lo

Subject: My comment for Stage 2 Consultation

Urgent Return Receipt

Thanks for arrangement for this Stage II consultation on this important subject and provide us opportunity to voice out some of our concerns.

Congratulation, Hong Kong is ranked as number one again among all free market economy countries and cites by an economic journey recently. Less Government interference to the economy is the main reason to retain this honor.

Investors investing on power companies should entitle to earn permitted return on investment projects as approved by the Government, otherwise the regulatory regime would become meaningless if the costs and permitted returns cannot be adequately protected.

The right to earn an agreed permitted return on investment is very important for investors to assess risks of their investments. If permitted return is dictated by the Government and no conditions for approval have been clearly spelt out or the decision is based on other considerations such as undue political pressure, and this will constitute to a very dangerous precedent case for Government to interfere with operation of privately owned companies, and risks borne by investors will be increased unfairly.

I don' t oppose prices being determined by the State as those in planned economy countries. But for the electricity industry in Hong Kong, the electricity tariff should be determined by the power companies, that is based on agreed terms and conditions.

Maggie

Dear Sir,

Future Development of the Electricity Market in Hong Kong
Stage II Consultation

We are a printing company established in Hong Kong in 1986. Our business requires 24hours – 7 days non-stop production operations. Since uninterrupted electricity supply is vital to our business operations, we would like to express our views on the Stage II Consultation of Future Development of Hong Kong's Electricity Market.

We have the views that the proposed 7-11% permitted rate of return is too low and the proposed 10-year regulatory period is too short. We are afraid that the reduced financial incentive and the tightened regulatory requirements will cause the power companies reducing investment in their power supply equipment and facilities. Without adequate long-term investment, this will inevitably deteriorate the existing electricity supply reliability.

美力（柯式）印刷有限公司
MAGNUM (OFFSET) PRINTING CO., LTD.

As our business needs non-stop production, we cannot afford any power interruptions in our operations. We hope the Government will kindly consider our views in the consultation process.

Yours faithfully,

For and on behalf of
MAGNUM (OFFSET) PRINTING CO. LTD.

局長先生：

本人藉第二階段諮詢，表達有關減低回報率的意見。政府近日暗示兩電在零八年的准許回報率將降至8%或以下，這個做法存在危機。

回報率降低，打擊兩電投資意欲，延遲改革系統，減少長線計劃等變數，可減慢本港大型機建；系統老化，供電穩定性降低，增加停電機會。

本人認為應以穩定性為前題，維持現狀較為實際。

致經濟發展與勞工局：

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來的電力市場，能夠加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我建議：

1. 電力公司的准許回報率需與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 各項減排設施（如二氧化硫脫除裝置）的開支與成本不能轉嫁給消費者；
3. 可再生能源的投資可享有較高的准許回報率；
4. 制訂減少燒煤的目標和時間表；
5. 設立能源管理局，統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

祝好

CLP HOLDINGS HONG KONG

13th March 2006

The Secretary,
Economic Development and Labour Bureau,
2/F Central Government Offices,
Main & East Wings,
Lower Albert Road, Central,
HONG KONG.

Dear Sir/Madam,

Future Development of electricity market in Hong Kong
Stage 2 Public Consultation

In response to the Government Stage II consultation process, I, the undersigned, would like to put forward my opinion and comment as a shareholder of CLP Holdings for your kind consideration.

While fully agree with the Government's objectives of providing a safe, reliable supply of electricity at reasonable cost with low environmental pollution, there are certain areas in the proposal that I find it impossible to agree:

1. The Return of 7-11% is too low and the duration of the Regime of 10 years is too short

Investments in the provision of electricity calls for enormous capital expenditure investment that entails significant risk when the duration of the regime is too short. On the other hand, when the Regime is prolonged to at least 15 years, the risk and the cost are reduced accordingly.

Over the past 8 years, CLP Holdings has kept tariff unchanged; in addition there have been rebates totally HK\$3 billion. There has been an annual investment of 6 billion each year. During the 8-year period, the price of coal has increased many folds.

The drastically lowering of return would unfairly cut shareholder value by 30-50%.

2. Environmental pollution objective

The greatly reduced environmental pollution objective entails enormous cost. The use of gas instead of coal would increase cost by 30% and would endanger the reliability of supply.

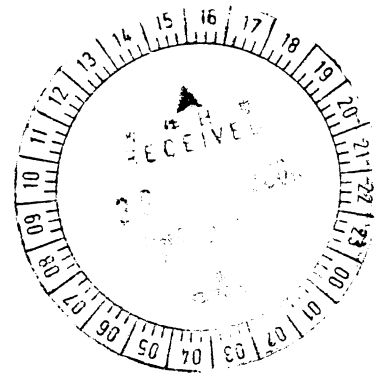

In my opinion the Government should carefully discuss with CLP Holdings so as to determine what level of pollution is desirable, commensurate with the cost and thereby strike a balance between these two factors rather than fixing a penalty cause, without giving the reasons for such stipulation and without discussion with CLP Holdings.

3. The interests of the shareholders, the stake holder (Exxon, USA) and the employees of CLP Holdings should be protected.

Electricity accounts for only 1.3% to 2.7% of the monthly household expenditure in Hong Kong. Dramatically reducing the tariff via the cutting of the permissible return from 13.5 to 15% to 7-11% would benefit the public to a very small extent, whereas the shareholders would sustain a loss of 30-50% in terms of dividend and share value. CLP Holdings profit on electricity investment in Hong Kong increases only by 3.8%, and as only around 60% of the profit is distributed, much of the retained profit is utilized in maintaining the current standard of electricity supply. On the other hand, other household cost, e.g., rental, cost of purchasing a flat accounts for a much higher proportion. There are, of course, simple methods by which such cost could be reduced, but such measure would hurt the interest of the land developers. I, therefore, see no reason why the Government should so unjustifiably jeopardise the interest of CLP shareholders, so as to benefit the public by such a small extent.

In this connection I would also like to add that offices in the Central rental increase in rental as much as 70%, and yet the Government has not taken any action, even though such hectic rise would be detrimental to the investment atmosphere in Hong Kong.

香港中環下亞厘畢道
中區政府合署中及東座二樓
經濟發展及勞工局

葉澍堃局長：

香港電力市場未來的發展 第二階段諮詢

本人是香港電燈集團的股東，欲就貴局正進行的第二階段諮詢提供意見。

管制計劃協議一向行之有效，數十年來公司一向以合理電價為客戶提供安全可靠的電力供應，並在環境保護方面表現出色。因此，管制計劃協議其實已成功落實政府制定的電力政策目標。

閣下在諮詢文件中提出的以下建議，本人並不贊同：

10年規管協議年期： 電力基建涉及長達數十年的投資週期，規管協議年期不宜過短。請維持現時15年的協議期。

調低准許回報率至7-11%： 諮詢文件建議7-11%准許回報率，沒有提供任何論據支持。建議的回報率過低，不能接受。

以資產類別訂定不同的回報率： 以資產類別訂定不同回報率的做法，令規管機制複雜化，會引起不必要的爭拗，亦會增加行政成本。現時以單一准許回報率為基礎的規管協議簡單而清晰，應該保留。

雙重減排罰則： 現行的空氣污染管制法例已訂下超越排放上限的罰則，若建議電力公司未能達減排目標又再被扣減回報率，則變成雙重懲罰，對電力公司不公平。

所有電費調整都必須得到政府批准： 電力公司應有權利就政府已批准的投資項目賺取准許回報，未來規管若容許政府全權決定可否調整電費，則容易受制於政治壓力，增加投資風險。

未來規管安排，不應為變而變。請考慮延續現行規管模式。

二〇〇六年三月四日

(MR.) MAK KING HANG

(MAK) MAK KING HANG.

Economic Development and Labour Bureau,
2/F., Central Government Offices,
Main & East Wings, Lower Albert Road,
Central, Hong Kong

Dear Sir,

Stage II Consultation on the Future Development of the Electricity Market in Hong Kong

As a shareholder of the Hongkong Electric Holdings Ltd., I would like to express my views on the following 5 key proposals outlined in the Consultation Paper.

1. The Regulatory Period Should Remain 15 Years

The proposed 10+5 year regulatory period is actually for 10 years. It is too short for huge and lumpy investments in 30-35 year service life assets to recover costs and to earn reasonable return.

2. The Permitted Rate of Return (ROR) Should be Sufficient to Incentivize Investment

The proposed 7-11% ROR is far too low and not commensurate with risks of the power industry. It cannot attract huge and long-term investments required.

3. The Proposed Asset Classification Should be Discarded

The proposed 4-tiered ROR arrangement for different asset classes is counter-productive in solving the air quality problem. Besides, it unnecessarily complicates the return issue, and increases bureaucracy and administration costs.

4. Emission Penalty Should be Fair and Reasonable

The proposed emission penalty mechanism which links return with emission target is a double penalty. It is unfair and unreasonable.

5. The Existing Tariff Adjustment Mechanism Should be Maintained

The proposed requirement of Government approval for annual tariff reviews will subject our legitimate return under the agreement to undue political pressure.

As an investor of the Hong Kong's power industry, I am proud to have helped deliver safe and reliable electricity supply, together with exemplary environmental performance, at reasonable price in the past decades under the Scheme of Control Agreement. I trust that you will give due recognition to the proven effectiveness of the Agreement when mapping out the way forward for the electricity market. I also hope that my views will be considered and reflected in the ongoing consultation exercise.

Yours faithfully,

MAK KING HANG

Attn: Mr. Stephen Shu-kwan Ip

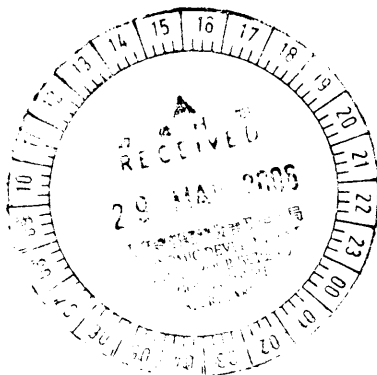

Future Development of the Electricity Market in Hong Kong

Dear Mr. Ip,

I appreciate the Government's effort in preparing the consultation paper for the future electricity market development. After reading your consultation paper, I am pleased to give my comments on the consultation paper.

I hope the Government could reconsider the appropriateness on reducing the rate of return from the present level of 13.5% down to 7-11%. The rationale is that the proposed rate of return is too low to attract sufficient investment in the electricity supply industry. Besides, the proposed 10-year regulatory period will further hinder the continuous investment in the industry. I have concerns if the power company would have adequate incentive for continuous investing in the electricity infrastructure after 2008. If they do not continue to invest, the reliability of supply will degrade. In my view, the regulatory period should be 5 years while the rate of return should be maintained at 13.5%.

I hope my views are constructive and can help you to formulate the future policy on this subject.

Yours faithfully,

Mak Wai Yi, Bernice

Subject: Comments on Stage II Consultation
 Urgent Return Receipt

Dear Sir,

Having read the stage II consultation document, I have following comments for your consideration:

The short regulatory period of 10 years can hinder investment. The investment in electricity generation and transmission equipment is of capital intensive, long depreciation period and non-movable nature. Ten years cannot be an incentive for investment as the ROI is not assured especially the document is proposing possible new supply sources from the Mainland post 2018.

Mainland has her own problems in electricity generation and transmission. With reference to Mainland's economic development trend, shortage in power supply would still persist in the coming 10 years. The time lag between planning and completion of power generation / transmission projects, intensive capital investment and fast economic growth are the factors. I don't think any of the Hongkongers would expect Mainland to undergo negative economic growth for the benefit of Hong Kong.

Hong Kong people must manage Hong Kong until 2047. We should solve our problems and not ask Mainland to assist us once we encounter any problems. If environmental is a concern, imports electricity from Mainland is just to transfer the environmental problem to Mainland. This thinking is problematic and not fair to our Mainland people.

Therefore, we should encourage the power section to invest in the higher performance and less pollution generating equipment. Hong Kong People can demonstrate a good role model to our Mainland people on this. We should contribute and lead in this issue especially for Hong Kong and our neighboring areas. Hong Kong is surrounded by many high pollution cities; therefore, to import electricity from other area is just to bury head in sand. Proactive and endurant are Hongkongers' character!

To encourage investment, we should have a good and long term scheme. A longer regulatory period, preferably more than 15 years with reasonable ROI is required. The ROI under the current Scheme Of Control is justifiable in view of social commitment and acceptable tariffs as compared to the other types of investment.

Thanks and regards,

Mak Ying Hong

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.
7. There are companies in the US which have developed a method of turning land-fill into oil and gas, shouldn't we be looking at these alternatives to dumps and incineration?

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Hong Kong.

Dear Sirs,

**Stage II Consultation on
Future Development of the Electricity Market in Hong Kong**

The direction to more environmental and economical power sources is undeniable. Yet I have reservation on the measures raised in the Stage II consultation report.

A reliable power source meeting the environmental and economical expectation will not exist in an unstable market environment. From what we have achieved in Hongkong's economy in the past decades, I have beliefs in the capability and expertise of the two existing power companies. The direction to more environmental and economical expectation shall be achieved by: -

1. A good balance in the duration terms of the agreement with the rate of return. It is ridiculous to expect a quality supply at a low rate of return over a short period of time simultaneously.
 - I suggest that the general rate of return to be reduced slightly and progressively while the period to be extended to 15 years or even longer to encourage sustainable power companies like a partner to our economy.
 - I support higher return allowable under a regular review mechanism as incentive for green power innovation, etc.
 - I support cut in return under a regular review mechanism as incentive for surplus power generated, etc.

2. I do not support introduction of power sources from Mainland at this stage in view that environmental awareness is still low in the Mainland.
 - Introducing power sources from Mainland will simply shift our own localized pollution problem to others.
 - Increased power generation in Mainland's suppliers with lower environmental concern simply mean increasing pollution in the region, in Mainland and the World as a whole.
 - Pollutants in Mainland have been proved to affect ourselves eventually as pollutant migrates.

3. I support the set-up of regulatory authority but the regular review mechanism shall not be too frequent to avoid unnecessary intervention to business under the market mechanism. The least government control encourages the most competitive business to survive.
4. I do not support interconnection between the two existing companies. Interconnection imposes technical and commercial complication and may yet discourage competition as we only maintain two power companies in such a small city.

Yours faithfully,

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

25 March 2006

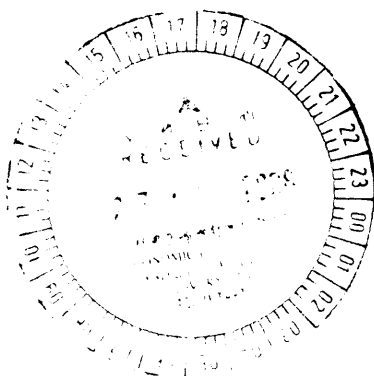

Economic Development and Labour Bureau
2/F., Central Government Offices,
Lower Albert Road, Central

Dear Mr. Secretary,

Stage 2 Public Consultation
on Hong Kong Future Electricity Market

Please find below my response to your captioned consultation:

I do not consider the proposed different rates of return, all of which in the range of 7% - 11% sufficient to attract continuous investment needed for the electricity infrastructure in Hong Kong. First of all, no reasons have been given in the Consultation Paper as to how the range of rates of return has been derived. Furthermore, the setting of different rates for different targets does not only complicate the calculation but also increase administrative costs of all parties. For the healthy growth of the electricity supply industry in Hong Kong, I think it is imperative to provide a reasonable and fair return to the power companies to ensure that we will continue to enjoy their highly reliable electricity supply services after 2008.

Yours sincerely,

Man Pui Shan

27 March 2006

Economic Development and Labour Bureau,
2/F., Central Government Offices,
Main & East Wings,
Lower Albert Road, Central,
Hong Kong.

Dear Sir,

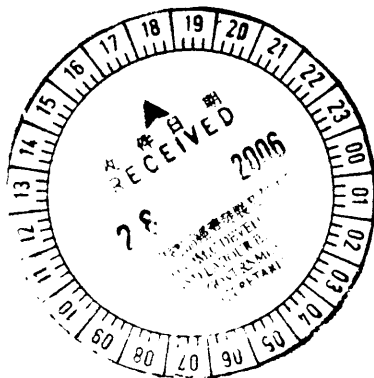

**Consultation Paper on Future Development of the Electricity Market in Hong Kong
(Stage II Consultation)**

I write to express my comments on Hong Kong's electricity market after 2008.

People living in Hong Kong should be proud that the reliability of power supply in Hong Kong today is of excellent standard, and the highly reliable power supply is expected to continue after 2008. Regulations for the future electricity market should provide an environment which allows the power companies to continue to do so.

In particular, I found that there are two proposals made by the government which would vastly decrease the power companies' incentives in their future investments. The first such proposal is decreasing the power companies' rate of return from 13.5% to 7-11% and the second one is shortening the regulatory period from 15 years to 10 years. If the proposals were adopted, the power companies would most likely reduce their investments in their facilities as these investments may not have any return after the next regulatory period. With the investments in the power supply facilities decreased, the reliability of power supply would inevitably be affected and we won't be able to enjoy the high standard of power supply we are having today after 2008.

As the existing regulations for the electricity market have been proven effective for many years, I hope the government can continue to use them after 2008.

Yours faithfully,

Man Shuk Han

Subject: Comment on Stage II SOC

Urgent Return Receipt

Dear Sir,

With reference to the stage II consultation on SOC, I am disappointed on the Government's proposal as follows,

1. Open Market

I disagreed to plan to open the electricity market in HK in next future. HK is a well developed and small market. Any new comers will face great difficulty to develop its own plant and network in HK. If Government force the existing companies to open up its network, someone have to pay a great compensation to the electric companies on it. In the experience of telecom, the compensation will come from Government, in other word from our pocket.

On the other hand, it is not sure if there is any gain even when the network is opened up. Will the reliability, environmental performance, safety, service, can be up kept? Will the customers in remote area, where new network should be set up, can be still satisfied?

If I am the CEO of the new comer, the target customer will be the big commerical companies like MTR, KCR, etc, which have high and stable electricity demand. The one in remote area, who I have spent a lot to build network, will be surely rejected. You can see some areas in Sai Kung still be not covered by the mobile telecom network for years, despite the mobile telecom market is an open market and there are many service providers in this market.

Further, if there are new comers and they build their plant and network. As a result, the reserve capacity as a whole will be greatly increased. A lot of resource will be wasted. I note that the Government plans to merge MTR and KCRC. One of the reasons is to maximize the resource and reduce the unnecessary duplication of service. Government consider the merge is good to HK people. But why not the Government plan to built one more railway that overlap MTR and KCRC, if competition = BETTER SERVICE = LOWER TARIFF = GOOD TO HK PEOPLE.

2. Rate of return / contract period

I do consider the 7 to 11 % of rate of return + a 10 year contract is not attractive enough for investors to invest in the electric market with following reasons,

The investment in electric companies is mainly in construction of power plant and transmission network. The life of these equipment would be 20 to 30 years. If the plant is built but the Government terminate the contract 10 years later, the investment will be wasted. On the other hand, the return rate is low and the investors can only get back part of the investment. Further, to increase tariff will be much difficult in future due to political

pressure. If I was the investor, I would have rather put my money into the bank, as least, I could have got back my money with interest 10 years later.

From the above, you can see that the existing electric companies will be likely limited their investments. So, what will happen 10 years later when the equipment got aged and can not fulfill the requirement in that time? Will there be system breakdown or even blackout?

3. Reliable Electricity Supply

As a HK people, I care my spending on the electricity, but I do care more about my earning. If the change of SOC will result in a better economic growth and create wealth in HK, I do agree the change. Will open market and leak of electricity equipment investment will result in a more reliable electricity supply that leads HK growth?

In Stage I consultation, a lot of feedback highlighted their concerns on the electricity supply reliability. However, in stage II consultation, I cannot aware the Government's determination in maintain a high reliable electricity supply in HK, which is quite disappointing.

4. Only way to reduce tariff?

I agree that Government has a role to fight for us for a lower tariff. But, are lower the rate of return / environment performance punishment on the electricity companies the only way to achieve it?

I suggest the Government should take a leading role to discuss with PRC to ask for fuel with a lower cost. In PRC, the fuel cost is fixed by the Government. So, the electricity companies in PRC can get fuel in a cost much lower than the market price. If HK Government, works with HEC & CLP, to discuss with PRC and get fuel with a lower price, the electric tariff will be reduced. It will be a (HK People) win - (Government) win - (Electric companies) win result.

Please feel free to contact me if you have any inquiries on my view point.

Regards.

「親愛的葉局長：

我支持香港和中國發展風能 – 希望你與我們一起推動潔淨能源的革命！身為香港市民，我非常關心空氣污染和氣候變化，並希望能夠選擇潔淨的能源。

根據特區政府2002年的顧問報告，香港具有龐大的風力資源。與香港接壤的廣東省，同樣擁有豐富的風力資源，廣東省是2004年全國第四大的風能裝機容量的省份。去年全球風能裝機容量超過8000兆瓦，為1900萬歐洲家庭提供電力。單是風機製造就能帶來80億歐元的生意額。當化石燃料（如煤、石油、天然氣）面對愈來愈大的市場價格與供應不穩，威脅本地消費者與需求時，風能是最具商業前景的能源選擇。

特區政府必須為可再生能源的發展制定時間表與政策，這才是與世界並進的表現。當特區政府與兩電的《管制協議計劃》將於2008年屆滿，特區政府有責任提供更多市場誘因，推動可再生能源的發展，如固定電價、強制購買等。

subject: 香港電力市場的未來發展第二階段諮詢

Enquiry: 政府應該把電力公司專利年期縮短

穩定性及可靠性的電力是應該的，也不必與回報13.5%掛鉤，難道沒有13.5%回報就沒有可靠性電力供應？難道回報率10%以下就常常停電？希望港府盡快開放電力市場，給市民多選擇電力公司

應該把電費稍減，順應市民。

Subject: 我要清新空氣
 Urgent Return Receipt

致經濟發展與勞工局：

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來的電力市場，能夠加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我建議：

1. 電力公司的准許回報率需與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 各項減排設施（如二氧化硫脫除裝置）的開支與成本不能轉嫁給消費者；
3. 可再生能源的投資可享有較高的准許回報率；
4. 制訂減少燒煤的目標和時間表；
5. 設立能源管理局，統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

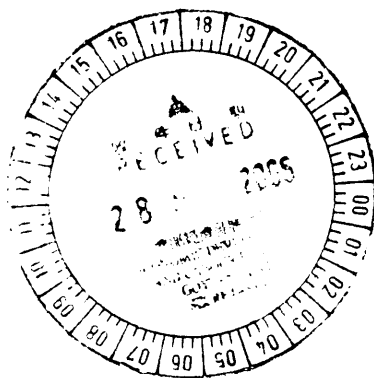

祝好

mandy kwok

就政府剛發表的《香港電力市場未來的發展》第二階段諮詢文件，本人意見如下：

政府在第二階段諮詢文件中建議新協議年期從現在的 15 年縮短至 10 年。本人認為此舉會增加投資回報風險，令借貸利息成本上升。本人擔心可能會令電費上升，故本人贊成沿用現時 15 年的協議年期。

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Comment on Future Development of Electricity Market in HK -
Stage 2 Consultation
 Urgent Return Receipt

Dear Sir,

I would like to submit comment and personal view on the Stage 2 Consultaion for Future Electricity Market in HK. Document as attached.

Thanks for your attention.

Regards,
Mandy Leung

comment on stage 2 consultation.doc

Comments on Future Development of the Electricity Market in HK - Stage II Consultation

I would like to offer comment on the subject:

Scheme of Control and Rate of Return

- The suggested 7-11% rate of return classified by asset is a significant cut to the current 13.5-15% level. Scheme of Control has been in place for years, supply reliability in HK has been improving and so far, local power companies has managed to maintain tariff at affordable level. This has proved the control mechanism has been working quite well, and outcome exactly aligns with government's policy objective, the need to initiate a big change is not justified.
- Supply reliability is a crucial factor to sustain development in HK, general public understands this fact and it is welcomed by overseas investors. But supply reliability comes at cost, when it is at top priority in government's policy objective, the policy itself should also support incentive for power companies to invest.

Emission Targets

- Fuel diversification is important to secure reliable electricity supply. Reliance on single source of clean fuel supply is impossible. On the other hand, land scarcity and high land cost make development of renewable energy expensive. While extensive supply from renewable is impossible, environmental target has to be achieved by reducing emission from existing coal plants. Government should welcome investment on emission reduction facilities with reasonable incentive, so why the lowest rate on return to disincentive investment instead.

Renewable Energy

- Understand that development of renewable energy bears social responsibility, but renewable energy, by nature in self, is intermittent and difficult to be relied on without backup.
- High cost and backup requirements are important issues that worth consideration behind the scene set for clean and environmental friendly supply

New Supply Sources and Grid Access

- All market players should bear the same supply reliability, safety and environmental standards and commitment. Regulation should be in place to ensure no 'cherry-pick' and 'burden-shift' by any new supplier.
- Clear and fair market rules are necessary for grid access and technical considerations play important part here. Without jeopardizing the performance of grid supply, additional investment is necessary for reinforcement, government shall set clear demarcation for such responsibility. In the end, the cost is to be born by users.

Market Competition

- In an effort to grow subscribers and expand market share at initial stage, immediate price cut may be achieved, but there are examples to show the behavior over time is difficult to be long lasting. At time when limit to growth approaches, it will just reverse. There are lots of lesson learnt from overseas competitive markets
- The power industry is highly capital intensive and technical limits come quick, room for enjoying price cut is very limited. Again, decision to alienate new subscribers or expand services depends on incentive to invest.
- The HK market is too small for fair competition
- Without clear arrangement to address the above issues by the government, plan for transition become unrealistic.

6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I find it hard to fathom that a city like Hong Kong, with its highly educated workforce and huge capacity for entrepreneurial spirit can't be shown, by simple legislative measures, the way to cleaner air. If the government levied taxes on fossil fuels that incorporated their true costs in terms of greenhouse gas emissions, Hong Kong people would "vote with their feet"; we would see a drastic change in terms of the types of energy used by the average citizen very quickly. If the government then initiated even mild subsidizing of research, development and use of renewable energy, Hong Kong would quickly not only become one of the cleanest cities in the world, but a world leader in the application of this technology. Which would then lead to exporting of services to other nations.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air while also promoting our people's entrepreneurial spirit.

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution which is damaging the health of all Hong Kong people, including my family. As a Hong Kong citizen, I am embarrassed to show tourists our beautiful sights, as it is often impossible to see them through the pollution.

I demand that the government enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;

6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

We are already aware of many people who are choosing other destinations to visit rather than Hong Kong, due to the polluted air, and believe that unless something is done in the near future, the attraction of visiting Hong Kong will be severely compromised.

We therefore cordially demand the SAR government to bring us back the blue sky and a breath of clean air, and ensure that Hong Kong may take its rightful place as Asia's World City.

Subject: 網上行動回應《香港電力市場未來的發展》

Urgent Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: My son wants clean air!

Urgent Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Marc Harvey

Electricity Market in Hong Kong

Urgent Return Receipt

I came to Hong Kong in 1994. Most days were filled with beautiful blue skies and breathtaking skylines. I remember how polluted Bangkok was in comparison. Now it is the other way around. Bangkok is cleaner air than Hong Kong.

We do not use international standards for pollution, but rather ones that are "created" in Hong Kong. The pollution indexes are out of control. I beg you to do something.

Hong Kong has the potential to be one of the greatest cities in the world again, but it has become one of the most polluted places to live.

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Future Development of the HK Electricity Market - Stage II
Consultation

Urgent Return Receipt

To Whom it may concern

With regards to the recent consultation paper on Hong Kong's Electricity Market, I would like to express the following viewpoints from the perspective of a HK resident that was born here and is going to live here for many more years to come.

I am particularly concerned on importing RE from the Mainland in the future. Although it may introduce economic benefits, my concern is the introduction of pollution to the environment could cost more than economic benefits we see. Until this concern is addressed, I would suggest maintaining the current way of electricity supply.

Furthermore, we are now enjoying the highest reliability of electricity supply in the world, introducing new RE would reduce investment incentives from existing suppliers and may introduce the risk of lowering the reliability.

Subject: 我要清新空氣

Urgent Return Receipt

致經濟發展與勞工局：

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來的電力市場，能夠加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我建議：

1. 電力公司的准許回報率需與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 各項減排設施（如二氧化硫脫除裝置）的開支與成本不能轉嫁給消費者；
3. 可再生能源的投資可享有較高的准許回報率；
4. 制訂減少燒煤的目標和時間表；
5. 設立能源管理局，統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

祝好

Subject: 網上行動回應《香港電力市場未來的發展》

Urgent Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

另外，我回家一向要乘搭一程電車，在銅鑼灣上車，天后下車。有時真不願乘電車，因為車站就在馬路中央，廢氣污染得很嚴重，乘客就像吸塵機。就算走在街上，也快撐不住了，街道很擠，又窄，巴黎的馬路不是這樣窄的，車的廢氣堆到市民的面上去。我發現香港人男的女的都開始脫髮，臉上長滿暗瘡，這是表面的病，至於五臟六腑有沒有被污黑呢？我想也是吧。

Subject: Stage II Consultation Paper on the Future Development of
Electricity Market in Hong Kong

Urgent Return Receipt

Dear Sir,

My comment on this consultation paper is as follows.

First, let us ask ourselves. Are the power companies giving us a good service? If yes, I think it is reasonable to let them earn a reasonable profit.

In my opinion, the two power companies are providing an excellent service to us. There is no point to squeeze the power suppliers to death.

Are the power companies earning excessive profits? It looks so when we simply consider the billions of dollars in the annual return of the two power companies. I think a lot of companies are jealous about their earnings. However, is a maximum return of 13.5% excessive? I don't think too many people can say 'yes'!! While this is a good return in less prosperous days, the two power companies are not allowed to enjoy a higher return in those good days. They can only stare at the 20+%, 30+%, 100+% profit earned by the other companies. Did the power companies complain they had earned less? Let's be fair.

I therefore support

- keeping the existing rate of return for the two power companies
- tiered ROR is ridiculous and should not be adopted
- linking the ROR to environmental performance is unnecessarily complicated
- the existing arrangement of renewing the scheme of control every 15 years is also reasonable for such a huge investment.

Thank you for your attention.

Yours faithfully,
Margaret Chung

27 March 2005

Economic Development and
Labour Bureau

2/F Central Government Offices

Main & East Wings

Lower Albert Road

Central

Hong Kong

Dear Sir or Madam

I wish to stress one point in particular, which may be overlooked in your Consultation. This is the treatment of emissions control equipment. Coal-fired generation of electricity will remain an important element of power supply for many years (except in a very few areas exceptionally favoured with other resources such as their own hydro or gas). Emissions control will thus be a necessity for the health of our planet and our populations - both in terms of the systems to control sulphur and nitrogen oxides and particles, which are well known but need rapid extension of their use, and in terms of the new systems to control carbon dioxide emissions which are being successfully demonstrated in pioneering countries like Denmark. You should therefore take care that returns on emissions control equipment in your policy should encourage its installation and not discourage it.

This will benefit Hong Kong and its people directly, and will also contribute more generally in giving valuable lessons and pilot projects for emissions control on the Chinese Mainland (with its particularly heavy dependence on coal)

[PTO

While writing, may I also mention two other areas where careful planning is vital in spite of the difficulties it may encounter

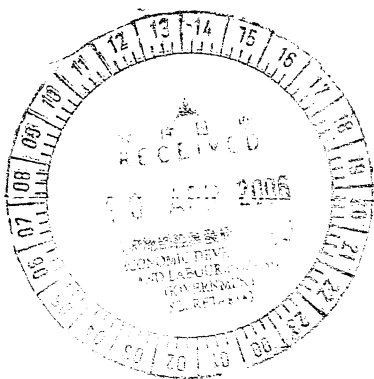

- the development of a competitive market requires great care to avoid confusion (as with overhasty opening in the UK, which France now risks repeating) and to avoid damage to the whole electricity market by letting in companies which want short-term profits without adequate long-term investment.
- environmental target planning needs great care to set targets which are both forward-looking and achievable.

I hope this letter will reach you in time to be considered in your planning and I wish the Review Board well for its task.

Yours sincerely

D. Margaret Parkinson

CLP shareholder
(in my family since my father worked for CLP in the 1930s)

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: 我要清新空氣

Urgent Return Receipt

致經濟發展與勞工局：

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來的電力市場，能夠加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我建議：

1. 電力公司的准許回報率需與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 各項減排設施（如二氧化硫脫除裝置）的開支與成本不能轉嫁給消費者；
3. 可再生能源的投資可享有較高的准許回報率；
4. 制訂減少燒煤的目標和時間表；
5. 設立能源管理局，統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

祝好

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: 我要清新空氣

Urgent Return Receipt

致經濟發展與勞工局：

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來的電力市場，能夠加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我建議：

1. 電力公司的准許回報率需與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 各項減排設施（如二氧化硫脫除裝置）的開支與成本不能轉嫁給消費者；
3. 可再生能源的投資可享有較高的准許回報率；
4. 制訂減少燒煤的目標和時間表；
5. 設立能源管理局，統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

祝好

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

經濟發展及勞工局

葉澍堃先生：

對電力市場未來發展第二階段諮詢文件的意見

閱讀過政府剛公佈的第二階段諮詢文件後，本人想發表意見如下：

1. 十年協議年期

政府建議的十年協議年期，在電力市場並不實際。電力基礎設施投資龐大，回本期長，縮短協議年期會令投資者失去投資信心，減少對電力基建的投資，對香港未來電力的穩定性，有負面影響。

2. 7-11%回報率

香港通脹慢慢回升，對於需要龐大資金投資的電力基建而言，7-11%的回報率並不吸引。電力公司會因此而減少投資，進一步影響供電可靠性。

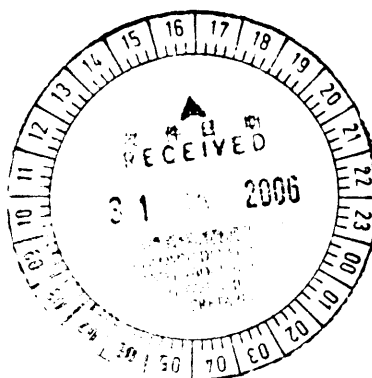

3. 7%減排設施回報率

政府一方面想電力公司增加減排設施，以改善香港的空氣污染問題，但另一方面又把電力公司減排設施的回報率定於最低的 7%，道理何在？這樣低的減排設施回報率，相信不能提高電力公司對安裝更多減排設施的興趣，使香港的空氣污染問題不能進一步改善。

以上小小意見，請參考。

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Stage II Consultation on Electricity Market
 Urgent Return Receipt

Dear Sir,

I strongly object importing electricity from Mainland. This is a selfish and immoral act.

1. Mainland still has power shortage problem. If part of the electricity is transferred to HK, it will affect their economic growth and the living of their people. This is immoral.
2. The power plants in Mainland will create much more pollution than the power plants in HK for generating same amount of electricity. Hence, we will create much more pollution globally. This is selfish.
3. Importing electricity from Mainland means that HK enjoy the electricity with no pollution in HK (??) but creating severe pollution in Mainland. This is a selfish.
4. The Government Officer has just stated in the TV program last evening that CLP should not sell electricity to Mainland as it create more pollution in HK. However, in the consultation paper, it propose to import electricity from Mainland. What dose it mean? It only means that it is okay for us to create pollution in Mainland but not the other way round. This is immoral and selfish.
5. Finally, I just want to remind everyone that HK will eventually suffer from the pollution created in Mainland as we are just beside Mainland.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

To Economic Development and Labour Bureau,

I was born in Vancouver, Canada and moved to Hong Kong 5 years ago for the boundless opportunities and favorable tax rate. It was until I started hiking on the skirts of Shek O and Tai Tam and sailed through the waters that I truly fell in love with Hong Kong's beauty.

Unfortunately, as the years go by I too have noticed the higher frequency of smog and pollution in the air. It is this reason that is leading me to consider moving back to Canada - away from the pollution. This is a shame. As it is a common view shared between my friends and colleagues, both within the expatriate and local communities.

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I believe that there is still time to improve our air condition and strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;

Subject: Clear the Air.

Urgent Return Receipt

To: Economic Development and Labour Bureau

I am HK born and raised, and love HK for it's spirit of endurance, adaptability and wonderful community as well as all the other things that makes HK so special. Hong Kong has always been a safe and healthy place to live, run by a government whom we felt really did the best for the community as a whole. However, in the last decade, with air pollution rising to such high levels, we have become increasingly shocked at the inaction of our government to put measures into place to combat the worsening air quality, treating it as a low priority. My husband, children and I are now considering leaving our home here, primarily due to the toxic nature of the air we breathe. We feel we are killing ourselves and our children by staying in HK.

I am not a scientist and I do not know the complete nature of the cause of this much pollution, however I see very little being done about it, other than from focus groups bring more awareness to our community. The government seems to "kow tow" to big companies, by perpetuating the relaxed rules of conduct regarding conservation measures. We can no longer accept this for ourselves.

I wholeheartedly support the campaign for clean air. If there is anything to be done, we must start NOW, and we are prepared to accept the costs involved. We do not want to leave our home.

I herewith copy the letter issued by the organizers of the campaign, and add my signature to it.

Marilyn Lobo Simon.

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. To protect my health, and the health of my family, I demand that the Government enhance the control of air pollution due to the power generation, under the future electricity market. This "future market" must not become the pretext for power companies to escape their social and environmental responsibilities to protect.

I recommend:

1. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be transferred to consumers;
2. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
3. An investment in renewable energy should earn an even higher level of permitted rate of return;
4. An Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
5. The targets and time-table for reduction of coal burning should be set;
6. Cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.
7. Demand management must be built into the profits of the company. There must be a mechanism where they profit if they can significantly reduce energy demand. At present they only profit from increased demand.

I demand that the SAR Government bring back clean air to Hong Kong. I and my family need a breath of clean air.

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Subject: 網上行動回應《香港電力市場未來的發展》

Urgent Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Lower Albert Road, Central
Hong Kong

Dear sir,

Subject : Views on Stage II Consultation

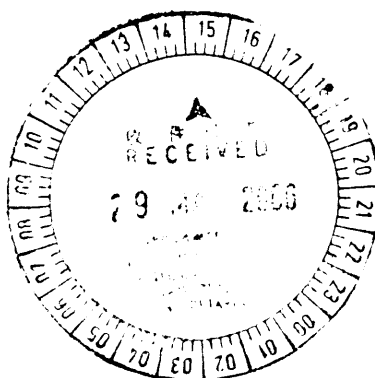

In the Stage II consultation paper, I am glad that the government can fully recognize our concerns on electricity supply reliability. We treasure the current high supply reliability and would like to protect it at all costs. Therefore, I would like to ask the government to review the following issues seriously before proceed any further negotiation with the two power companies.

1. Open electricity market for competition is not meaningful and not practical in Hong Kong.
2. Relying on China's power supply will endanger our reliability level and import pollution indirectly.
3. Sufficient and reasonable return should be provided to power companies to induce their investment continually in power infrastructure. Setting the return too low will just cause under-investment which jeopardizes our reliability in the long run. To be safe, we should maintain the current rate of return as we have sufficient evidence to prove that it is adequate in the eyes of investors.

Yours truly,

Maris Wong

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Mark Armstrong

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by both power stations and the uncontrolled levels of traffic on the roads of Hong Kong. I have lived in Hong Kong for many years and had planned to make it my home. However, since I am now starting a family I have strong reservations about raising children in an environment that would be damaging to their health and mine. The Hong Kong government could be a "leading light" in sustainable methods in Asia. Focusing on reduction of pollution through clean energy production and recycling. Instead, at present, it appears to be happy to "fiddle as Rome burns". If the Hong Kong Government does not value the health of its citizens, perhaps the decrease in revenue due to many of its concerned citizens leaving to find cleaner air might stir and the added budget for treatment of respiratory related disease might stir this government into action!

I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Hong Kong

Dear Mr. Ip,

Electricity Market Development in Hong Kong
Stage II Consultation

With reference to your Stage II Consultation on the captioned subject, I would like to make some comments.

Under the existing regulatory regime, there is seldom power interruption in Hong Kong and I have been enjoying reliable electricity at a reasonable price. I agree with the Government that reliability of electricity supply is of paramount importance and the policy objective should focus on maintaining reliability.

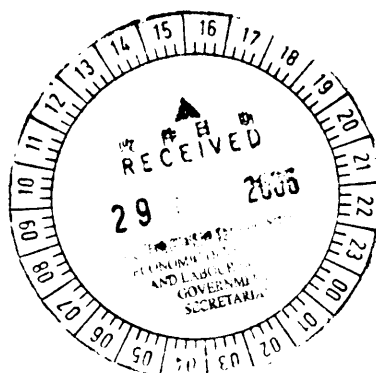

I have concerns about some proposed changes in the consultation paper such as permitted rate of return reduction and shortening of the regulatory period. I am afraid that the reduced financial incentive to the power companies and the more tightened regulatory requirements might lead to insufficient investment in electricity infrastructure, and might thus affect supply reliability.

I suggest the Government to evaluate the proposals in the consultation paper with caution, so that Hong Kong will continue to have adequate and reliable electricity supply.

Yours sincerely,

Mark Lam

26 March 2006

Economic Development and Labour Bureau
2/F., Central Government Offices
Main & East Wings
Lower Albert Road, Central
Hong Kong

Dear Sir,

Future Development of the Hong Kong Electricity Market

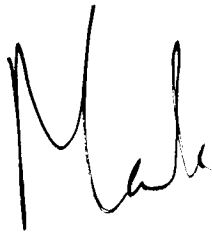

I am aware that you are seeking public opinions on the future development of the electricity market and would like to give my views for your consideration.

I find your proposal to lower the allowed rate of return for the power companies by 20-50% (from 13.5% to 7-11%) risky. This obviously will not provide adequate motivation for the power companies to invest. In longer term, this probably will affect the reliability of electricity supply to be enjoyed by Hong Kong people. Sufficient rate of return, in my view similar to the present 13.5%, should be allowed to attract the huge and long-term capitals required by power companies.

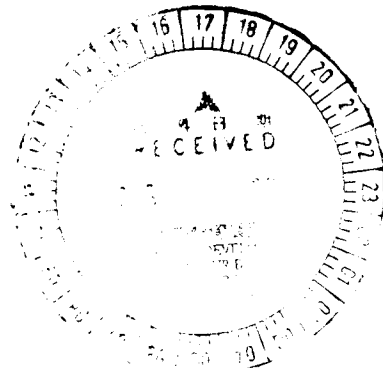

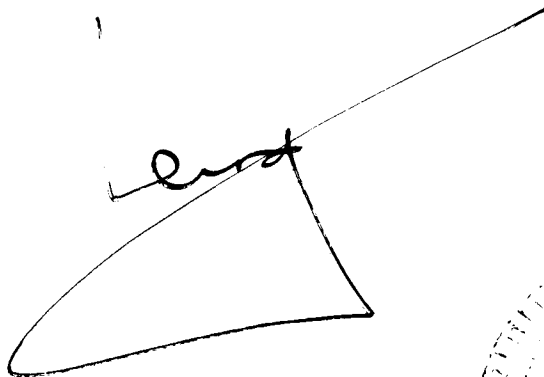

In addition, I would like to comment on your proposal to shorten the regulatory period. I understand this arrangement will greatly increase the risks of the power companies and again affects electricity supply reliability.

Please reconsider the above proposals and ensure Hong Kong will have reliable and adequate electricity supply in future.

Yours faithfully,

Mark Leung

Hong Kong

Dear Sir:

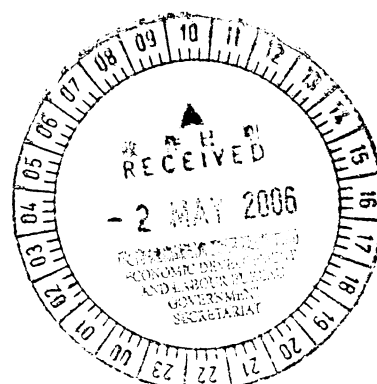

**RE: Stage II Consultation Paper on Future Development
of the Electricity Market in Hong Kong**

We see that there are increasing risks to the electricity regulatory system in Hong Kong. The current Scheme of Control has proven to be far superior to perhaps any other system in the world in providing safe and reliable electricity supply to Hong Kong. A safe and reliable electricity supply cannot be taken for granted. As I travel around the world, I have found poor government regulatory systems have led to inadequate power supply investments, inefficient power generation and distribution and poor customer service. One of the most frequent problems that I have seen is that there are not enough incentives for companies to make the necessary power supply investments. Another problem is that there are not enough legal safeguards to ensure that tariff adjustments are not subject to the whims of politicians. If Hong Kong is to continue to enjoy a safe and reliable electricity supply, the city should avoid repeating the mistakes made by other countries.

Best regards,

Mark Mobius

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Subject: 堅持“以合理的價格，提供穩定可靠的能源供應”的原則

Urgent Return Receipt

31/03/2006 01:13

堅持“以合理的價格，提供穩定可靠的能源供應”的原則 謝煥星

開門七件事：“柴米油鹽醬醋茶”，“柴”是第一件。現代都市的“柴”是能源，而電力則是最主要的能源之一。香港的電力是一種價廉物美的東西。據統計，我們用在電力上的開支平均占收入的1.7%，這點開支為我們帶來滿室光亮，帶來冬暖夏涼，帶來烹調的樂趣，帶來視聽的悠揚……一句話 – 帶來現代化的享受。

可是有人仍認為香港的電費太貴。其實，誰不希望用更少的錢辦更多的事呢？只是“巧婦難為無米炊”，如果電力公司為了降低成本，不更新設備，不細緻檢修，那將有什麼後果呢？有朝一日，地鐵在隧道中不進也不出，電梯在半空中不上也不下，醫院的手術燈突然熄滅，銀幕上漸入佳境的畫面變得一片黑暗……如果你是當事人，你有什麼感覺呢？你會怪電力公司，電力公司則怪政府，政府怪議員，議員怪市民，怪來怪去怪自己。

也有人說香港的空氣質素太差，必須管制電力公司排放廢氣，不錯，規管是必要的。但不能把空氣污染的責任全推給電力公司，籠罩著香港的那一片灰濛濛的“煙霞”(懸浮粒子)，難道是從踏石角和南丫島飄出來的嗎？銅鑼灣和旺角的污濁空氣也來自電廠嗎？如果把內地和汽車所產生的環境污染的帽子套到電力公司的頭上，嚴加處罰，最終消費者也逃不了變相交排污費的厄運。

小弟在這裡並非為電力公司鳴冤叫屈，也不是支持電力公司無理加價，而是呼籲廣大市民在幫助政府制定政策的時候，要以大局為重，從長計議，才能保持香港的經濟長期繁榮，社會和諧進步。

總之，既然政府、市民和電力公司都同意“以合理的價格，提供穩定可靠的能源供應”這項原則，我們就應該坐下來，擺事實，講道理，如何叫做“合理”，怎樣保證“穩定可靠”，認真把問題弄清楚，達致一個“讓市民開心，讓投資者放心，讓政府安心”的三贏方案。

**Comments on Stage II Consultation on the
Future Development of Hong Kong's Electricity Market**

Dear Sirs / Madam,

Marsh (Hong Kong) Ltd. is a wholly owned subsidiary of US-based parent Marsh, Inc. We are engaged in Risk and Insurance services and provide transactional and consulting services to both multinational and domestic corporations. We have been in Hong Kong for over 30 years. Reliability of power supply is very critical to the success of any business and we would like to air our views concerning the development of the electricity market in Hong Kong.

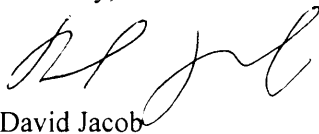

We have always enjoyed the excellent supply and reliability of electricity in Hong Kong compared to other Asian countries. The consistent supply has been vital in providing a competitive advantage to Hong Kong and in it's growth for the future. Reliability must not be compromised.

As respects the Stage II Consultation in progress, we support the Government's policy to safeguard the consistent supply of electricity to the public; however, view that certain areas of the proposal, such as shortening of the regulatory agreement period and lowering of the permitted rate of return, may not be contributing to this objective.

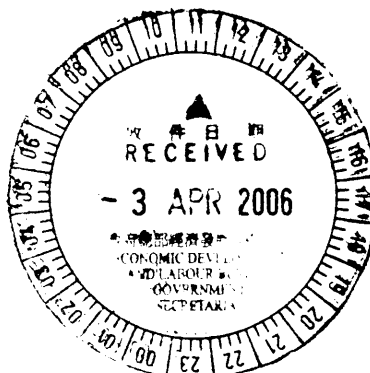

These proposals may reduce the utility companies' incentive to invest as rate of returns may no longer provide the incentives needed and may adversely affect supply reliability. To safeguard the consistent flow of electricity, we consider that the Government be more cautious towards the aforesaid proposals.

We hope you will consider our views and keep any changes to the present regulatory regime to an absolute minimum.

Sincerely,

David Jacob

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Urgent Return Receipt

致經濟發展與勞工局：

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來的電力市場，能夠加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我建議：

1. 電力公司的准許回報率需與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 各項減排設施（如二氧化硫脫除裝置）的開支與成本不能轉嫁給消費者；
3. 可再生能源的投資可享有較高的准許回報率；
4. 制訂減少燒煤的目標和時間表；
5. 設立能源管理局，統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

祝好

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong resident, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am VERY concerned about ALL air pollution in Hong Kong. As a business owner employing 7 staff, I am seriously considering re-locating my firm to Singapore primarily because of the quality of life implications associated with continuously breathing heavily polluted air in Hong Kong. How bad must it get before the Government takes SIGNIFICANT steps to cut pollution?

I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;

Subject: 我要清新空氣

Urgent Return Receipt

致經濟發展與勞工局：

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來的電力市場，能夠加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我建議：

1. 電力公司的准許回報率需與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 各項減排設施（如二氧化硫脫除裝置）的開支與成本不能轉嫁給消費者；
3. 可再生能源的投資可享有較高的准許回報率；
4. 制訂減少燒煤的目標和時間表；
5. 設立能源管理局，統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

祝好

Martin Siu

Lower Albert Road, Central
Hong Kong

Dear *Sho*

**Stage II Consultation on
Future Development of the Electricity Market in Hong Kong**

I understand the Government has launched the Stage II Consultation on the captioned subject. As a shareholder of the Hongkong Electric Holdings Ltd., I would like to express my views on the proposed arrangements contained in the Consultation Paper.

Regulatory Arrangements

1. First of all, I agree that the current institutional setup with economic, safety and environmental regulation by various Government bureaux and departments should be continued and that the economic regulation should be most effectively carried out by a bilateral agreement signed between the Government and each of the power companies.
2. However, I cannot agree with the proposed shorter 10-year regulatory framework. Given the long-term investment cycle of electricity infrastructure and contractual commitments (e.g. the liquefied natural gas take-or-pay contracts), investors of the power companies must be provided with a sufficiently long regulatory period so that they are willing to continue to invest.
3. In order to attract further capital investment, I strongly urge that the regulatory period be maintained at the current 15 years. If not, a higher return rate should be introduced in order to reflect the increased risks faced by the power companies.

Permitted Rate of Return (ROR)

4. The Consultation Paper proposes, without given any justifications, a 4-tiered ROR in the range of 7%-11% for different asset types. My view is that the proposed ROR is too low to attract the huge and long-term investment required by the power industry. Given the industry-specific risks faced by the power companies, a higher ROR is required to cover the challenges and non-diversifiable risks in the electricity market.
5. In addition, I do not see any logic in the proposed 4-tiered ROR arrangement which I believe should not be adopted. Instead, the existing arrangement of a single ROR for all asset types should be maintained as it is straightforward and simple. If the cost of raising capital for an asset is the same, be it for electricity generation from renewable or non-renewable sources, electricity delivery or emission reduction, the ROR should be the same.

Emission Reduction

6. I also find the proposed emission penalty mechanism, which links ROR with emission reduction performance, totally unacceptable. Given the nature of electricity supply infrastructure which requires long term business planning, the absence of a clearly and fairly defined post-2008 regulatory framework, would be difficult for the power companies to meet the emission caps.

7. In fact, the proposal will subject power companies to a “double penalty” as there are already provisions under the Air Pollution Control Ordinance penalizing them for failing to meet emission caps imposed by the Government.

Tariff Setting

8. For tariff setting, I consider the proposed Government approval required for tariff setting unreasonable. If there is no guarantee for the power companies to recover their costs and permitted returns, the certainty of the regulatory regime will be completely undermined.

9. While I agree with the setting up of a Tariff Stabilization Fund, I find the asymmetric nature of the proposed Fund an undesirable feature. A more balanced and flexible arrangement is to allow a debit balance for the Fund.

New Supply Sources

10. I fully share the Government’s view that the future development of our electricity market should not be predicated on supply from the Mainland. As CLP is still supplying huge amount of electricity to Guangdong, I wonder how the latter can export power to Hong Kong in the next few years, not to mention the reliability of such export. You may have aware that the Mainland is still facing shortage of power supply problem. From time to time especially during summer, the government gives short notices to the factories in the Mainland to suspend power supply. Shopping malls are also being ordered to limit their use of electricity, failing which the government would order the mall to close. The unstable and unreliable supply of power in the Mainland greatly affects the business operations in the Mainland. If that happens to Hong Kong, I am sure that the competitiveness of Hong Kong being an advanced commercial city would greatly be hindered. Given the current situation I wonder whether the Mainland could support Hong Kong in the near future. In fact, given the vital importance of an adequate and reliable supply of electricity to Hong Kong, I have grave concerns about the introduction of any new supply sources, which may not bring in benefits to electricity users.

As an investor of Hong Kong’s power industry, I am proud to have helped build one of the most adequate and reliable electricity supply systems in the world. I trust that you will give due recognition to our past achievements as you map out the way forward for the electricity market. I also hope that my views will be considered and reflected in the ongoing consultation exercise.

Yours faithfully,

Martin So

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: 網上行動回應《香港電力市場未來的發展》

Urgent Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

**Stage II Consultation Paper on Future Development
of the Electricity Market in Hong Kong**

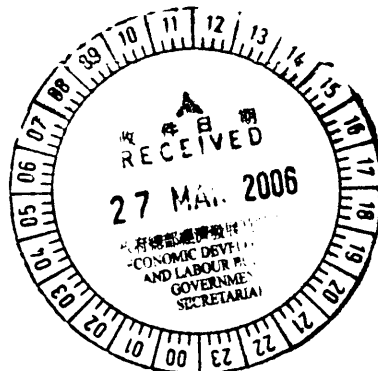

Dear Sir,

After reading the Stage II Consultation Paper, I would like to express my views as a Hong Kong resident. Generally, I am comfortable with the existing arrangements that have served Hong Kong well. I think there has been sufficient investment in our power infrastructure to maintain the high standards of reliability and security of electricity supply. I do not support any changes to the current regulatory framework that could put the current reliable services at risks.

To encourage the long term and consistent investment in the power industry in Hong Kong, I think it is sensible that the regulatory framework should be for a comparable long period, say 15 years, to enable a reasonable return to the investors.

Yours faithfully,

Mary Hse

Section B

2.10 Interconnection with Guangdong

With the continued shortage of power supply vs demand in China, in particular the slow reaction to increasing power supply to handle the restriction of usage in certain southern China provinces, the reliability and responsiveness of the power grid to consumer demand for power in mainland China is questionable. Thus, the proposed interconnection with Guangdong with the aim to import electricity into Hong Kong needs to be assessed very carefully in terms of electricity reliability and stability, considering the fact that Hong Kong people are all very used to a stable and reliable supply of electricity.

2.17 Usage of renewable energy

It is well known that the cost of renewable energy (to maintain reliable and stable electricity supply) is higher than conventional energy. I strongly agree that financial incentives should be provided to encourage the development of such source of energy. Otherwise, no investor will be interested in developing this source of energy. Apart from considering financial incentives, HK government needs to also consider the proportion of renewable energy vs conventional energy and whether mandatory usage of such can be implemented to support such industry. In addition, I am also concerned about which party will need to bear the additional financial cost (eg. government or consumers).

Section C Proposed regulatory arrangements – tariff; regulatory body

Tariff mechanism should consider the following:

- providing sufficient incentive to encourage sufficient investment to ensure supply stability and reliability; as a consumer, supply reliability is considered to be more important than mere reduction of electricity tariff
- avoid power companies investing in excess capacity, thus passing extra cost to consumer
- setting up a strong regulatory body with sufficient industry knowledge to liaise and monitor the business of the power companies is very important

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong permanent resident, I am very much concerned about the air pollution caused by the power stations. I strongly demand that the government enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

29 March 2006

Economic Development and Labour Bureau,
2/F., Central Government Offices,
Main & East Wings,
Lower Albert Road, Central,
Hong Kong.

Dear Mr. Ip,

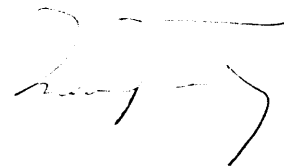

Comments on the Future Development of Hong Kong's Electricity Market

After reading the consultation paper on the future development of the electricity market in Hong Kong, I have the following comments to make:

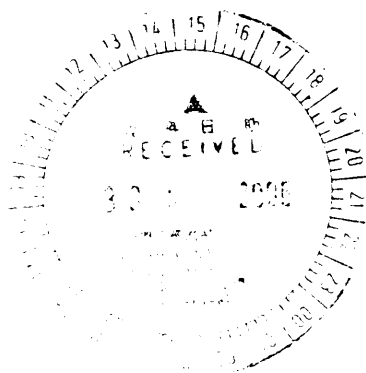

If the government proposed to reduce the permitted return of the power companies to 7-11% and shorten the regulatory period to 10 years, the power companies would most likely reduce their investment plans on their facilities because the two proposals greatly increase their investment risks. As the reliability of power supply greatly depends on the investments the power companies made in their facilities, the two proposals would have a negative effect on the world-class power supply Hong Kong people are enjoying today. In order to ensure that the reliability of power supply can be maintained after 2008, the government should give enough incentives in their future regulations to the power companies so that they will continue to invest in the power industry of Hong Kong.

I hope the government can appreciate my comments in planning for Hong Kong's future electricity market. Thank you.

Yours faithfully,

Mary Tung

Urgent Return Receipt

Against the 10-year regulatory period with an option to extend for another 5 years will be too shortly for the long term nature of the investment cycle and contractual commitment peculiar to power industry because the investment for power industry is very larger, so only 10-15 years is not enough to get any feedback or profit for the investment, therefore, the company will investment less to reduce their risks, finally, the quality and standard of the supply of electricity will be lower.

Subject: Clean Air ACT - Thank you
 Urgent Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. To protect my health, and the health of my family, I demand that the Government enhance the control of air pollution due to the power generation, under the future electricity market. This "future market" must not become the pretext for power companies to escape their social and environmental responsibilities to protect.

I recommend:

1. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be transferred to consumers;
2. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
3. An investment in renewable energy should earn an even higher level of permitted rate of return;
4. An Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
5. The targets and time-table for reduction of coal burning should be set;
6. Cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.
7. Demand management must be built into the profits of the company. There must be a mechanism where they profit if they can significantly reduce energy demand. At present they only profit from Increased demand.

I demand that the SAR Government bring back clean air to Hong Kong. I and my family need a breath of clean air.

Subject: 我要清新空氣

Urgent Return Receipt

致經濟發展與勞工局：

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來的電力市場，能夠加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我建議：

1. 電力公司的准許回報率需與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 各項減排設施（如二氧化硫脫除裝置）的開支與成本不能轉嫁給消費者；
3. 可再生能源的投資可享有較高的准許回報率；
4. 制訂減少燒煤的目標和時間表；
5. 設立能源管理局，統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

祝好

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: We want clean air!

Urgent Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

matthew and amber long

Subject: 網上行動回應《香港電力市場未來的發展》

Urgent Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: Stage II electricity market
 Urgent Return Receipt

Dear sir/madam

Please find attached my comments for the above subject.

Matthew Cheng CP2 Comments.doc

Stage 2 Consultation on Future Development of Electricity Market
Economic Development and Labour Bureau

Dear Sirs/Madam

I would like to offer my views to the captioned consultation below.
Best regards.

Matthew Cheng

1. Chapter 2, Section A, Policy objective

The Government's energy policy objective

“to ensure that the public can enjoy reliable, safe and efficient energy supplies at reasonable prices, and to minimise the environmental impact caused by the production and use of energy”

is just a policy rather than an objective. Objective is the means to translate the policy into actions.

I admit that reliable, safe and efficient energy supplies are our competition advantages and should be sustained. Any compromise of these attributes for reducing tariff is stupid and irresponsible.

The policy should include “security” in the energy policy as in other nations such as Japan [1] and Germany [2] where the security of primary fuel portfolio including coal is explicitly mentioned.

The objective should also include energy conversation plan as in the energy objective of Israel [3].

The paper only addressed short term goals and did not touch on long-term issues with what, when and how to achieve our future goals. Some of the long term issues are: the energy consumption forecast, time frame for introducing new generating capacity, plans to save energy, research and development of new and renewable energy, development and use new electricity generation technologies, plan to prepare for the change from scheme of control to market-oriented competition, logistics for extra primary fuels.

2. Chapter 2, Section B, New Supply Sources, Clause 2.3 – 2.17

2.1 There is no evidence that reliable, safe and efficient energy supplied by the existing power companies will be jeopardized and there are track records that the existing companies could provide services in pace with the economic growth. It is not logical to preclude the local companies for the supply of electricity in future. The so-called “New sources” from the mainland (clause 2.3-2.10) and renewable energies (Clause 2.11-2.17) are not wrong but fail to address the quality of electricity, obligation to supply, and environmental commitment.

- 2.2 If the intention of introducing new supply from Mainland is to enhance reliability, safety, efficiency, and environmental performance, it is not at the right moment now, since these attributes are not the strength of the power companies in the Mainland nearby Hong Kong.
- 2.3 If supply from Mainland is allowed, the competition with the existing power companies should be in the same arena – details about electricity quality, obligation to supply, environmental commitments, tariff, taxes should be clearly stated.
- 2.4 The Government's target of 1-2% of Renewable energy (RE) by 2012 is not realistic if REs are to be built in the territory by the electricity companies. The study report made in 2002 by EMSD on the potential applications of RE [4] found that the main source of RE in HK will be "energy-from-waste". This kind of RE is responsible by the government, however, such projects have aroused strong objection from local environmental groups. The building of windfarm on the other hand is also facing the same objection from the local environmental groups although these groups shouted loudly to support RE. This is what the South China Morning Post had mentioned as "the ugly side of renewable energy" that people supported RE on condition that "do not build in my backyard". This is the repeating story of the California electricity crisis.

There is also a lack of economic incentive to attract investor to build REs. The Return on investment (ROI) for a solar PV system at the EMSD head quarter is 40 years [5]. In the study report on the potential applications of RE [4], page A-1, all RE systems were based on a 20 year lifetime. The government projects have a life or ROI longer than the existing SCA of 15 years. The proposed regulated period of 10 years is not logical.

- 2.5 This Consultation Paper did not mention the direction of fuel – coal, oil, natural gas, hydrogen and nuclear. However, in another consultation paper for Persistent Organic Pollutants (POPs), the government suggested to phase out coal in the next 10 years. Coal was started to use in generating electricity after oil crisis in the 70s for its reliable supply. The government should not rule out coal as a major fuel owing to the present poor air quality. As mentioned above, coal is explicitly included in the energy policy of many countries, e.g. Japan and Germany[1,2]. It is also heard that Singapore has started to study the flexibility of using coal for electricity generation in additional to fuel oil and natural gas. The Government should produce a clear policy on fuel for the energy players in HK to follow.

3. Chapter 2, Section B, New Supply Sources, Clause 2.18– 2.22

There is no detail on the access of the grid owned by the existing electricity companies. Clause 2.21(a) (ii) is a good wish.

There is no detail on the responsibility and liability for Clause 2.21 (c).

4. Chapter 2, Section C (II), Environmental Regulation, Clause 2.28 – 2.32

There is no long-term target and objective to control air pollutants. As we know, air and water pollution are cross boundary issues. The proposed measures

- (a) Ignore the present situation.– The poor visibility is associated with the wind direction instead of the amount of waste gases produced locally. The grayish sky in HK is predominantly in winter when the wind direction is from north and north west. Clear sky is mostly in the summer time in HK when the wind direction is prevailing south and south east. This fact is supported by the data from the HK observatory [6]. When comparing the statistics on "number of hours of reduced visibility" and "wind direction" in the last three months and for June to August, we can estimate the source of the air pollutants. The center of poor air quality can also be identified from the EPD's web site for the Regional Air Quality Index [7].
- (b) Apply measures locally without seeking the co-operation with our neighbor – The government adopts an avoidance attitude to address the problem and let the problem continues. We will pay the price of losing tourist and medical expenses of air-pollutant related diseases. The unilateral control is wasting effort and resources.
- (c) Push the responsibilities to the power companies – The emission from the existing power plants only contributed a portion of the total air pollutants and greenhouse gas emission inventory (1990-2004) [8] but the government push the responsibilities to them by various regulations and fines. The other contributors are free from obligation, such as road transportation, navigation, civil aviation, other fuel combustion and non-combustion.

Environmental protection is not just the power company's responsibility but also the consumers. Since more we consume more natural resources are used and more contaminant are produced. Taxes associated with the use of electricity are rather common the European countries [9]. Some of the examples are VAT and electricity tax. In Denmark, there are surcharge of renewable and carbon dioxide tax. I Germany, there is Ecotax and renewable levy. In Sweden, there are fossil fuel levy, green certificate charge, and energy efficiency commitment charges. In Spain, there are nuclear moratorium and decommissioning taxes. The tax is about 30% for Denmark and up to 50% in Germany. The responsibility on environmental protection is solely borne by the power companies in the consultation paper (clause 2.28 to 2.32) is not fair and is lag behind the international practices. For our future, HK consumers should pay electricity / environmental taxes.

5. Chapter 2, Section C (III), Economic regulation, Clause 2.33 – 2.39

5.1 Duration of the Agreement

The proposed 10 year is not the norm of ESI even the government projects mentioned in item 2.4 above have 20 –40 years. Furthermore, the natural gas contract is usually covered 15 years and longer. The norm of the trade is that the buyer have to pay all committed amount of gas even though they will not consume it. That is the power company has to bear the price of fuel gas if the agreement ends after 10 years. Hong Kong is small potato in the international fuel market. Therefore, the agreement duration should be at least 15 years.

5.2 Return on investment is not excessively high. Since the ESI involves

- huge investment – high interest are required for funding

- long payback period – longer the period higher the risk
- high exit barrier – the cost to purchase electricity generating equipment is high but the residual value is very low.

The average cumulative ROI for Exxon in fuel business is 20% per annum over the past 40 years, whereas Exxon's investment in CLP is only 13.5 to 15%. In comparing with other investment, the existing ROI is not particularly attractive. We should strike a balance on the ROI with respect to the risk of investment, the real situation of the ESI market and the purchasing power of the consumers.

The proposed return to the investment of pollution control equipment is unreasonably low. This would be no incentive to better our environment. As mentioned in item 4 above, environmental protection is the responsibility of everyone, the consumers have to bear the costs and not the electricity investors.

- 5.3 Performance improvement is not encouraged but threatened. Since extra penalty is required to pay by the power companies under the stage 2 proposal. This penalty is ridiculous since there are regulations and penalties already for any exceedance of the environmental aspects. The proposed sentence is double penalty to discourage performance rather than encouragement for better performance.
- 5.4 The tariff with respect to the quality is not high. In comparing with the tariff in other places [9, 10], the present tariff only contribute to about 1.7 % of our GDP per capita or 1.94 % of our average household income in HK [11].

Subject: We want clean air!

Urgent Return Receipt

27/03/2006 22:16

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Matthew George

Subject: Clean Air
 Urgent Return Receipt

21/03/2006 18:55

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. To protect my health, and the health of my family, I demand that the Government enhance the control of air pollution due to the power generation, under the future electricity market. This "future market" must not become the pretext for power companies to escape their social and environmental responsibilities to protect.

I recommend:

1. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be transferred to consumers;
2. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
3. An investment in renewable energy should earn an even higher level of permitted rate of return;
4. An Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
5. The targets and time-table for reduction of coal burning should be set;
6. Cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.
7. Government use an air pollution index which adheres to world standard

I demand that the SAR Government bring back clean air to Hong Kong. I and my family need a breath of clean air.

Subject: 網上行動回應《香港電力市場未來的發展》

Urgent Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Future Development of The Electricity Market in Hong Kong
(Stage II Consultation)

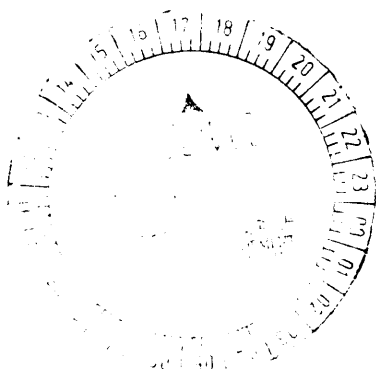

Dear Sir,

Referring to your consultation paper on the future development of the electricity market in Hong Kong, please find my views on this subject.

The proposed 7%-11% rate of return may not give sufficient financial incentives for the power companies to invest. As the power companies are now enjoying a permitted return of 13.5%, I think such a reduction may discourage them to invest.

Also, the proposed multiple bands of asset return for the post-2008 regime may give a wrong signal to the power companies and hence distorting their planning priorities. To provide sufficient incentive to the power company, a single rate of return for all asset types will be a more logical means to adopt.

To ensure electricity reliability and sufficient investment in the electricity supply infrastructure in the post-2008 regulatory regime, the Government should provide adequate incentives for the investor to invest.

Yours faithfully,

Matthew Mak

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

30/03/2006 11:28

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very concerned about the apparently accelerating increase in air pollution in Hong Kong, caused in large part by the power stations. I strongly request that the government fulfil its duty to Hong Kong citizens today, and their children, by enhancing control in the electricity market, so as to restrict all kinds of pollution, including particulates, nitrous and sulphurous oxides and heavy metals produced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I therefore recommend:

1. The permitted rate of return of power companies should be inversely proportional to the emissions they produce with the total emission caps set under the power companies' licences. Those not reducing their emissions to below the cap should be fined on a sliding scale based on the degree to which they are polluting over and above the permitted limits, and be served with cessation orders;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Urgent Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: We want clean air!

Urgent Return Receipt

23/03/2006 16:07

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Maurice Lin

Urgent Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about A. the air pollution caused by the power stations and B. the 24/7 continuous Lorry Traffic on Tuen Mun Highway and other highways to and from China. These lorries all use the cheap fuel available in China, and are incredibly polluting to the area.

A. I strongly request the government to enhance control in the electricity market, so as to restrict the emission of all kinds of pollution produced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I therefore recommend:

A.

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gases;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We request the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

B.

7. Find a solution to the emission of "Dirty Diesel" fumes from the endless stream of lorries from and to the border along the major highways. This is to be getting even worse when the Zhuhai Lantau link is opened up. I would advise the environmental department responsible person to drive down the Tuen Mun Highway at 8:00 or 9:00 AM with car windows open and airconditioning turned off. It is like committing suicide. All those fumes hover over Hong Kong and get replenished by the hour.

I cordially request the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Hong Kong

Dear Mr. Ip,

I cannot agree with you on some of the proposals after reading the government's Stage II Consultation Paper.

As all we know, we are enjoying a highly reliable electricity power supply at reasonable cost under the existing regulatory regime (Scheme of Control Agreement). I fully appreciate the initiatives taken by the two power companies on environmental protection as well.

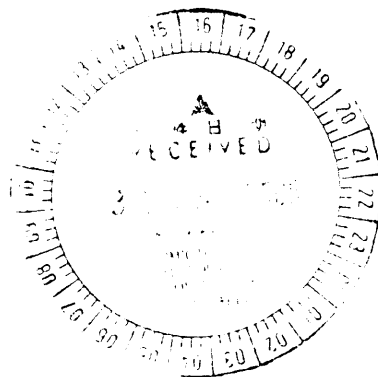

Against this background, my views on the consultation are that the regulatory period should be retained 15 years and the proposed 7 – 11% rates of return should be given up as both of the proposals, if adopted, will increase investment uncertainties that may result in underinvestment in the power industry.

I consider that it is not necessary to have a drastic change to the current regulatory framework.

Yours sincerely,

May Chan

realname: May Chau

subject: 13.5 %回報是否過高 ?

Enquiry: 發電設施的投資是很長遠的,而設施的設計壽命一般亦達三十多年,諮詢文件建議將准許利潤由 13.5 % 降至 7 至 11 % .請問理據何在? 協議為期起碼十年 (原本是十五年) 在這期間的社會經濟會有何改變? 政府有預算嗎? 在經濟低迷時, 13.5 %回報是過高.但若經濟上升, 13.5 %回報可能完全不吸引甚至偏低.80年代供樓利息廿多厘.現在是8厘.

如果回報降低,電力公司會削減開支,減少人手或減低營運開支,維修保養質數下降.香港聯交所可以承受頻繁的停電嗎?到時香港市民可能得不償失.

市民及商戶的開支中,電費所佔不多.而交通、租金等開支相對大得多,最近商舖加租動不動50% 甚至100%. 政府要管制嗎?

經濟上升,其他投資有遠高的回報, 電力經營商不如將龐大資金作其他用途.為何要投放在如此長期而回報偏低的生意上?

所以本人認為回報應維持 13.5 % 不變. 請勿輕舉妄動!否則後果的嚴重性可能難以估計!

Subject: We want clean air!

Urgent Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

May Lam

Lower Albert Road, Central,
Hong Kong.

Dear Mr. Ip,

Stage II Consultation on Future Development of the Electricity Market

In response to the Government's consultation on the development of the electricity market in Hong Kong after 2008, I have the following comments:

The Government proposed to lower the power companies' rate of return to 7-11% and shorten the period of the bilateral agreements between the Government and the power companies to 10 years. These proposals increase the investment risks of the power companies and it will not be surprising that the power companies will reduce their future investments in the industry. This will affect the reliability of power supply in Hong Kong. As Hong Kong's economic stability relies heavily on a stable and reliable power supply, the Government should drop these proposals and continue to use the current regulatory framework which has proven to be effective in regulating the power companies for a long time.

Yours faithfully,

May Li

2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air. NOT ONLY TO IMPROVE THE ENVIRONMENT BUT ALSO TO IMPROVE THE HEALTH OF ALL CHILDREN, ELDERLY AND ALL HONG KONG PEOPLE! HAVE A HEART!!!

Subject: 我要清新空氣

Urgent Return Receipt

致經濟發展與勞工局：

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來的電力市場，能夠加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我建議：

1. 電力公司的准許回報率需與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 各項減排設施（如二氧化硫脫除裝置）的開支與成本不能轉嫁給消費者；
3. 可再生能源的投資可享有較高的准許回報率；
4. 制訂減少燒煤的目標和時間表；
5. 設立能源管理局，統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

祝好

Subject: We need clean air to be alive!

Urgent Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

May

Mega Technology Engineering Co. Ltd.

31 Mar 2006

Economic Development and Labour Bureau
2/F., Central Government Offices, Main & East Wings
Lower Albert Road, Central
Hong Kong

Dear Sir,

Electricity Market Stage II Consultation

As a Hong Kong base enterprise with core business in civil engineering and network construction, we would like to submit our views on the electricity market future development for the Government's consideration.

Since our establishment in 1987, we have been providing our clients with quality services which highly rely on our advanced computer equipment and systems like electronic street mapping system and data processing system in our back office. All these electricity-driven equipment and systems are critical to our daily operation. As such, to ensure that our daily operation will not be jeopardized, we consider that future electricity market should continue to deliver reliable electricity supply on par with the current reliability level.

As one of the major players in local telecommunication network infrastructure construction market, we would like to point out that the reliability of telecommunication network depends very much on the amount of investment in network construction and maintenance. Drawing an analogy between telecommunication and electricity networks, we believe adequate investment in electricity network is also the determining factor in

maintaining electricity supply reliability. Referring to the consultation paper, the proposals like lowering of permitted rates of return, differentiation of assets and shortening of agreement period will deter investment in electricity infrastructure.

In view of this, we request the Government not to adopt the above proposals and to devise an electricity market regulatory regime that can sufficiently stimulate investment in electricity infrastructure so as to ensure high electricity supply reliability can be maintained in future.

Yours faithfully,

A handwritten signature in black ink, appearing to read 'Cm Lau', written in a cursive style.

2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

30/03/2006 13:53

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Subject: 我要清新空氣

Urgent Return Receipt

致經濟發展與勞工局：

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來的電力市場，能夠加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我建議：

1. 電力公司的准許回報率需與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 各項減排設施（如二氧化硫脫除裝置）的開支與成本不能轉嫁給消費者；
3. 可再生能源的投資可享有較高的准許回報率；
4. 制訂減少燒煤的目標和時間表；
5. 設立能源管理局，統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

祝好

I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Melinda Sturges

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Future Development of the Electricity Market in HK - Stage II
Consultation

Urgent Return Receipt

Dear Sir,

I am a citizen of Hong Kong, and would like to provide my views on this consultation paper as attached.

Regards,
Melissa

electricity.doc

A. Policy Objective

There are no clear energy policies in the proposed paper. A balanced fuel mix strategy is important in order to ensure supply security and cost benefits.

B. New Supply Sources

(I) Supply from the Mainland

The power shortage problem in the Pearl River Region remains severe. Other than the supply reliability, we should also need to consider the fuel sources of the generating plants on the Mainland. Pollution in Hong Kong will still be persistent if the sources from the Mainland are not environmental friendly. Also, the readiness of the grid, such as its capacity, technical concerns, etc., on the Mainland to be used for transmitting power to Hong Kong needs to be carefully studied.

(II) Renewable Energy

Land is very crucial to develop renewable energy, e.g. wind power. Also, the output from renewable energy sources should be carefully considered such that they can serve the purpose of the Hong Kong SAR Government and the need of the customers.

(III) Arrangements to Cater New Supply Sources

The Hong Kong SAR Government should provide a more concrete proposal and roadmap on introducing new players to the market in the paper such that the citizens of Hong Kong could be aware of the approach taken by the government.

C. Proposed Regulatory Arrangements

(I) Environmental Regulation

There are no clear environmental policies with the emission standards established in Hong Kong. Emission standards should be practical and applicable to all services providers. Furthermore, more details should be provided on the emissions trading scheme to the public. However, it should be made clear that a more environmental friendly power supply will cost more and it is the responsibility of all involved parties to share the additional costs incurred.

(II) Economic Regulation

Contracts of fuel supply usually last for more than 15 years as capital

commitments involve billions of investment. Therefore, the government should consider a longer duration, say at least 15 years, so that power utilities could established better procurement strategies with their fuel suppliers to reduce the operating expenditure.

(III) Return

The proposed return is unreasonable. In order to attract investment from power utility, the rate of return should be remained 13.5% to 15%.

Subject: Comment for electricity market
 Urgent Return Receipt

comment_2.doc

Dear Sir,

In my opinion, reliability of electricity supply is importance in Hong Kong, just like other world-class cities in the world. Hong Kong has changed to a service economy in the recent decade. The commercial and financial sectors rely on a continuous, stable and reliable supply for business operation. Most of the residents in Hong Kong are living in high rise buildings. Continuous electricity supply with minimum and short interruptions, especially emergent power interruption, for the running of service lifts, water pumps and other services is essential for the general household. In addition, reliable electricity supply is also very important to public safety and convenience, like maintaining the proper operations of public road lighting and traffic lights.

Use of electricity is just part of our daily lives. The mechanism to keep the lights on round the clock may be easily taken for granted. The blackouts involved various big cities in the world in recent years remind us again that stable and reliable electricity supply would cause enormous financial losses in economies, and disruption to every aspect of our daily life. Most importantly, it is apparent that a proven regulatory regime would ensure the availability of stable and reliable supply.

Both of the two power companies are investor owned and have been operating for more than 100 years. The current regulatory regime (scheme of control arrangement) has demonstrated its success in terms of stable, reliable and sufficient electricity supply. The key factors that underpin such success, just mention a few are good corporate governance, highly motivated workforce, affordable tariff, reasonable returns to investors and simple regulatory regime.

The proposed regulatory regime should balance the interest of stakeholders, viz. the general public, the employees of the electricity power industry and the shareholders.

Hong Kong is a small place. There is no room laying lots of additional cables and building lots of additional generation, transmission and distribution plants. Introducing of additional operators would not lower the tariff. The costs of investment for new market entrants will eventually be bear by the general public. Hence the interests of customers are undermined due to probable higher tariff level.

Introducing new market entrants cannot improve stability and reliability of electricity supply. Problems in one system will affect the stability of other interconnected systems.

It should be noted that the existing regulatory mechanism is simple and involves few government resource. Establishment of complicated regulatory mechanism would involve substantial costs and in the end the tax-payers have to bear the costs.

Investment on electricity power industry is a long term investment with long payback period. The useful life of electrical power plant and equipment for electricity generation and delivery like generators, cables, transformers and switchgear are normally taken as 30 to 35 years. Besides, such investments involve enormous capital investment and therefore involve substantial risks, viz. business risks, interest rates risks, currency risks, and political risks etc. These investments should not be confused with speculations and gambling. Reasonable returns on investments to commensurate with the risks taken by the shareholders are essential to encourage continuous investments to meet new demands and rejuvenate existing plants and equipment to enhance operations and performance.

A stable and reliable electricity supply is also stemmed from well trained, motivated and highly disciplined workforce in the industry. Radical changes on the electricity market would disturb the existing stable working environment and eventually degrade the reliability electricity of supply.

Import of electricity generated from power plants with high pollution level outside the territory is unwise and unfair to the local power utilities that have invested substantial capital on environmental protection measures.

To conclude, the existing regulatory regime under the Scheme of Control Arrangement has been operating successfully and in a cost effective manner in the past decades. Such arrangement has balanced the interests of the consumers and shareholders of the power utilities. Besides, the simple regulatory mechanism requires less public resources for surveillance and control by government officials. For the interest of the public, such regulatory regime is highly recommended for the post 2008 electricity market.

Yours sincerely,

Melody

The revised letter with my detail comments is attached as below:

Regards,
Melody Fu

GOVT (STAGE II) CONSULTATION ON FUTURE DEVELOPMENT OF ELECTRICITY MARKET.doc

Realname: Melody Fu

Subject: Comments on future development of the electricity market

Dear Sir,

It is referred to the Government Stage II Consultation paper on the future development of the electricity market in Hong Kong.

Since Hong Kong is a most densely populated city with different races, reliability and stability of electricity supply are very important, especially; Hong Kong is a well known international financial centre, any interruption or failure of supply may affect the image of our “ Oriental of Pearl ” and cause disasters to Hong Kong.

Electricity as we know is a most essential element in our daily life. Now, we have been enjoying a stable and a reliable supply of electricity while comparing with other high risk power outage countries, such as Mainland China and etc.

If government intends to cut the future permitted returns and to change the contract period from 15 years to 10 years as well as to impose a pollution penalties to the Power utility, it will have a great impacts and drawbacks to the public. As the permitted return of 7 to 11 per cent on planned assets is too low and the contract period of 10 years is too short for the capital-intensive industry with long payback duration. The shorten contract period of 10 years will surely bring uncertainties and discourage the investment, but increasing the risk of investment and causing the risk hurting reliability of supply at all.

Moreover, if government really wants to discourage investment in emission reduction facilities by fixing the lowest return rate at 7 per cent and penalize power firms for failing to meet emission targets, it is without doubt unfair and unreasonable. Also, argument will be raised if government complicates the regulatory regime by fixing different return rates on different types of assets. Basically, the return and the cost cannot be separated.

However, I do not think that the electricity charge is so high when compared with other household necessities as gas and transportation charges, as we have already had competitive tariffs in Hong Kong in the past 40 years. It does not mean and guarantee that the charges of electricity can be reduced and a high quality of service can be maintained after market reform; I dare to say market opening may just cause many grey uncertainties.

I realize that Government should vigilantly review and prudently analyze before making market reforming decision. In fact, it is not worthy of making Hong Kong people in such a dangerous position, power market opening is not suitable in Hong Kong. As a result, I would definitely agree and highly support to maintain the current Scheme of Control after 2008.

Regards,
Melody Fu

Subject: Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

30/03/2006 16:12

Dear Sirs,

May I share some of my views to the recommendations published in ' The consultation paper on future development of electricity market in Hong Kong' ?

(A) Deregulation of the Electricity Market

The paper seems not having many discussions on the deregulation of the electricity supply industry and the establishment of a spot electricity market. One of the pioneers in this development is New South Wales State of Australia. The primary requirements, certainly, is the separation of a utility company into power generation and power transmission & distribution businesses.

The advantages of having two different entities are to allow a power company to sell surplus capacity to demanding customers in another distribution grid through the spot market. Because of an open market, the government needs not to guarantee a permitted rate of return with the utility company. The supply grid company owns a free choice to buy the cheapest electric power available from a spot market for their customers, including importing from Mainland China. Such a market force will force a power generating company to phase out inefficient generating units and encourage more investments on cost effective generating units. New business opportunities will also attract the supply grid company to invest more on interconnecting lines with other supply grids.

The spot electricity market will free up not only the market strength of a utility company, but also the public to participate in the supply business if they have a choice in electricity suppliers or a right to sell surplus green power from their own grid-connected renewable energy.

(B) New Supply Sources

1. Supply from Mainlands

Importing electricity from Mainlands China is a viable option to meet the electricity demands in Hong Kong but the market shares will unlikely to be large as demands in Guangdong provinces will also increase rapidly. A more proactive approach would be new power companies to invest new generating plants in China and export back to Hong Kong through the supply grid of Guangdong if we have a spot electricity market. These are new business opportunities to the power industry once local electricity supply industry becomes deregulated.

2. Renewable Energy

Because of geographic constraints, Hong Kong does not have many renewable sources. If we are to achieve 2% of the electricity coming from renewable sources by 2012, the current scale of investment from both power companies on renewable energies are not too optimistic. Hong Kong needs to attract more investment from private on renewable energies, like solar panels in property developments, in the promotion of renewable energy. We could also expand our use of renewable energy by importing from Mainlands if our electricity market is open.

3. Grid Access

Limitation of access to a supply grid has restricted the sales of electricity to a customer from a third party supply company. It also forbids the development of small scale grid-connected renewable energy to export electric power into the supply grid via a customer own renewable source. Grid-connected solar panel is a mature technology that does not require power storage or modification of the supply grid. All we need is a two ways energy meter and a power socket.

(C) Proposed Regulatory Arrangements

- ◆ Hong Kong needs new legislations for the deregulation of the electric supply industry and a green power policy to attract more investments from public.
- ◆ Unless local power companies are willing to invest more on natural gas for power generation, Hong Kong is unlikely to achieve great improvements on gas emission. In fact, gas emission shall be an environment policy for all industries. Hong Kong needs a long term policy (>15 years) that would encourage the use of low emission fuels for power generations, cooking, transportations, and production. Alternatively, we might consider relocating polluted business at some remote sites and to promote the use of electric power in densely populated areas in all walks of life.
- ◆ There shall be a power supply monitoring board to oversee the implementation, safety, and commercial operations of the deregulated electric industry.

Please excuse my ideas in brief. Certainly, there are many regulations and rules that need to be established to protect the interests of the public and investors before we could enjoy a clean city with cheap, reliable, and safe electricity supply. I just hope to share my views with you for building a better Hong Kong.

Best regards,

Mendel Ip

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Hong Kong

Dear Sirs,

RE: Consultation Paper on Future Development of the Electricity Market in Hong Kong – Stage II Consultation (“Stage II Consultation Paper”)

We refer to the Stage II Consultation Paper and would like to take this opportunity to provide you with our thoughts on the issues affecting future electricity supply in Hong Kong.

We are in agreement with the Hong Kong Government’s overall policy objective to continue providing the public with a reliable, safe, and efficient electricity supply at reasonable prices while minimizing environmental impact from the generation and usage of electricity. With this objective in mind, Merrill Lynch would like to share the following specific points regarding electricity supply in Hong Kong:

1. Merrill Lynch, as an institution, must continue to have a supply of electricity which is totally reliable. Otherwise, our business will suffer from unacceptable disruptions.
2. During recent years, the United States of America witnessed numerous electricity blackouts. The blackouts mentioned below resulted in high costs to cities, impacted many businesses, shut down airports and communications networks, and temporarily debilitated millions of people
 - a. Blackout in the Northeast Region of the United States (August 2003)
 - i. Estimated losses of US\$6 billion to the United States
 - ii. The blackout affected approximately 50 million people. New York City, alone, was without electricity for about 29 hours
 - b. Blackout in San Francisco, California (December 2003)
 - i. Estimated losses of US\$400 million to the city of San Francisco
 - ii. The blackout affected nearly 1 million people, and power suppliers needed approximately 30 hours to fully restore electricity supply

As a leading international financial hub, Hong Kong cannot afford to experience similar blackouts. Reliability of Hong Kong’s electricity supply is critical for Hong Kong’s continued success and economic development.

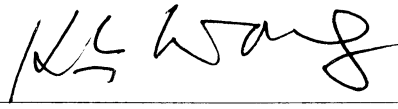

3. To ensure maximum reliability in electricity supplies, the power companies will need to be appropriately rewarded. Given high capital expenditure needs, long maturity contracts (i.e., longer than 10 years) and appropriate returns are necessary for the power companies.
4. Merrill Lynch's current electricity costs are affordable. In 2005, Merrill Lynch's expenditure on its Hong Kong electricity supply was only 0.2% of total operating costs. This figure came down from 0.3% of total operating costs in 2003.

Thank you for the opportunity to share our thoughts. Merrill Lynch looks forward to remaining involved as the Hong Kong Government firms up its policy on the future development of the electricity market in Hong Kong.

Yours sincerely,

Subject: Comments On Stage II Consultation
 Urgent Return Receipt

Dear Sir,

I refer to the Stage II consultation and please note my comments as follows:

The rate of return linked to emission cap target achievement is not a good proposal. According to the existing Air Pollution Control Ordinance, the two power companies in Hong Kong have already been subject to penalty when they cannot meet the emission cap.

The extensive use of RE will be very expensive and the high cost will certainly be passed to the consumers that make the tariffs even higher. We need a high reliable electricity supply as well as at reasonable price.

The 10 year regulatory period and the 7 - 11 % rate of return will discourage utilities to invest. Power shortage like the Mainland China will happen and we all will suffer. This would have enormous impact on Hong Kong as a world financial centre.

Regards,

Mervin Leung

Central, Hong Kong

Dear Sir,

Comments on Stage II Consultation on
Future Development of the Electricity Market in Hong Kong

In response to the Stage II Consultation, we are writing to express our views on a few issues related to the future development of the electricity market in Hong Kong.

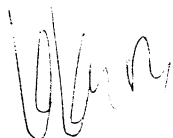

As a sound broadcaster in Hong Kong providing round-the-clock radio services to the general public, power supply reliability is crucial to our operation. It is our pledge and core responsibility to provide uninterrupted sound broadcasting service to the community, which indeed is largely dependent on uninterrupted electricity supply.

Reliability, undoubtedly, comes at a price. Sufficient and continuous investment in electricity infrastructure, which depends mostly on the financial incentives offered to the utilities, is the key to achieve reliable power supply. On the other hand, just like any other electricity users, we are naturally concerned with the size of our electricity bill. However, from an operational point of view, electricity bill in fact constitutes a very small portion of our operating costs when compared to other overhead expenses. It is therefore unjustifiable to compromise supply reliability for nominal savings possible from revising the current bilateral Scheme of Control Agreements (SCAs), with particular reference to the rates of return and regulatory period. The SCA regime was proven to have been effective in ensuring reliable and safe electricity supply in Hong Kong while providing flexibility for both the Government and the business operators to respond to market demands over the past forty years. We are, therefore, of the view that the present rate of return offered to the local utilities should be stable and preferably maintained at the current level. Furthermore, a longer-than-10 year regulatory period is considered more conducive to attract investment in Hong Kong.

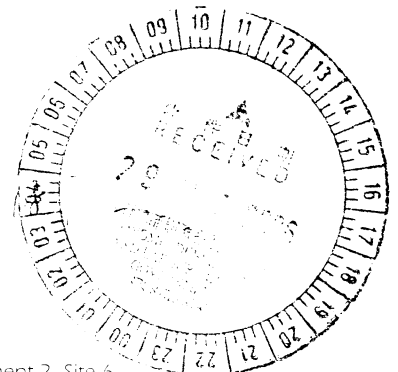

We hope you could consider our views and keep any changes to the present regulatory regime to an absolute minimum.

Yours faithfully,

Subject: 網上行動回應《香港電力市場未來的發展》
 Urgent Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 - 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

先生你好：

香港電力市場未來發展

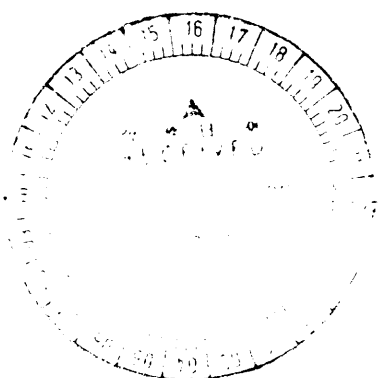

得悉政府正為香港未來電力市場展開第二階段諮詢，本人對某些建議有個人見解，敬希參考。

政府建議將電力公司的資產分不同類別，再給予不同的回報率，但其中獲最少回報的，是減排設施。試問在這回報率架構下，又有誰會投資在環保設施上呢？政府既然覺得改善空氣質素重要，為甚麼減排設施只得最少的回報率？此外，無論政府或電力公司，均需浪費時間和資源在資產分類上，並無效益。本人認為讓電力公司在計劃各項基建設施時，有適當的自由度，可取得更適當的平衡。

還有，香港電力公司供電設備的壽命不短，投資者需要付出大量資金來維持香港的供電可靠性。如將協議年期改為十年，將會削減投資者願意投資在電力行業的意欲。本人希望政府在 2008 年後繼續維持現有的十五年期協議。

最後，政府又建議將電力公司的准許回報率降至 7-11%，我覺得在一個將來步入通脹週期的社會裏，此等級的回報率實在太低，根本不能吸引投資者作長線投資。本人認為維持現有的准許回報率，才是合理。

希望政府能考慮本人以上意見，作英明決策。

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely, Michael Hart

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Sincerely,
Michael Higgins

Subject: My Opinion on the future development of Electricity market

Urgent Return Receipt

Both the 2 electricity companies in HK have been serving us for over a hundred years. What we need is a stable supply of electricity but not policy show. Do Not try to win the public's support by opening the market. Do what you got to do, our government. The expenditure of electricity consumption is just about 1% of household income. So please think before you act.

Subject: 網上行動回應《香港電力市場未來的發展》

Urgent Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: Future Development of the Electricity Market in Hong Kong - Stage II Consultation

Urgent Return Receipt

Dear Sirs

I fully agreed with the proposed policy objective on ensuring a reliable, safe and efficient electricity supply at reasonable prices and with minimal impact to the environment. Given the situation in Hong Kong which is characterized by high population density, high urbanization and high-rise buildings, reliability is of paramount importance to this World Class City. This was also reflected in the results of Stage I Consultation. In part, this was one of the factors that supported the growth of the Hong Kong economy. Therefore, great care should be taken when changing a system that served well in the past.

For the current consultation paper, I would like to express my views and comments in the followings:

1. In future, renewable energy (RE) is expected to play an important role in the energy market. At present, RE does not seem to be an attractive mean of providing electricity because of its economics. Therefore, higher rate of return or incentives to power companies are essential for promoting RE.
2. With the same purpose of improving air quality, it is difficult to understand why the facilities aiming to reduce emissions should have lower rate of return. Investment on such emissions reduction facilities should be treated the same way as RE if both of them help improve the air quality in Hong Kong.
3. The future regime is proposed to be regulated via a bilateral agreement, similar to the existing scheme of control agreement. However, a 10-year duration for the agreement in the proposed arrangement is considered to be short. Given that electricity supply is a highly capital intensive business with long asset lives and long purchase commitment on fuel, a short duration agreement would lead to high investment uncertainty.
4. The government should avoid overregulation because it comes at a cost such as regulator's costs, compliance costs, loss of innovation, dynamic efficiency and other costs due to complex regulation. Regulation should be limited in scope and remain simple.

In the end, I like to point out that a general perception exists among the public. Everybody, if asked, would like the tariff decreased. Commercial firms would like to have their cost of business reduced. However, we should ask ourselves how much of our monthly income is used to pay for electricity bills. Are we not getting reliable services? Imagine the situation in Hong Kong, can we live with sub-standard services? In considering a change of the current regulatory regime, the government should not change for the sake of change. Continuous and steady investment in the electricity market is required as long as population grows, living standards improve and urbanization

continues.

!

Regards

Michael Leung

Dear Sir,

Stage II Consultation on
Future Development of the Electricity Market

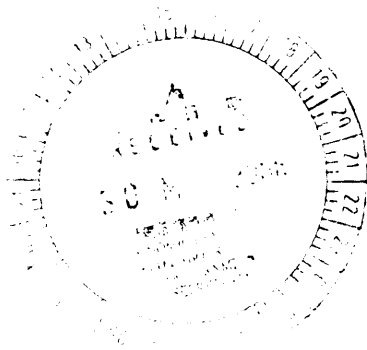

I would like to comment on the Stage II Consultation paper as below.

The proposed 10-year regulatory period is too short and the 7-11% permitted rate of return is too low. These cannot provide enough incentives for the power companies to invest in their power systems. Electricity supply is a key infrastructure affecting the daily life of all the people and the economy of Hong Kong. The government should provide adequate incentives to investors so that they will continuously invest in the electricity infrastructure and maintain a high level of electricity supply reliability.

Yours faithfully,

Michael Loong

Dear Sir,

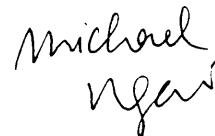

Electricity Market Development Stage II Consultation Paper

I would like to express my opinions on the future electricity market development.

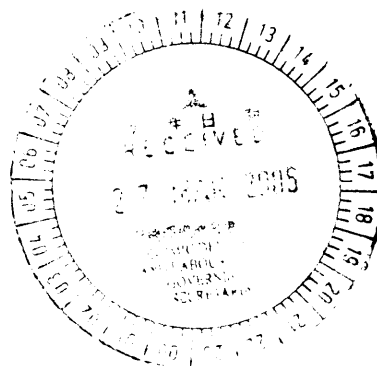

The present electricity regulation delivers high level of supply reliability due to the continuous investment injected in the electricity infrastructure. I consider that the present level of return given to the power companies is adequate to cover the risks involved.

Glancing through the consultation paper, the proposed new return rate is 7-11%, which is substantially lower than the present level. Since there is no figures or calculation in the paper to substantiate this proposed range, I wonder such a low return range may not be able to attract sufficient investment to maintain an adequate and reliable electricity supply. Since Hong Kong can hardly afford the consequence of blackouts, the Government should be cautious about lowering the present level of return. In my views, the proposed level of return is too low and may lead to detrimental effect on electricity supply reliability.

Yours faithfully,

Michael Ngai

2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong Permanent resident, I am very much concerned about the air pollution caused by the power stations and incinerating plants.

I strongly demand the government to enhance control of the effluents produced by the electricity generating company, so as to impose the application of proven technology to reduce pollution to the utmost feasible and best know standards. These investments and control measures must not be used by the electricity companies as a pretext for an escape from their social responsibilities.

I thus recommend:

1. The permitted rate of return of power companies should be linked to the total emission caps set under the power companies?? licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;

6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.
7. The existence of two private monopolies that earn a 50% after tax profit margin (a profit margin unheard anywhere in the world for a private utility) is a blot on the claim that Hong Kong is a "Free and open" economy. The people of Hong Kong have to pay for their electricity through their noses - a 50% net profit margin is pure extortion and should not be allowed to continue.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: 網上行動回應《香港電力市場未來的發展》
 Urgent Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 - 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

30 March 2006

Economic Development and Labour Bureau
2/F., Central Government Offices, Main & East Wings
Lower Albert Road, Central
Hong Kong

Dear Mr. Secretary,

I would like to express my views on the proposals on the Future Development of Electricity Market.

Hong Kong is one of the financial hubs in the world. A secure and reliable supply of electricity is very critical to our economy and society. I am glad that I have enjoyed a very high level of reliability in Hong Kong.

The Government has raised many proposals. Among these proposals, the permitted rate of return and the regulatory period will affect the whole electric power industry. A 7-11% return rate is too low compared to other investment opportunities. It will discourage the power company to further invest in their power facilities.

For the regulatory period, we all know that power industry is capital intensive and the return period is very long, usually more than 25 years. For a regulatory period of only 10 years, the risk of investment will be very high. The power company would try to avoid doing long-term investment. Without suitable investment, the current level of reliability cannot be guaranteed.

Yours faithfully,

Michelle Chong

I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Michelle Garnaut

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Subject: 網上行動回應《香港電力市場未來的發展》

Urgent Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 - 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Subject: 網上行動回應《香港電力市場未來的發展》

Urgent Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

_____ (署名) 啟

Dear Sir,

I am please to propose the following opinions for the "Consultation Paper on Future Development of the Electricity Market in Hong Kong".

1. 10-year regulatory period with and option to extend by another 5 years

Comments :

- The Proposed 10-year regulatory period may not enough for the return of investment cycle for power industry and hence increase the risk on the investment.
- It may cause investor input lesser resource for the electricity power equipment.

2. Multi-tired rates of return applied to difference type of asset

Comments :

- Should not differentiate types of assets as the cost of raising capital for the different assets are same.
- It will make the permitted return mechanism complicated.
- The administration costs will be borne by customer.

3. Rate of Return linked to emission cap target achievement

Comment :

- Under current air pollution control ordinance, power companies are already subjected to penalty for failing to meet greenhouse gas emission standard. This will be double-penalty on power companies and the arrangement is not reasonable and unfair.
- There are uncertainties if Mainland China is involved. If the air pollution control ordinance cannot apply in Mainland China power companies, it will be unfair for the Hong Kong power companies.

4. Electricity supply from Mainland China

Comment :

- There are no sign for the electricity supply will have surplus in Guangdong in the future.
- Importing Electricity from China will have a risk to cause lower the electricity supply reliability in Hong Kong.
- The air pollution may be imported from the Mainland China power station to Hong Kong.

For and on behalf of
Microware USA Limited

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Subject: Comments on Consultation paper on the future development of the electricity market in Hong Kong - Stage II Consultation

Urgent Return Receipt

Dear Sir,

I am a Hong Kong permanent resident and I am very much concerned about the air pollution in Hong Kong some of which is clearly caused by the power stations.

My comments / observations in relation to the Consultation paper on the future development of the electricity market in Hong Kong - Stage II Consultation are;

1. I strongly agree the electricity market should be regulated.
2. I believe the objective of the regulation should be to ensure that Hong Kong has a safe, reliable and sustainable supply of electricity and that whilst the price of the electricity supply is important the emphasis should be on sustainability and in particular the effect on Hong Kong's air quality of current and future emissions from power stations in (or outside Hong Kong) used to supply Hong Kong should be monitored and reduced.
3. The reasons that the emissions should be monitored and reduced and power companies should be financially motivated to invest in renewable energy are twofold;
 - a. the emission from our power companies effect and contribute to the appalling air quality in Hong Kong; and
 - b. recognizing that most of the air pollution comes from the mainland we have no chance of persuading the mainland authorities to help us if we can not at least demonstrate that we are getting our own house in order otherwise why should they be bothered to assist us.
4. The power companies are profit driven and we can not reasonable expect them to change their behavior and incur significant capital expenditure if we do not provide them with;
 - a. Certainty of return – so the new agreements should be for 15 years (if not longer); and
 - b. Significantly increase the returns they will earn by investing in renewable and less polluting forms of energy production - by significant I mean they get twice the return or higher – I do not have the technical knowledge to tell you exactly how to do this but some form of formula that links the return to the level of pollutants generated from a particular form of energy production would seem to be a sensible starting point. In this regard I support the use of varying returns for different types of assets as outlined in Para 2.58 of the paper but would urge that the difference be significant so as to have a strong economic effect on the power companies bottom line and if this means Hong

Kong has within reason to have more expensive electricity but less locally generated pollution then so be it.

5. Whilst over investment in excess capacity should be guarded against an exception should be in relation to bona fide research and development of renewable energy power generation sources. The reason for this is that the current technology clearly does not allow renewable energy to form a large proportion of output (the current targets are for only 1% - 2% of local power needs by 2012) and significant further research would appear to be needed to make renewable energy a more economically viable proposition.
6. The paper explains that gas fired emissions generate 50% less carbon dioxide than coal – fired generation but other than asking does not explain how the former will be encouraged. Asking is not good enough a proper study needs to be done on the reasons why the power companies need to be asked – has the government done all it can in relation to considering the possible locations of gas storage facilities?
7. The grid access of in house users of renewable energy should be for a nominal charge as should their connection to the main grid for back up purposes.
8. The grid access of suppliers of renewable energy should be on favorable terms if necessary partially subsidized by the government so that the cost of the supply of the resultant electricity is competitive as without the prospect of a economically viable project why would anybody spend the time and effort to generate new supplies based on renewable energy.
9. The inter-connection of the two existing networks should be upgraded as I understand the useful life of the current inter connector is 2011.
10. The government and all the Hong Kong political parties should significantly step up their work with National and provincial government in Guangdong to improve the air quality in the Pearl River delta;
 - a. this is one instance where political difference should be put aside and everybody should be working together;
 - b. one major area of focus should be how to introduce some form of polluter pays tax or levy as we all know that a large number of the factories based in Guangdong are Hong Kong owned or controlled and some form of cross border enforcement is long overdue as whilst I think we clearly need to focus on our own electricity companies *we equally need to focus on Hong Kong businesses that operate from Guangdong,***

Subject: We want clean air!

Urgent Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Mike Bolsover

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: We want clean air!

Urgent Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Mike Smith

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Subject: 我要清新空氣

Urgent Return Receipt

致經濟發展與勞工局：

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來的電力市場，能夠加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我建議：

1. 電力公司的准許回報率需與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 各項減排設施（如二氧化硫脫除裝置）的開支與成本不能轉嫁給消費者；
3. 可再生能源的投資可享有較高的准許回報率；
4. 制訂減少燒煤的目標和時間表；
5. 設立能源管理局，統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

我不想再見到香港的天空每天被蒙上一片薄霧

祝好

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Stage 2 consultation on future development of electricity market in
hk

Urgent Return Receipt

There is a claim that clp is worsening the air quality in hk by supplying the electricity in guangdong province, asking clp to stop the sales immediately in order to reduce the emission of sulfur dioxide and other pollutants. I think its totally unfair. Some transportation like bus also attribute to the problem of air pollution, why they didn' t ask the bus company to cut their service at all? It is the most ridiculo! us solution that I ever heard. The long term solution should introduce to use more clean fuels, like natural gas for power generation. Government should support two power companies to build the plant or provide incentive to improve the emission of the existing coal plant. The first step is to lay down clear energy policy for power supply.

Subject: we need fresh air!!!

Urgent Return Receipt

To: Economic Development and Labour Bureau

I am a Hong Kong resident of 14 years and over these 14 yrs I have watched Hong Kong's air quality deteriorate at alarming rates. I am an avid runner and have been very disturbed by the smog and haze and air pollution that has surfaced in the recent years. I also have two young daughters under the age of 3 who are breathing this terrible air. It has gotten so bad that my husband and I are considering relocating to a cleaner non-Asian city b/c of the pollution.

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. To protect my health, and the health of my family, I demand that the Government enhance the control of air pollution due to the power generation, under the future electricity market. This "future market" must not become the pretext for power companies to escape their social and environmental responsibilities to protect.

I recommend:

1. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be transferred to consumers;
2. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
3. An investment in renewable energy should earn an even higher level of permitted rate of return;
4. An Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
5. The targets and time-table for reduction of coal burning should be set;
6. Cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand that the SAR Government bring back clean air to Hong Kong. I and my family need a breath of clean air.

敬啟者：

本人認為電力改革不應只?眼於降低價格，而應從電力市場的可持續發展及各界的利益為大前提。電價減了，是否可靠度定能一同保持？而減少排放設備回報率降低，是否可促進改善環境的目標？風能的可靠度受不可預計的天文環境條件所影響，因此香港需研究它的可行性，如在那些無風的日子，是否須靠傳統的發電設施提供電力？而就爭取長期燃料供應合約而言，一個10年的規管年期是否太短？政府容許巴士公司能夠有9.7%的回報，相比之下，電力公司資產更加龐大而且不可遷移，為我們提供高水平及可靠的電力服務，令到電力公司有投資誘因，是否應提高回報率？目前國內電力短缺，而且兩地的水平相差太遠，不應在沒有藍圖及時間表下貿然推行，是否應與國內電力市場融合而從詳計議呢？

Subject: comments on electricity market
 Urgent Return Receipt

Sirs

Although the tariff of electricity in HK is rather high, the reliability is remarkable.

I would say to maintain current operational environment and should not take risk. You can see in recent years, other places like USA, New Zealand and some European countries were suffered from black out. Timely investment to develop the system and replace obsolete equipment is crucial.

To Economic Development and Labour Bureau,

Don't just talk talk and talk...take action. Even not for this generation, think for the future generation. You owe it to the children and future generation.

Recycling, rubbish, cleaner air are the most important issues the HK government must take immediate action. Stop procrastinating. The companies that are the major cause of air pollution should be stop. Just because they are big corporations with power that does not give them free reign to kill people. I am sure they too have children and would love to see great grand children of theirs live a better healthy life in HK.

It always amazes me that actions that are good for our health take forever to be implemented and so many bureacratic bullshit to go with it.

If there is an ounce of care, show it now. Do something about it NOW.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Comment on stage 2 consultation of electricity market

Urgent Return Receipt

Dear Sir or Madam

I have read the consultation paper of stage 1 and have my opinion as below:

Recently, many people ask for opening the electricity market and the SOC should be ceased at all in 2008. The stability of electricity supply is the utmost importance than anything else in Hong Kong as an international financial center. I don't see any "direct" relationship between the openness of market and the electricity price of this industry which require huge capital investment and it would definitely curb the incentive of investors and shareholders in the long-run. Open the market doesn't guarantee lower price. I don't think simply open the market could kill all the problems that we currently encountered. Rather, Gov't could have a control on many aspects of power supply by keeping SOC. Therefore, I strongly think that we should keep SOC as it is now.

Regards,

Miranda

Dear Sirs,

**Comment On Future Development Of The Electricity Market
In Hong Hong --- Stage II Consultation Paper**

While the direction of the Stage II Consultation Paper is considered right, I would request the following issues be carefully reviewed :

- 1) On the issue of new supply sources from the Mainland, I have great reservation on whether the Mainland can be relied on with its poor records in supply reliability and adequacy;
- 2) The 10-year regulatory period and the 7 ~ 11% rates of return may not provide sufficient incentive for power utilities to invest. We can easily encounter power shortage like what the Mainland consumers are facing;
- 3) With regard to the extensive use of renewable energy (RE), I would think it would be very costly to do so. The exorbitant costs of RE will eventually be passed on to consumers like me.

Yours Faithfully,

Miranda Mak

**Stage II Consultation Paper On Future Development
Of The Electricity Market In Hong Kong**

Dear Mr. Ip,

I would like to support your proposals (e.g. your policy objectives, fixed asset approach and institutional setup) in the Stage II Consultation Paper.

I have some comments on the Stage II Consultation Paper: -

- (a) I support your proposed future institutional arrangement. The future institutional arrangement is similar to the existing SCA-type of arrangement or bilateral agreements between the Government and the Power Companies. I would like to see the future SCA-type institutional arrangement will continue to provide a world-class electricity system in Hong Kong with reasonable tariff.
- (b) I do not think increased interconnection is good to Hong Kong. It will increase the tariff pressure on consumers. Hong Kong consumers will pay more for increased interconnection that may bring little or even no benefit to Hong Kong.
- (c) I support your proposal in setting up a Tariff Stabilization Fund with a cap and a mechanism to return monies in excess of the cap to consumers. Such mechanism will help to stabilize tariff.
- (d) To lower the Rate of Return of the power companies from 13.5% to 7-10% will discourage the long-term investment of the power companies. We do not want power shortage and we do not want a system blackout in Hong Kong. I am willing to pay more for a reliable and safe electricity supply. Otherwise, how can we achieve the policy objectives in the Stage II Consultation Paper?

Yours sincerely,

Miranda Wong

Subject: Clean Air

Urgent Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. To protect my health, and the health of my family, I demand that the Government enhance the control of air pollution due to the power generation, under the future electricity market. This "future market" must not become the pretext for power companies to escape their social and environmental responsibilities to protect.

I recommend:

1. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be transferred to consumers;
2. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies-licences. Those who cannot achieve the caps should have the rate of return reduced;
3. An investment in renewable energy should earn an even higher level of permitted rate of return;
4. An Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
5. The targets and time-table for reduction of coal burning should be set;
6. Cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.
7. Demand management must be built into the profits of the company. There must be a mechanism where they profit if they can significantly reduce energy demand. At present they only profit from Increased demand.

I demand that the SAR Government bring back clean air to Hong Kong. I and my family need a breath of clean air.

BY FAX NO.2868 4679

Dear Sirs,

Re : Future Development of Electricity
Market in Hong Kong – Stage II Consultation

As a member of the citizens in Hong Kong and the above is an important issue affecting the future development and us, I would like to express some of my opinions.

Stability and reliability

To me, it is so proud of living in this modernize city which only occupies a point in the world map. I can enjoy all kind of sophisticated machine with some safety awareness. Of course, there may still have a chance to suffer from electricity suspension. It is very inconvenience. I am glad to note it does not happen in my living place – Hong Kong.

Air pollution

The air pollution in Hong Kong is changing worse although most of our industry moved northward in Mainland China. However, the atmosphere around still affects the nearby area especially in the northern part of Hong Kong. I doubt what fuel is used in those factories in Mainland China which also emit something smelly.

Safety

The technology for electricity supply is a high risk industry. The technician involved should be well trained and experienced. CLP, as far as I know, provided high quality of service in Hong Kong for a very long time. Every time I saw their technician wearing uniform will give me a sense of safety and good standard of services. We all understand that no one can chase for cost elimination at the expenses of safety.

... / 2

- 2 -

Environmental use of fuel

I am delight to note the 2 electricity companies in Hong Kong are now developing the use of natural gas to replace the existing coal generation and control the air-pollution. I think our government should encourage them to work out the technology instead of threatening them to cut prices.

Electricity charges

It is no doubt that as a citizen, we do not want to pay high tariff. May I suggest our government to negotiate with the 2 electricity companies while pay special attention to the safety and growth of our society.

Yours faithfully,

Betty Li

Subject: We want clean air!

Urgent Return Receipt

28/03/2006 14:26

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

MITCHELL SUSAN

Dear Sirs,

Subject: Comments on Stage II Consultation Paper on Future Development of
the Electricity Market in Hong Kong

Our predecessor Hong Kong Office was established in 1954 as representative office of Mitsubishi Corporation, Japan which now has more than 200 bases in approximately 80 countries worldwide. Judging from our experience doing business in Hong Kong for more than half century and comparing to other cities all over the world, we have highly appreciated the competitiveness of working infrastructure of Hong Kong including safe, reliable and stable electric power supply.

It is no doubt that such reliable electric power supply to the customers at the reasonable tariff in the last two decades are caused by successful operation of the current Scheme of Control Agreement, which allows the power companies in Hong Kong to make investment in the modern generation and transmission facilities with environment conscious manners at the reasonable rate of return.

In such sense, as proposed in the consultation paper, setting a lower rate of return and a shorter duration of regulatory regime makes the power companies in Hong Kong unable to make investment in such facilities from long term standing, safety and environment conscious point of view. Therefore, we believe that it is inevitable for you to keep the similar structure of Scheme of Control Agreement now under operating to maintain the glorious image of Hong Kong as a world-class financial and business centre as well as the beautiful city called the Pearl of Orient or One Million Dollars' Night View.

In conclusion, we hope that the public, the government and the power companies continue to have constructive discussion closely in order for all parties to work out a fair, balanced and durable regulatory regime.

Yours faithfully

Yoichiro MIYAMOTO
Director & General Manager

March 6, 2006

Dear Sirs,

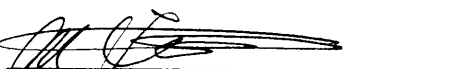

Future Development of the Electricity Market in Hong Kong

We are the Hong Kong office of a Japanese supplier and contractor. Our business is closely related to electricity supply and also power supply reliability is critical to our operations. With reference to the web-site of http://www.edlb.gov.hk/edb/eng/papers/electricity/pdf/StageII_CP.pdf dated December, 2005, please find below our views on the future development of the electricity market in Hong Kong:

- We supply reliable equipment and system and therefore we understand how the people's daily life depends on reliable electricity supply. Not long ago, blackouts in the USA, Europe and other parts of the world still marked painful memories to the people affected. We, in HK, enjoyed the highly reliable electricity supply and need not worry. This is a result of the excellent scheme of control agreement between the power companies and the HK government. This excellent scheme is so effective and we see no reason to have a drastic change.
- This high reliability is a result of sufficient and continuous investment in plant and equipment. The incentive comes from fair and reasonable return on investment. After the 2003 blackout in the US, utilities realise that reliability can only be maintained if predictable and sufficient returns are provided to the utilities of which the existing rate is to be maintained.
- The investment of power companies is huge and the project life cycles are long. A project usually needs a long lead time to plan and to build. The asset lives are also very long. Any regulatory period less than 15 years is considered unfair and unreasonable. The paper proposed to reduce the regulatory period to 10 years. It will mean asking the power companies to stop any investment and it will greatly affect the future supply reliability.

Please incorporate our views into your careful consideration and keep the present regulatory framework as little change as possible.

Yours faithfully,
Mitsubishi Electric (H.K.) Limited.

M. Tatsuki
Group General Manager
Social Infrastructure Division

Subject: 我要清新空氣

Urgent Return Receipt

致經濟發展與勞工局：

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來的電力市場，能夠加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我建議：

1. 電力公司的准許回報率需與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 各項減排設施（如二氧化硫脫除裝置）的開支與成本不能轉嫁給消費者；
3. 可再生能源的投資可享有較高的准許回報率；
4. 制訂減少燒煤的目標和時間表；
5. 設立能源管理局，統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

祝好

**Views/Comments on Stage II Consultation on Future Development of
The Electricity Market In Hong Kong**

Nowadays, we are enjoying continuous, reliable, safe and stable electricity supply with reasonable electricity tariff for our good living for a long period of time. This high quality and world-class electricity services in Hong Kong have to be maintained after 2008, end of the present SOC.

Investment in electricity generation and transmission facilities for future expansion, environmental protection, improvement of system reliability in fact takes a very long time to get the return back. It requires a huge amount of money and it is a very high-risk business comparing with others. I do not agree to shorten the period of the new agreement proposed by the Government from 15 years to 10 years.

Such a short agreement period imposes a high risk of return to the investor and is not fair. Moreover, this cannot provide a strong power to the investor to pay more on their old or depreciated facilities for system reliability improvement and environmental protection. Consequently, we will suffer from that! I consider that it is reasonable and fair to keep the new agreement period to at least 15 years.

As we all know that pollution in Hong Kong, especially air pollution is very serious in these years. We anticipate that the situation would become much worst if we do not take immediate action to solve this pollution problem. The two power companies in Hong Kong had made every effort and promised to invest on new advanced system technologies and equipment in their generation, transmission and distribution facilities so as to minimize the environmental impact and reduce the pollution levels to acceptable standards.

According to government proposal, the % return for the new environmental improvement facilities by the power company only accounts for 7%. It seems that the government do not encourage the power companies to invest more on environmental protection facilities. It's strange !!

Furthermore, as a high-risk business of long payback period, reasonable rate of return can offer high-level confidence to the power company to invest suitably on their facilities for future growth of electricity demand, environmental protection and system reliability and stability. The permitted rate of return should be sufficient to encourage the power company for long-term investment. I strongly believe that the present rate of return is reasonable and should remain unchanged.

Many people say that the electricity tariff in Hong Kong is very high. Comparing high cost in transportation, town gas and other living expenditure, I think that the electricity tariff is reasonable! Bear in mind that we are now enjoying a high quality, non-stop and stable electricity power supply.

At last, I also think that the government proposal to classify the asset into 4 different rate of returns is not helpful and make things much more complicated. Actually, the Government does not have a clear picture or definition on how to work out this 4-tiered rate of return percentage. Same as the present simple scheme, it is much better to adopt a single ROR for all types of asset in the new agreement instead of different ROR as proposed by the Government.

- End -

Subject: 回覆： electricity comment stage 2

Urgent Return Receipt

Please replace my former email with this new one for some typing error correction.

本人就政府於30/12/2005發表的香港電力市場未來的發展第二階段諮詢文件，有以下意見：

>

基於香港的經濟發展，人口密集及地域限制所衍生的各項需要，確保安全及可靠的電力供應是整個問題的前設，任何的建議應建基於這前設上，不利這前設的建議應有充份的理據及十足補救方案的條件下方能詳加考慮，以確保香港的未來發展不會有深遠的壞影響。

>

安全及可靠的電力供應是定位於不能低於現時的标准。就政府提出的文件中，下列各項政府的建議是未合乎以上的前設，這些建議不但沒有可靠的支持理據，亦未有作出補救方案，故十分不利於確保安全及可靠的電力供應：

>

1. 降低電力公司的投資回報率，雖然表面上有利市民大眾，但政府沒有充份理據證明降低的投資回報率，仍能吸引電力公司作適切的投資，以確保電力供應的安全及可靠，實在是一個不負責任的建議，市民不能盲目接受。

>

2. 電力公司的投資是長遠發展的項目，回報年期的不確定性只會增加成本。政府縮短協議年期，不但增加電力供應成本，同樣減弱電力公司作適切投資的誘因，以致降低電力供應的安全及可靠性。

>

基於以上的理由，本人不支持政府提出有關降低電力公司的投資回報率和縮減協議年期建議。請政府和電力公司商討作出合理的安排，不要將問題政治化，變成短視的政策，破壞香港的經濟繁榮。

Subject: Stage II consultation for Future Development of the Electricity
Market
 Urgent Return Receipt

Dear Sirs,

After reviewing the Proposal in Stage II consultation, I want to share my opinion in the field of environment protection. Environment pollution is a social problem. Combustion of coal from electricity generation is not the only source of air pollution. We should not put all responsibility on the existing electricity companies. Both government and citizen should also contribute their effort in environmental protection.

Government should cooperate with the power companies to improve the air quality e.g. introduce natural gas as the source of electricity generation and set up new control to reduce the emission of air pollutant during combustion. Without the help and support from government and citizen, the existing power companies can do less in the environment protection.

Thank you for your attention.

Regards,

M L Ho

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

To Economic Development and Labour Bureau,

I was recently travelling in some very remote areas in SW China and although their communities were very poor and behind other regions in overall development, most of the places (hotels, etc.) I visited or stayed in were using solar power for their water and heating needs and energy saving devices on their electrical supplies. As a "world City" we should be ashamed that we are not using or even able to produce and use cleaner sources and devices for our energy needs.

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly request the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation and other factors. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

Subject: RE: To whom it may concern
 Urgent Return Receipt

Dear Sirs

I am writing to extend my opinions in regards to the electricity open market issue. I don't think it is not a good idea to confirm the "ELECTRICITY OPEN MARKET" plan at this stage.

As Hong Kong is such a small and ! crowded city, it is hardly afford a small place to build another one or even more transmission networks. One of the reasons why Hong Kong Electricity has switched to lay their transmission cables through the tunnels is to avoid digging holes on the paths, disturbing residents surrounding and poluting the environment. In fact, laying cables through tunnels can enhance the reliability and to reduce the maintenance works and cost.

Allow me to say, if Hong Kong government insist to commit this issue, Hong Kong citizen might suffer as a result. It is unwise to make the decision carelessly and unfair to Hong Kong citizen. Hong Kong government really need to think twice in issuing proposal.

Best regards

MM Lee

Subject: comment on consultation paper on future development of the electricity market in hong kong stage 2

Urgent Return Receipt

Dear Sir,

I write to comment on the Consultation Paper on future development of the electricity market in Hong Kong stage 2. Please find below 3 points for your consideration:

1. Similar to water supplies, electricity is a commodity to be consumed for fulfilling basic needs in living. A reliable supply of electricity is crucial. Under the existing scheme of control, the two electricity suppliers in Hong Kong have been providing a reliable electricity supply for years.
2. Under the existing scheme of control, the electricity tariff chargeable to customers is reasonable and affordable.
3. The problem of air pollution by effluent discharge from the power stations should be tackled by formulating and execution of effective and appropriate environmental ordinance or regulations.

Based on the above, I would favour a new scheme of control same as the existing with only a very minute reduction in the permitted rate of return, if not unchanged.

Urgent Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: 我要清新空氣
 Urgent Return Receipt

致經濟發展與勞工局：

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來的電力市場，能夠加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我建議：

1. 電力公司的准許回報率需與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 各項減排設施（如二氧化硫脫除裝置）的開支與成本不能轉嫁給消費者；
3. 可再生能源的投資可享有較高的准許回報率；
4. 制訂減少燒煤的目標和時間表；
5. 設立能源管理局，統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

祝好

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

Mok Yuen Man Ritta

26 March 2006

Economic Development and Labour Bureau
2/F., Central Government Offices
Main & East Wings
Lower Albert Road, Central
Hong Kong

Dear Sir,

Stage II Consultation

I like to comment on the Stage II Consultation proposals.

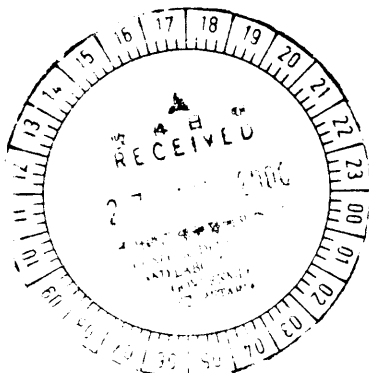

The 7-11% permitted rate of return is too low and the 10-year regulatory period is too short. This will discourage new capital to be invested in the power industry and the electricity supply reliability will deteriorate tremendously. It will greatly affect our daily life and the economy of Hong Kong.

I hope the government would keep the regulatory period at 15 years and increase the permitted rate of return to ensure that adequate incentives will be provided to power utility investors to invest in the electricity infrastructure.

Yours faithfully,

Molly Chan

2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;

Subject: Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

Hong Kong needs an integrated energy policy that comprehensively addresses energy supply and usage. Electricity generation has produced significant air pollution and contributes significant amount of greenhouse gas emission, causing global warming and resulted in climate change, the single biggest threat to our planet.

The Government's current proposals are outdated and could do far more to address these issues. I demand a future electricity market in Hong Kong that facilitates clean energy, and encourages energy conservation and efficiency, so that I am provided with electricity at minimal impact to my health, society and the environment.

I strongly recommend the Government to:

1. Set up a comprehensive and integrated energy policy for Hong Kong that properly addresses energy security, energy efficiency, protection of the environment and public health. The environmental costs of air pollution should be incorporated into policy making and the threat of climate change should be reflected into our electricity market.
2. Set up a regulatory mechanism to electricity companies to offer energy efficiency services so that I can improve the efficiency of my electricity usage. The government's current proposal is fundamentally flawed as the utilities continue to make the majority of their profits from selling as much electricity as possible, providing a major disincentive for them to seriously promote energy efficiency. The government must seriously examine the economic models that can overcome this barrier, rather than making small changes to the currently flawed system.
3. Ensure fair access to the power grid to promote for the energy supply by small energy producers, including renewable energy and other clean energy suppliers.

I urge the Government to take a far more active role in devising an integrated energy policy for Hong Kong.

8 March, 2006
Economic Development and Labour Bureau
2/F., Central Government Offices
Main & East Wings
Lower Albert Road, Central
Hong Kong

Dear Sir,

Comments on Stage II Consultation on
Future Development of the Electricity Market in Hong Kong

We are a financial institution operating in Hong Kong. We have been asked by Hongkong Electric to provide our views on a few issues related to the future development of the electricity market in Hong Kong:

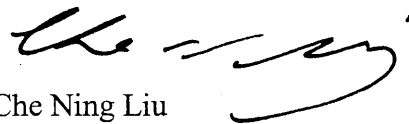

- (1) Supply reliability is essential and should not be compromised – Hong Kong enjoys a reliable and uninterrupted electricity supply which has helped secure its role as a financial centre. It would negatively impact our operations if this reliability was compromised.
- (2) Suppliers of electricity should be provided with sufficient financial incentives over a reasonable period of time to support continuous investment in electricity infrastructure in order to achieve reliable power supply.

We ask that you could consider our views as part of the Stage II Consultation on the future development of the electricity market in Hong Kong.

Yours truly,

Christopher Huang
Managing Director
Head of Asia Power & Utilities

3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: We want clean air , if the government care , people will care , loss of income will be involved because of a green policy but our health and life expectancy will gain, do you want to choose health or money ?

Urgent Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

mouret jean

Subject: 我要清新空氣

Urgent Return Receipt

致經濟發展與勞工局：

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來的電力市場，能夠加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我建議：

1. 電力公司的准許回報率需與其牌照中所定下的排放總量上限掛鉤，未能達標須大幅扣減其准許回報率；
2. 各項減排設施（如二氧化硫脫除裝置）的開支與成本不能轉嫁給消費者；
3. 可再生能源的投資可享有較高的准許回報率；
4. 制訂及加快減少燒煤的目標和時間表；
5. 設立能源管理局，統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

祝好

HK consultation.pdf

香港電力市場未來的發展

TO whom it may concern:

I had the following comments regarding the following topic inside the consultation paper:

新的電力供應源

來自內地的電力供應

- 1) 可再生能源
- 2) 為新的電力供應源所作出的準備
 - (i) 開放電網
 - (ii) 加強聯網

1) 可再生能源

Technically, renewable energy can be developed in Hong Kong only for supplying extremely small amount of energy. Wind power or solar energy will occupy large area, which is not cost effective in Hong Kong. So it can only be developed in China and supply back to Hong Kong or domestic energy use for small amount of demand locally. Other concern is the integration of renewable energy to the power grid. Improper connection to power grid will cause problem. Proper rule / law / regulation shall be produced and strictly follow. Power quality in Hong Kong is very important as a commercial centre. In addition, more incentive to power company can be considered to motivation propose. For the recent proposed location of CLP Power natural gas storage location, as a layman, I don't know whether it is possible to store it underground or under sea which are more safety and save more land. Maybe only the capital cost is higher.

2) 為新的電力供應源所作出的準備

- (i) 開放電網
- (ii) 加強聯網

We're now enjoying high quality, high security, customers service with reasonable tariff electricity service in Kowloon (I living in Kowloon). If open market in future or reduce the profit rate, by cost and effect, did the power company still can provide the above mentioned good services at a low-profit status. I'm afraid not. The two companies are now doing it good job. I don't want to change for the sake of change. If really open market, I'm afraid our Hong Kong Government can not handle it and how can our Government / other company governed by Government can run as an Independent System Operator (ISO) just like other country to control and monitoring the open electrically market??? Our Government had no experience about this. And other question is that after open market, is there any responsibilities / rules for the new comers to supply some rural areas which now using only small demand?? It will have large investment including overhead line, underground cabling and also excavation works. From the investor point of view, its really an low / non-profit account, they will only willing to supply large accounts such as container terminals, MTRC, KCRC, large resident areas, etc in which the supply network is really simpler. The two companies now have the responsibility to supply those rural areas (low or non-profit accounts) with no choice as I know.

Regarding the interconnection, I knew that CLP Power already have interconnection with China. But is it possible to have interconnection with HEC with submarine cables across the harbour or inside the existing tunnels? It will be more competitive with HEC if CLP Power can jump into the electricity market in Hong Kong Island.

And other concern is the environmental problem, once the market was opened, the transmission and distribution system are really difficulty to share or open. The only possible in Hong Kong is the alternative supply sources, that is the new generators. And the only possible area for investor to install new generators is China. The main problem is that the environmental control of new generators in China cannot be directly control by the Hong Kong Government. But the exhaust air from generators will directly affect us. All we know Hong Kong citizens already suffering from the poor air quality. Therefore, if open market is considered, regulation / rule regarding this issues shall also be considered.

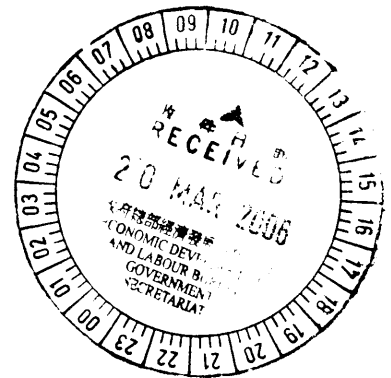

From: Mr. Chan
31/3/2006

Comments on 香港電力市場未來的發展

Dear Sir,

Basically I opposes the proposed period of new SOC. It's because the period of the new SOC is too short. Very often, the asset life cycle of power system related equipment is very long, say 20 years or even more. If each review period only consists of 10 years, then power utilities will not be willing to invest on the facilities since there are many uncertainties and risks for the future. This is unbeneficial to citizens since under-investment will affect the supply reliability of electricity. To be more reasonable, I think the period should be at least 15 years.

From: Mr. Chan

Economic Development and Labour Bureau
2/F., Central Government Offices
Main & East Wings, Lower Albert Road,
Central, Hong Kong

Dear Mr. Ip,

Currently both power companies supplying electricity to Hong Kong do a fantastic job and I am happy with services they provided. From their annual reports, both companies have attained supply reliability exceeding 99.99%.

Even there is no franchised supply areas for power companies, customers would know which power company is responsibility if there is power interruption. Once a third party granted access to the power grid, the responsibility of electricity supply will become blur and adequate and reliable electricity supply would not be ensured.

Additional players in the electricity supply services will need duplicate infrastructure that make the supply services more expensive, and introduce addition waste of resources, and extra costs due to third party grid access would also pass to customers via the tariff.

Hong Kong Electricity market is very small comparing with other open electricity market countries. Open grid access will need large amount of money to setup regulator agents and operation authorities. Finally, these costs will also pass to customers.

Third party grid access will require co-operation among current power companies in both Hong Kong and Mainland China, because they are competition in nature and they would not be co-operate easily. Eventually, this will lead to sub-standard supply services.

Finally, I would like to point out that the current electricity supply services are in excellent shape. It would not be a good idea to break up the current electricity services, introduce third part grid access and stirred up uncertainly in the industry. Finally, there will be more power interruptions.

Thanks for your attention.

Yours sincerely,
Mr. Cheung

Subject: 香港電力市場的未來發展第二階段諮詢

Urgent Return Receipt

To Hong Kong Government,

電力市場未來發展第二階段諮詢回覆函在附件中。

Mr.Choi

--篠-力初.doc

香港電力市場的未來發展第二階段諮詢

我並不贊成開放電力市場。要建立一套完善的供電系統需要數百億元的龐大資金。如果開放市場，電力公司之間為了競爭，會盡量減低成本，維持最少的售後服務及設備維修，更不會進行長遠的投資，備用電量只會保持在最低的水平，這樣會造成供電質素下降或經常停電，這是香港市民不能接受的。所以，如果電費能維持在合理的水平，我是贊成在現有的能源政策不改為妙，小改亦可，大改不能。政府應做好監管工作，不要大意讓電力公司做大資產值。如果電力公司能像現在一樣維持足夠而合理的備用電量及供電可靠性，我希望現時的供電模式能維持下去。再以價格作比較，香港的電價比其它已展的地區和國家只位於中游位置，價格尚算合理；如加上供電之可靠性和穩定性，兩電之表現可說是上等。

現在的利潤管理政策保障了投資者有固定的利潤回報；令電力公司肯投資在一些昂貴的發電及輸電設備上，香港的發電及輸電設備未必是全世界最先進的，但肯定比美國及加拿大這些先進國家好。如果開放了電力市場，電力公司為了追求利潤，最直接的辦法自然是停止投資先進設備、減少維修測試；繼續使用一些應退役或不環保的機器。後果是我們很快便沒有穩定可靠的電力，亦帶來環境污染惡化，到時受苦的是香港市民。

利潤管制計劃並不是最好，但在香港是可行的，不必取消。政府應做好監管工作，同時須有能力檢討利潤之幅度於合理水平（市民和電力公司也可接受的水平）；立例規定電力公司須要盡快應用再生能源，香港的發電廠全部都依賴進口的化石燃料(83%)，如果世界的化石燃料價格大幅波動、或供應發生問題，香港的電力供應便很快發生問題。民生及經濟會受到巨大的打擊。風力、水力和太陽能在世界各地已經是在實際使用，香港在這方面實在是落後得很！到現在只得一部風力發電機。希望政府規定發電廠能盡量投資在使用再生能源的設備上，令香港將來的電力供穩定可靠，價錢合理而又環保乾淨。謝謝！

Future Development of The Electricity Market in Hong Kong
(Stage II Consultation)

Dear Mr. Ip,

With reference to your stage II consultation on the future development of the electricity market in Hong Kong, I would like to take this opportunity to express my personal views on this subject.

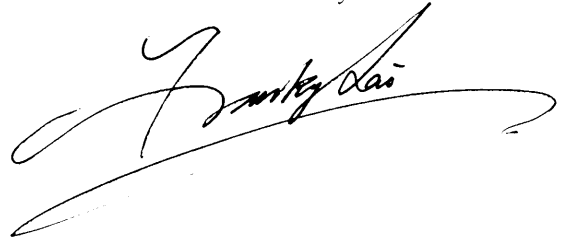

I am in IT profession and my company provides innovative IT and telecommunication network infrastructure to our clients. A reliable electricity supply is one of the key factors allowing my company to stay successful in the business. In my view, a reliable electricity supply comes from the continuous investment by the power companies in Hong Kong. Under the present Scheme Of Control Agreement (SCA), the two power companies in Hong Kong provide us a stable and reliable electricity supply at reasonable costs. Hence, I trust that the current regulatory regime balances the interests between the customers and the power companies.

After reading your consultation paper, I feel that the proposed 7-11% return is much lower than the current return of 13.5%. Lowering the rate of return to this level is considered unattractive from investor viewpoint for continuous investment to maintain a reliable electricity system in Hong Kong. Besides, shortening the regulatory period to 10 years will also increase the investment risks. I am afraid that the 10-year regulatory period and the 7-11% rate of return will discourage investment from the power companies in the electricity supply infrastructure in Hong Kong. Without adequate investment in the electricity supply infrastructure, the reliability of electricity supply in Hong Kong will deteriorate. Also, this would have severe impact on the economy of Hong Kong. Frankly speaking, the reliability of supply cannot be

compromised and I don't mind to pay more in order to enjoy the quality of electricity supply services presently provided by the power companies.

I urge the Government to maintain the present regulatory system after 2008 so that sufficient incentives can be provided to the investors for continuous investment in the electricity supply infrastructure to ensure reliability of electricity supply.

Yours faithfully,

A handwritten signature in black ink, appearing to read "Franky Lai", with a long, sweeping underline that extends to the right and then loops back under the signature.

Subject: Stage 2 public consultation on future electricity market of Hong Kong

Urgent Return Receipt

Dear Sir/Madam,

I would like to express my opinion about encouraging the power companies to adopt renewable energy and allow grid connection of renewable energy installations:

(1) I agree that mechanisms should be designed to encourage the power companies to generate some of its electricity from renewable energy sources.

(2) Although the renewable energy resources are limited in Hong Kong, due to its limited land or sea area, we should endeavour to exploit the local renewable energy resources first, before utilizing the renewable energy resources of other places.

(3) In this connection, the power companies should be obliged to allow and facilitate connection of renewable energy installations to their electricity grids, whether such installations are big or small.

The power companies should remove all their impediments to grid connection, and more than that, should readily allow renewable energy installations to connect to their grids and to readily adjust their networks to suit such connections without charging the applicant for such adjustments. Hong Kong allows the power companies to supply electricity to the citizens and to make money out of it, the power companies should naturally allow citizens or companies to connect renewable energy installations to their grids with ease.

(4) The power companies should be obliged to buy the electricity generated by such installations with net-metering. As explained above, the available renewable energy resources are limited in Hong Kong and so net-metering will have small impact on the power systems even if such limited resources are all exploited.

(5) For small renewable energy installations generating electricity of up to a fraction of the site's demand, a simplified procedure should be designed to allow operation of such installations in parallel with the grid. For example, if an ordinary household wants to install just a few hundred watts of photovoltaic panel, the applicant should only need to fill in a simple form, signed by a qualified electrician, in order to connect the panel to the house wiring, without having to sign the lengthy and complex agreement or to be involved in difficult technical discussions with power company's engineers.

(6) The power companies should be allowed to "import" renewable source electricity ONLY AFTER having exploited the resources in Hong Kong. Even for imported renewable source electricity, the requirement should be that the renewable energy power station (e.g. wind farm) should be DIRECTLY connected to the Hong Kong grid through dedicated transmission lines. We should not allow the renewable energy power station to inject power into the Mainland grid and claim that the power is carried to Hong Kong through the grid ties. That is nonsense. If that is permissible, then we can allow the power companies to "buy" renewable source electricity from a great distance away, say, Xin Jian. Furthermore, the power company should demonstrate that it is NOT taking the prime sites of, say, Guangdong.

Guangdong or anywhere else also has its need for renewable energy. We should not take away other's prime resources. We can, say, build offshore wind farm just outside Hong Kong waters and bring the electricity to Hong Kong, but we should not build wind farms at locations that Guangdong itself also has a strong interest in.

(7) Finally, I strongly support what is said in the consultation document about renewable energy and about grid connection, and wish that my comments above will be incorporated to augment the proposals.

Mr Hui

Subject: Electricity Market in Hong Kong - Renewable Energy from Mainland

Urgent Return Receipt

Dear Sir/Madam,

I would like to express my opinion about importing renewable energy from Mainland.

In the case of electricity import from conventional generation sources, the amount of electricity import can be SCHEDULED some time ahead, say one day.

In the case of, say, wind farm in Mainland, we CANNOT schedule the amount of electricity to be generated. We cannot "wheel" the power from the wind farm through the Mainland grid to Hong Kong. The output of a wind farm all depends on the wind. The output fluctuates greatly, from 90% in one moment to 10% in the next. It is impossible to import 90% in one moment and 10% in the next, through the Mainland grid. The control system of the tie-line doesn't allow that. Therefore, it is necessary that the wind farm be connected DIRECTLY to the Hong Kong grid through its own transmission line.

The notion of building a wind farm in Mainland, injecting the output energy into the Mainland grid, and import an equal amount of kWh from the Mainland grid some time later, is ridiculous. The power does not match in real time. So, what we are importing is stable electricity, that means fossil-based electricity. We inject clean electricity into the Mainland and import dirty electricity back!

Furthermore, the Mainland grid has to absorb all the fluctuating changes in the power output from the wind farm, and their generating plants must backup the fluctuations in real-time. If the wind farm output increases by 50MW in one moment, the generating plants in the Mainland must reduce output by 50MW, and vice versa. The tie-line exchange between Hong Kong and the Mainland cannot react in the way like the generating plants in the Mainland. So, our grid has to do nothing at all. This is ridiculous.

The conclusion is that if we really want to import wind farm electricity, the wind farm must be directly connected to the Hong Kong grid through its own transmission line. Thanks.

Mr Hui

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Sign: Mr. J. Bahl

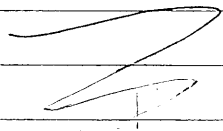

To: Mr. Yip

I support the existing system of Scheme of Control as it could ensure the stability of power supply in Hong Kong.

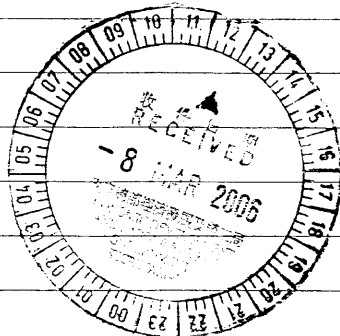

The return of profit should be kept in between 10% and 13% because it can give more spirit for the

investor to put more resource and financial supports on improvement of environmental emission continuously. Hence, I prefer all established systems still be remained unchanged.

Mr. Joe Au

Subject: Comments on Hong Kong Electric' s Management Plan Agreement

Urgent Return Receipt

Dear Sir,

Please find attached file for your record.

Thanks & regards,

Mr Kan

Karshun Kan.doc

Suggestions concerning Hong Kong Electric's Management Plan Agreement

I, Kar Shun Kan, have lived in Hong Kong for forty years. I witness Hong Kong's transformation from poverty to prosperity. To keep up with current standards, quality and stable electricity supply is needed. It is hard to imagine what Hong Kong will be if no electricity is supplied to hospitals, exchange squares and the MTR etc. The consequences may be disastrous. At present, electricity expenses are economical compared to town gas, management fee and transportation expenses etc. In addition, Hong Kong's economy is recovering. To maintain Hong Kong Electric's profit control standards until 2008 is a wise step. This is because Hong Kong will remain one of the best places for investment from international perspectives. Nowadays, in the electrical transmission and distribution facilities, the investment normally requires over billions of dollars. Such facilities have been applied in Hong Kong for more than three decades. Hong Kong Electric demonstrates full confidence in the government and her intention to serve local citizens. If the contract period is below 15 years, it will not be fair, contradicting with Hong Kong rules of investment.

In the asset classification, this is impractical. Say, environmental asset part which return is lower. While everybody is fulfilling environmental responsibilities, returns have been lowered. This is directly opposite to what has been expected. Unless the government encourages Hong Kong's electrical suppliers to increase investment on environmentally protective facilities, this situation cannot be improved.

It is self-deception if you believe you can protect the environment without raising electricity expenses.

Concerning approved returns, I puzzled how it falls between 7% to 11%. I suspect the government may be under the pressure of political parties. They always criticize about every move of the government and want to deduce the electricity prices. I sincerely hope that the government will emphasize on the stability of the society and not amending government policies for the sake of merely amending policies themselves. Local citizens will suffer in this way.

I conclude that 1) maintain 15 years contract period to power utility company; 2) increase asset investment return to encourage application of environmental electrical facilities; 3) permitted returns should not be lowered than 13.5%.

Thank you for your kind attention.

Subject: Re: Government's Stage II Consultation Paper on Future
Development of Electricity Market in Hong Kong

Urgent Return Receipt

Dear Sir/Madam,

With reference to Government's Stage II Consultation Paper on Future Development of Electricity Market in Hong Kong, I would like to express my points of view here:

Bilateral agreement type proposed to continue - AGREE

Asset based return to continue - AGREE

Revise tariff setting mechanism - DISAGREE because investment incentive is essential to maintain reliable electricity supply to customers.

Reduce return level, differential return - DISAGREE because it will lead to distorted investment decisions.

Shorten duration of agreement - DISAGREE because it will increase uncertainties in long-term investments and fuel supply commitments on capitally-intensive power industry.

Introduce performance based penalty - DISAGREE because there is no clear policy direction on fuel mix and also environmental regulations have to be consistent with energy policy.

Your sincerely,
Mr. Kwok

Stage II Consultation

Dear Sir,

I am writing to present my comments on the Consultation Paper. Please find below my comments for your consideration:-

(a) I do not support the idea of importing power from Mainland China. A reliable source of electricity is very important to Hong Kong. Hong Kong should build its own generation sources to supply our demand.

(b) I do not support the idea of increasing interconnection between HEC-CLP. Current interconnection arrangement serves Hong Kong well and we should cut any unnecessary expenditure. New interconnection means extra spending and the cost will be passed to the consumers.

(c) I do not support the idea of third party grid access. Unclear responsibilities between electricity suppliers may lead to poor supply reliability. Also, there is no past record of the supply reliability provided by the new power suppliers. The reliability of supply has no guarantee.

(d) I have reservations in supporting the idea of extensively use of Renewable Energy in order to meet the 1-2% RE target in 2012. The cost of RE is high and the production of electricity is small. Also, the cost will be passed to the consumers.

!

葉樹堃局長：

香港電力市場未來的發展
第二階段諮詢

本人中電控股有限公司股東，欲就貴局正進行的第二階段諮詢提供意見。

管制計劃協議一向行之有效，數十年來公司一向以合理電價為客戶提供安全可靠的電力供應，並在環境保護方面表現出色。因此，管制計劃協議其實已成功落實政府制定的電力政策目標。

閣下在諮詢文件中提出的以下建議，本人並不贊同：

10年規管協議年期： 電力基建涉及長達數十年的投資週期，規管協議年期不宜過短。請維持現時15年的協議期。

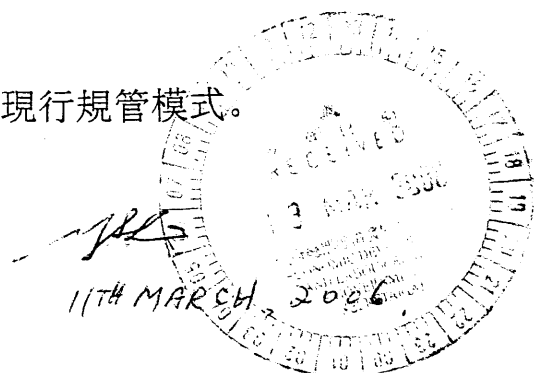

調低准許回報率至7-11%： 諮詢文件建議7-11%准許回報率，沒有提供任何論據支持。建議的回報率過低，不能接受。

以資產類別訂定不同的回報率： 以資產類別訂定不同回報率的做法，令規管機制複雜化，會引起不必要的爭拗，亦會增加行政成本。現時以單一准許回報率為基礎的規管協議簡單而清晰，應該保留。

雙重減排罰則： 現行的空氣污染管制法例已訂下超越排放上限的罰則，若建議電力公司未能達減排目標又再被扣減回報率，則變成雙重懲罰，對電力公司不公平。

所有電費調整都必須得到政府批准： 電力公司應有權利就政府已批准的投資項目賺取准許回報，未來規管若容許政府全權決定可否調整電費，則容易受制於政治壓力，增加投資風險。

未來規管安排，不應為變而變。請考慮延續現行規管模式。

Dear Sir,

Stage II Consultation

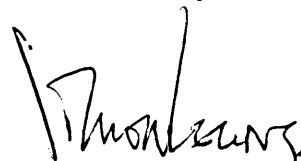

I like to comment on the Stage II Consultation paper.

The proposed 7-11% permitted rate of return is too low and the 10-year regulatory period too short to attract the two power companies to invest huge capital in their electricity supply systems.

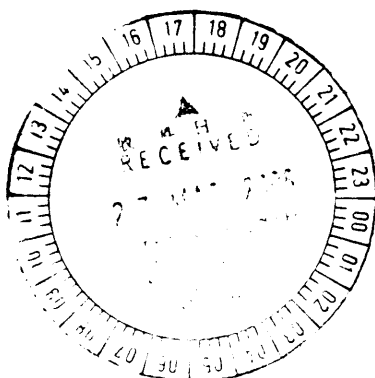

Without adequate investment, we will suffer from power interruptions just like the Mainland is suffering now. This will seriously affect our daily life and the economy of Hong Kong.

The government should increase the permitted rate of return and keep the regulatory period at 15 years so that sufficient incentives can be provided to the power companies for building the electricity infrastructure.

Yours faithfully,

Urgent Return Receipt

Response to Stage 2 Consultation.doc

Mr. SS Ip
in Aberdeen

Response to Stage 2 Consultation – Proposed Regulatory Arrangements on pages 31 onwards

Paragraphs 2.27 to 2.73

- (I) Safety Regulation – agreed
- (II) Environmental Regulation
 - first corky dot – agreed
 - second corky dot – agreed *other than* when you said “ ... to minimize the costs to consumers ...”, **it should not be at the expense of reliability** which Hong Kong enjoys by having been able to attract business prudent and quality investors
- (III) Economic Regulation
 - To continue by means of bilateral agreement – agreed
 - 1. Regulatory Instrument
 - i. 10 years too short due to the nature of power industry – 15 years as in the past is appropriate. **10 years + option to extend for 5 years bring unnecessary (if not unacceptable) uncertainty to the investors.** Realistically Hong Kong is not ready to deviate from the existing SoC model in at least 15 years’ time
 - ii. new proposal of annual tariff review (together with approval of tariff adjustments being required) (note: return under this Proposal is permitted (rather than guaranteed)) cannot be acceptable to prudent investors. **Requirement for Government’s approval of annual tariff adjustments cannot work unless Government guarantees return with public revenue.**
 - iii. Permitted return to be adjusted every 5 years makes the bilateral agreement **even more uncertain** than the proposed “10-year fixed term”.
 - 2. Return
 - i. two-pronged approach – agreed **provided that performance target has to be practical**
 - ii. to continue NAFA basis and to tighten excessive capacity mechanism – agreed
 - iii. to provide financial incentives for increasing use of RE, etc. – agreed **provided that there should not be cross-subsidy at the expense of other consumers** – Not clear how “gains” can be quantified
 - iv. principle of performance based incentives/ discentives agreed **provided that performance targets should be practical with benchmark with comparable jurisdictions.**
 - v. emission caps imposed/ tightened are unrealistically low and SPL are issued/ renewed for 2-year minimum.

Power companies are not able to plan the long-term business as necessary. Also, it is against the law should EPD set emissions levels (which are subject to the test of “best practical means”) which the licensees can possibly reduce the emissions to levels below those allowed in the SPLs.

- vi. to adjust the rate of permitted return every 5 years just turns the bilateral agreement a much shorter and more uncertain contractual arrangement. – **There can be a backlog quickly of disputes between Government and the power companies as there are too many re-openers during the term of the contract**
 - vii. **differential rates of return** for different parts (e.g. power generation vs. emission reduction) of the business **do not make sense as both of them are equally important.**
3. Tariff
- i. fuel charges, etc. pass-through – agreed.
 - ii. Who is to adjudicate that the tariffs are cost-justified, reasonable, etc.. If **Government** were to decide such tests, it **can virtually rewrite the contracts** during the term of the bi-lateral agreements.
 - iii. **Contact can simply fail for uncertainty. Also, affordability is highly controversial.** In jurisdictions where the Authority takes into political consideration (like affordability), the market proves to have failed. Consumers who are less able to pay can change there behaviour (say, more disciplined consumption and exploring alternative for substitute for heating/ cooking purposes) can change their electricity bills (and so affordability) quickly.
 - iv. regular tariff review (*but not approval*) agreed.
 - v. to maintain Fuel Clause Account, etc. – agreed.
 - vi. the 12.5% “cap” of the Fund balance which started after the 2003 Interim Review seems to be reasonable for tariff stabilization purposes.
4. Institutional Setup – proposals agreed

Subject: Comments on the Future Development of the Electricity Market

Urgent Return Receipt

To: Economic Development and Labour Bureau

I am a Hong Kong citizen and I would like to register my concern at the level of air pollution in Hong Kong, in particular, that caused by the power stations.

The CE has correctly identified this as one of the major priorities of his administration. The current review of the Future Development of the Electricity Market in Hong Kong must also make the control and substantial reduction in the pollution caused by power stations a major priority.

I have the following comments and requests:

1. Hong Kong has unique problems in terms of geography and population density which exacerbate the effect of pollution and thus emission standards must be more stringent to bring the overall level of air pollution to an acceptable level.
2. The Power companies should be set reducing caps in permitted air pollution emissions. Those caps must be ambitious and set (not match) new world standards to reflect the unique problems in Hong Kong.
3. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
4. The investment in renewable energy should earn a higher level of permitted rate of return;
5. The targets and time-table for reduction in coal burning should be set and must be tight if we are to match the CE's objective for a substantial improvement in air pollution;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Comment on "Future Development of the Electricity Market in Hong Kong Stage II Consultation"

Don't believe it's a simple rule that a competitive electricity market will absolutely benefit to ultimate customers and even a society at all.

At present, CLP is providing highly safe, reliable supply with reasonable price. Also, their customer service and social responsibility are quite good.

The present permitted return of about 13% is reasonable. This permitted return is not too high compared with other commercial companies, even their business operational risk is high. If the investment placed on environmental friendly plant, the return should be much higher.

Also, the contractual period of 15 years is acceptable since it would warrant the long term capital investment to sustain the growth of electricity demand.

I don't support to open market after 2008.

Mr. Wong

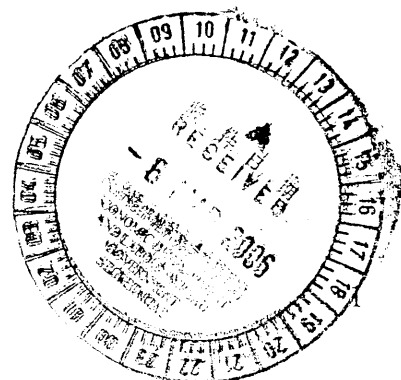

To: Economic Development and Labour Bureau
2/F, Central Government Offices, Main & East Wings
Lower Albert Road, Central, Hong Kong

From: Mr. Wong

My view on “The Future Development of the Electricity Market in Hong Kong” Stage II Consultation

1. Electricity supply reliability is the most important element that maintains the prosperity and safe living of HKSAR. While we are able to afford the electricity tariff which is only a small part of our expenses, I do not want to have any reduction of supply reliability as a result of the change of the electricity market. There were many blackouts occurred overseas in the de-regulated markets, and rolling supply interruption in Guangdong. There must be many problems in the de-regulated markets and insufficient electricity equipment in Guangdong. Therefore I fully support to maintain the system of the current Scheme of Control. I do not support opening the electricity market. And HKSAR should have sufficient generation sources that under our control for our own use – not to rely on others.
2. I support to adopt a fixed asset approach using ANFA as the base because it provides incentives for investment in the electricity infrastructure. However, I suggest the rates of return for all types of asset should be the same because all of them are important. It should be the responsibility of all people in the world to pay for cleaner air. HKSAR citizens should pay for it, Guangdong citizens should pay for it. If everybody in the world does the same, we will have a good earth to live. Therefore the return on emission reduction should be the same as other type of equipment.
3. In order to have a good electricity infrastructure, we have to ensure that sufficient incentive to be given to power companies for investing the electricity equipments. Therefore we should give a reasonably attractive return and longer term of agreements to power companies. The existing 15 years term is reasonable. If the government forces to provide less return and shorter year term of agreement, it could result a lose-lose-lose situation. Power companies will lose as a result of less profit, government will lose as a result of failing to establish a good electricity market structure, the citizens will lose as a result of insecure electricity supply.

15th March 2006

Economic Development and Labour Bureau,
2/F., Central Government Offices,
Main & East Wings,
Lower Albert Road, Central,
Hong Kong

Dear Sir,

Comments on Stage II Consultation
On
Future Development of the Electricity Market in Hong Kong

With reference to the above consultation paper, I would like to express my views as follows:

1. Reliable electricity supply

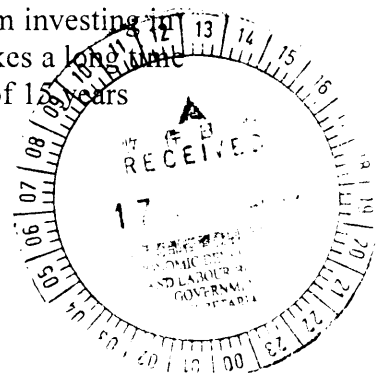

Being a world financial centre and a densely populated modern city, reliable, safe and efficient electricity supply is of paramount importance to all of us. As such, sufficient incentive should be given to power companies to invest adequately in electricity infrastructure so as to ensure uninterrupted power supply. To rely on the Mainland for electricity supply is absolutely unrealistic as there are frequent power shortages and/or interruptions in most of the provinces. In fact, CLPP is currently supplying huge amount of electricity to Guangdong areas and I wonder how the latter can export power to Hong Kong.

2. Rate of Return (7% - 11%)

The proposed ROR cannot give sufficient incentive to power companies to invest adequately in electricity infrastructure which may lead to power shortage and degradation of supply reliability. Given the highly reliable power supply and excellent customer services, I consider the current electricity tariffs are reasonable and affordable by the majority especially when compared with other modern cities.

3. 10-year Regulatory Period

A short regulatory period may discourage power companies from investing in the electricity infrastructure as it is very capital intensive and takes a long time for cost recovery. I consider that the present regulatory period of 15 years should be maintained.

In conclusion, the present arrangements in the SCA regime have been proved to be successful and cost-effective and I would strongly recommend to keep any changes to the present regulatory regime to an absolute minimum.

Yours faithfully,

To: Economic Development and Labour Bureau
From: Mrs. Catherine Chan
Re: Stage II Consultation on Future Development of the Electricity Market in HK
Date: 29th March 2006

On the Consultation Paper:

- (i) I am supportive of the current SCA-type of arrangement or similar bilateral agreement, using an asset base for calculating return.
- (ii) Reliability and safety of electricity supply is of paramount importance and should continue to be the primary objective for the future development of the electricity market.
- (iii) I agree to importing electricity from the Mainland if:
 - a. the Mainland power companies agree to use environmentally friendly fuel to generate electricity for HK – but then how does the HK Government police the activities of these Mainland companies? Even if they use clean fuel for HK, how can we stop them from burning dirty fuel for power generation for the Guangdong consumers? If so, HK will be badly affected by more pollution from the Mainland.
 - b. the Mainland power companies are governed by the same regulatory framework as the two power companies, otherwise it would not be fair to the power companies who have served HK well for many years.
 - c. the Mainland power companies can guarantee the same reliability of electricity supply to which we have been accustomed – at least 99.99% reliability.
 - d. bringing in competition would result in cheaper electricity prices for HK consumers – lower prices not just for a few months to attract customers, but long term.
- (iv) I am generally supportive of measures to protect the environment, particularly the introduction of renewable energy, but not if it costs a fortune to build, generates little power and spoils the natural beauty of our countryside. I am also concerned that some consumers will have to subsidize the electricity charges of others whose electricity is generated by renewable energy (eg Mongkok consumers subsidizing the cost of producing electricity for consumers in Tseung Kwan O whose electricity is generated using wind). The huge cost may not justify the minimal improvement to the environment.
- (v) To improve our environment, Government should encourage the use of natural gas by the power companies. But if CLP Power's gas field is drying up, then something has to be done quickly. They say that they want to build an LNG terminal and are waiting approval from the Government. Please sort this out with them quickly, so that they can burn more gas. At present, it would be irresponsible for them to switch to coal knowing that their gas field is depleting. Realistically, they need a balanced fuel mix to avoid blackouts, as do all power companies.

- (vi) If we accept that improving the environment is important, then we should not punish the companies for installing emission reduction facilities by cutting their returns. Nor does it make sense to reduce the contractual period to 10 years, if the idea is to encourage them to invest in equipment to maintain reliability of supply to HK and to help cut emissions. Fifteen years is not too long if we are talking about millions or billions of investments. Without the knowledge that they can recoup the outlay or earn a reasonable return, why would they invest.
- (vii) My electricity charges account for less than 2% of my monthly income. Are tariff levels too high? I cannot honestly say "yes" because I am not greedy. I am content with the current tariff levels and the companies' permitted return. They are there to make a decent profit, not run a charity.

I understand that the Government is under immense pressure from the politicians and green groups (many of whom are more keen to win publicity/votes than dealing with the matter rationally) to drastically modify the SCA, to demonstrate that the Government is in control. HK seems to have developed a culture, on the one hand, of shooting companies with high performance, and on the other, dishing out benefits to those who least deserve them.

On this issue, the Government should be sufficiently bold to act rationally and consider carefully whether the stated Policy Objective would be achieved by implementing the proposals referred to in the Consultation Paper. I seriously doubt that.

Subject: Re: Future Development of the Electricity Market in Hong Kong 每
Stage II Public Consultation 販誠?薯序 芻 腔追程 每 菴媪蕙儻
鼠?焯?

Urgent Return Receipt

Hi,

Please find below some of my opinions :

Lower electricity tariff is good, but my family and I have concern that this would mean a sacrifice of supply reliability - which we do not prefer :

We're aware that the entry \$ for enery industry is much higher than the bus company. So if the permitted return for the bus company is 10%, but the proposed return for the 2 power companies are < 10%, then we are worried that the 2 power companies would not invest as they need to or even not maintain a good level of service - e.g. delay the replacement of power engines, etc. In this case, this would lower the supply reliability, which we do not want to see this happen. Hence, to be more sensible, maybe the permitted return for the power companies should be maintained at a reasonable level rather than what the media said, 7%, 9% or 10%.

Subject: We want clean air!
 Urgent Return Receipt

27/03/2006 19:11

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Subject: Comments to Stage II Consultation Paper on Electricity Market of Hong Kong

Urgent Return Receipt

Dear Sirs,

I do have one point to say about the Stage II Consultation Paper on Electricity Market of Hong Kong. Lots of people would comment on tariff control, control on electricity companies' rate of return and so forth. There bound to be pros and cons for each suggestion, depending whether one is looking at the whole from consumers' point of view or investors' point of view. There is literally no right or wrong. However, I found that

two suggestions in the Paper which are quite good, at least they are fair to both consumers and investors and they reduce some kind of external dependencies when determining tariff price.

The first one is setting up of a Fuel Clause Account with fuel cost borne by consumers. No one wants to bear the cost of a product but it cannot be avoided. In order to stabilise tariff, such reserve can be used at the time of high oil price. When oil price is lower than the price charged by electricity companies to consumers, the surplus can be added to the reserve.

This is a smart move.

Secondly, setting up of a Tariff Stabilisation Fund with a cap and a mechanism to return monies in excess of the cap to consumers is another good measure to further stabilise tariff, making it a win-win situation for both the consumers and electricity companies in long run.

I strongly advise HKSAR government to help setting up these two funds with the two electricity companies and the usage of the funds are to be monitored by the Government.

Mrs. Chu

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Sign: Dina Archer

To: Economic Development & Labour Bureau

From: Mrs. Doreen Wong

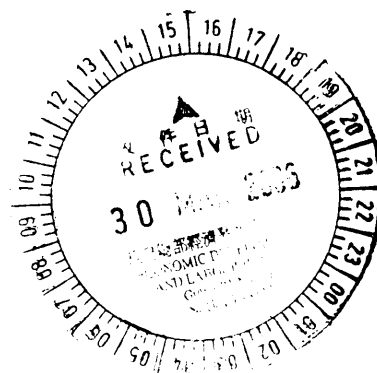

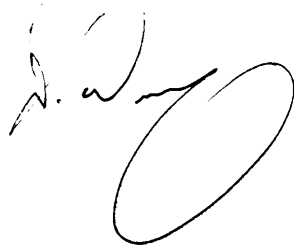

Date: 29th March, 2006

On the Stage II Consultation, I just wish to Government and the public to be realistic about the whole situation. Introduction of renewable energy will reduce emissions but because it is an unreliable energy source, the power companies will still have to maintain backup supply so ended up, we will have to duplicate resources and the cost will then be passed through to us. Having renewable energy also have its own costs e.g. it will damage our natural landscape, produce noise and expensive to build. I wonder why we need to look into this.

I am against the concept of polluter-pay. Polluter pollutes because of demand from users. It is unfair to squeeze the power companies on their return when ultimately power is being "enjoyed" by end-users. Therefore end-users should shoulder the costs for emissions reduction. The Stage II consultation presents a double penalty system for power companies on emissions which go against the international best practice and is illogical.

The length of the SOC should remain the same given that it will allow the companies to make long-term plan to improve air quality. Shorter period will prevent them from making investments.

Look at Town Gas, it is unregulated and it can still provide a good service and could give tariff reduction. Could the Government stop micromanage and start think what's the best model for the power industry long term. Simply monitoring the development of the China market is hardly a convincing strategy !

Subject: Stage II Consultation

Urgent Return Receipt

08/03/2006 22:13

Dear Sirs,

I would like to express my views on the Stage II Consultation Paper on the Future Development of the Electricity Market in Hong Kong. I think the current regulatory framework has served Hong Kong well and I am in support of having reliability, safety and efficient electricity supply be the primary objectives for the future development of the electricity market.

Part A Policy Objective

Hong Kong will benefit from a clear energy policy and other consistent policies on environment protection and sustainable development.

Part B New Supply Sources

(I) Supply from Mainland

YII I am in favour of the Government adopting a cautious approach to the potential of power supply from Mainland. Any integration should be carefully planned to ensure supply reliability; economic benefits to consumers and a level playing field.

YII Any liberalization of the power market should be conditional upon technical and regulatory alignment of the local and mainland power markets and be implemented in a gradual manner.

(II) Renewable Energy

YII The deployment of RE should be encouraged but these projects must be considered in a practical and economical manner. The output from RE may at best amount to about 1-2% of existing generating capacity. Further the Government should also recognize that the construction and operation of any renewable energy source in our countryside will also destroy our natural environment.

YII Hong Kong has to accept the reality that the potential of meaningful RE in Hong Kong is very limited. Pushing RE regardless of economic or practical factors may lead to unnecessary cost to consumers.

YII Clearer policy on RE for each RE source should be given by Government.

(III) Arrangement to Cater for New Supply Sources

YII Learning from the experience of the US blackout, I am not in favour of opening grid access unless a clear, co-ordinated roll-out plan has been established and agreed between grid owners, power companies, new suppliers and Guangdong Government. To be successful, this arrangement will require careful planning to ensure clear allocation of responsibilities, a high degree of co-ordination and strong supervision.

Part C Proposed Regulatory Arrangements

(I) Safety Regulation

No comment.

(II) Environmental Regulation

YII Emissions are a consequence of public demand for electricity so I am not in favour of giving a lower return for emission control investment as a penalty against power companies. Instead, power companies should be given a higher return rate so that they will be encouraged to install more emission control devices to protect

the environment. As a consumer, I will be willing to pay more for better air quality.

YII In addition to the power industry, I think emission control regulations should also be tightened for other industries. Emission caps should be applied to the transport sector especially on buses and ferries. Government should also consider granting tax incentive for the importation of environmental friendly cars.

YII I have reservations on the proposed linking of emission performance to return. If power companies are forced to shut down some of their stations in order to meet the emission caps causing blackouts in Hong Kong, the consequences will be very serious.

(III) Economic Regulation

YII Government ought to recognize the long-term investment time horizon for power generation and transmission assets. If the duration for the next term is 10 years plus 5 more at the option of the Government, it will be too short and may prevent the power companies from continuing to make necessary investments.

YII Any incoming electricity player must come into play with the same legal and regulatory framework to create a level playing field. There should be statutory fitness criteria for all power companies operating in Hong Kong.

YII The current tariff level is affordable and I am opposed to lowering tariff at the expense of reliability and the environment.

YII The differential rate of return is not easy to understand and it would be helpful if the Government could explain the logic behind it. The consequence of this proposed return arrangement may be against consumers' interests because power companies may focus more on projects that will give them the highest return. I would therefore prefer a uniform return rate for all types of assets with further incentive for investment in emission control equipment.

(IV) Institutional Setup

The existing set up has served Hong Kong well and should continue.

Kind regards,
Mrs. Elaine Chong
Mid-levels

Subject: Comment on Stage 2 consultation

Urgent Return Receipt

Dear Government officials,

I have following comment in Stage II paper :

1. I oppose the approach of Open market because :

a. With the generation source in China, it cannot guarantee reserve electricity for HK. If there is a surge in demand, HK may suffer in drop in reserve electricity that may be lower than enough.

b. No role to take action on the need of electricity for HK. Unless government spend money on building infrastructure for the gap of market supply and market need.

c. If even network resources duplicated, that means land and money is duplicated. And may not result in lower price.

d. Currently, customer may have subsidy when selling electricity to China. In open market approach, there's no such subsidy.

2. I think the policy should encourage sufficient investment which is important to stability of HK electricity.

Regards,
Mrs. Fung

Subject: 我要清新空氣

Urgent Return Receipt

致經濟發展與勞工局：

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來的電力市場，能夠加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我建議：

1. 電力公司的准許回報率需與其牌照中所定下的排放總量上限掛鉤，未能達標須扣減其准許回報率；
2. 各項減排設施（如二氧化硫脫除裝置）的開支與成本不能轉嫁給消費者；
3. 可再生能源的投資可享有較高的准許回報率；
4. 制訂減少燒煤的目標和時間表；
5. 設立能源管理局，統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

祝好

mrs.hui

Subject: We want clean air!

Urgent Return Receipt

To: Economic Development and Labour Bureau

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand to enhance the control in air pollution due to the power generation, under the future electricity market. The future market must not become the pretext of power companies that escape from the social and environmental responsibilities. I recommend:

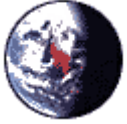

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those who cannot achieve the caps should have the rate of return reduced;
2. The cost of all the emission reduction facilities, including Flue Gas Desulphurisation (FGD) facilities should not be shouldered by the consumers;
3. The investment in renewable energy should earn a higher level of permitted rate of return;
4. The targets and time-table of reduction in coal burning should be set;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in renewable energy development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I demand the SAR government to bring Hong Kong blue sky and give us a breath of clean air.

I look forward to hearing from you.

Yours sincerely,

Mrs. Wong

經濟發展及勞工局

敬啓者:

香港電力市場的未來發展

正如第一階段諮詢的結果，大部份香港市民都認為可靠、安全及有效率的電力供應至為重要。開放電力市場的賣點是可以令市民小交電費。但眾所周知內地的電力供應無論在穩定性、可靠性以致環保各方面均不可以給我們信心，萬一出現如加州大停電大停電的情況時，我們不是損失重大，作為國際金融中心，香港絕不能承受大停電的後果。

大幅調低回報率，這可能會令電力公司需要降低成本，而把一些高風險的工作以低價外判給其他經驗不足的公司，好有可能產生供電質素問題和勞工糾紛。

Dear Sirs,

Enclosed is my views on Future Development in the Electricity Market in Hong Kong -
Stage II Consultation for your consideration.

Best Regards,

MS

Views on E-Market - Stage II.pdf

Views on Future Development in the Electricity Market in Hong Kong
Stage II Consultation

Policy Objective

I agree with the Policy Objective to ensure that the public can continue to enjoy reliable, safe and efficient energy supplies at reasonable prices, and to minimize the environmental impact caused by the production and use of energy.

Bearing in mind this objective, the policy should not result in lowering the present high standard of safety, security and reliability of electricity supply.

New Supply Sources

Currently, it is a common understanding that the security and reliability of power supply from Mainland is in doubt. Connecting an unreliable supply to the existing highly reliable grid will only downgrade the quality of our existing electricity system. It will be too aggressive to consider using power supply from Mainland at this stage.

In addition, un-controlled granting of grid access to new supply source will create similar problem and therefore careful consideration shall be made before putting in action.

If RE is to be pursuit, it is preferable to rely on the existing two power companies who have proven record in HK rather than any new comer.

Proposed Regulatory Arrangements

Sustaining the safety and environmental standard are important. The government should continue to work closely with the power companies to ensure safety, minimize emission and improve in environment protection. To do so, the cost of electricity generation will inevitably be increased, either due to increased capital investment for emission reduction facilities or the use of more expensive natural gas as fuel. However, the newly proposed rate of return scheme is discouraging this kind of investment (granting lowest return). It is difficult for people to understand the rationale behind.

The proposed rate of return (7-11%) is a drastic cut from the existing 13.5%. It is highly recommend that the government should negotiate with the power companies to reach a mutually acceptable rate of return. Otherwise, the power companies may feel losing the incentive to continue investing in the power supply system and ultimately result in unreliable power supply or even power shortage.

Moreover, as the power business is a capital-intensive investment, I doubt the advantage of shortening the agreement period from 15 years to 10 years. If the agreement period is shorten to 10 years, the only choice for the power company is to get their money back in that period. i.e. the electrical tariff will increase rather than decrease.

Current electricity expense only cost 2% of our general household monthly expenses, which is only a minimal portion compared with other expenses like transport, gas, water, etc. With current price, we enjoy excellent reliability and security, why do we need to risk our electricity supply for a small amount of money every month?

I believe that Government should aim at providing a stable and prosperous environment for the citizen instead of creating uncertainty.

To Whom It May Concern:

RE: PUBLIC CONSULTATION ON PROPOSED NEW SCHEME-OF-
CONTROL AGREEMENT ON ELECTRICITY POLICY

I strongly disagree on the proposed new Scheme-Of-Control Agreement on electricity policy. The new Scheme-Of-Control agreement has reduced the incentives for the power business to invest on their capital assets with a view to provide the reliable electricity supply. It will affect Hong Kong in the following ways:

1. Most Hong Kong citizens are living at high-rise whose lives heavily depend on electricity – escalators, water supply, refrigerator, etc. If we do not have a reliable electricity supply in Hong Kong, we will suffer from poor hygiene problem if there is any accidental black-out. With the probable invasion of avian flu worldwide, the poor hygiene environment in Hong Kong will be a very good place to spread out the disease.
2. Hong Kong is a famous commercial centre in South East Asia and one of the gateways to China. Hong Kong's success is attributable to the best corporate governance and logistic support among the China's cities. Reliable electricity supply is one of the key factors of the logistic support for companies in Hong Kong. If the Hong Kong Government and citizens are so myopic and selfish and only considered their short-term or microscopic benefits, fighting to death to lower the electricity tariff in Hong Kong, Hong Kong will lose her competitive advantage over other China's cities. The result is catastrophic and businesses will move their offices to other cities, and eventually our GDP decreases, leading us to recession.
3. The proposed Scheme-Of-Control agreement represents a double-penalty system: the government will penalize power companies for not moving towards renewable power, by reducing their rate of return, then fine them if they do not meet emissions targets. This is an unnecessary burden on business and goes against international best practices, which rests on market-based solutions. This act will also deter other businesses from investing in Hong Kong.

As such, I think the proposed new Scheme-Of-Control Agreement on electricity policy has the following shortcomings:

1. 7%-11% rate of return is too low
2. the 10 year contract term is too short
3. the double-penalty system is against the international best practice
4. calculation of variable rate of return based on different asset is inapplicable and costly

Being a Hong Kong citizen living on Hong Kong Island and a business owner in Hong Kong, I am fully satisfied with the present Scheme-Of-Control Agreement and the world-class electricity supply in Hong Kong which provides us a comfortable and secured living environment.

I am therefore writing to express my point of view and would like the Government to think carefully before working out the final Scheme-Of-Control Agreement and take every prudent measure to safeguard the benefit of the Hong Kong economy.

Yours sincerely,

(Ms) April Wong

Dear Sir/Madam,

Comment On New Supply Sources Of
The Stage II Consultation Paper

I am writing here to comment on your proposed new supply sources.

1. With the high economic growth in Mainland, power supply from the mainland would be unlikely.
2. I highly support the use of RE in electricity generation in Hong Kong and this will create job opportunity in Hong Kong. However, investment of RE in Mainland paid by Hong Kong electricity consumers is not preferred.
3. I strongly believe that self-sufficient power supply in Hong Kong is important and this is the only way to have stable and reliable power supply. I support the connection of local RE to the power grid of the existing two power companies but I do not prefer any power supply from Mainland.
4. I think that increased interconnection between CLP Power and HEC would induce little benefit but large burden to electricity consumers. Therefore, it should not be considered.

Yours faithfully,
Ms. Carmen Yee

Subject: Re: Future Development of the Electricity Market in Hong Kong 每
Stage II Public Consultation 販誠-薯序 帮 腔追程 每 菴媪蕙僂鼠-
燒

Urgent Return Receipt

I refer to the stage II consultation and has only one comment.

I agree that SCA is going to stay to suit the importance of electricity in Hong Kong. What I don't agree is the idea that lowering the Rate of Return is going to benefit Hong Kong and the customer.

As pointed by many people, lowering the ROR is not equal to lowering the tariff.

Taking the reality of the existance of the two power companies as commercial operation into consideration. Their existance is to make profit and they can afford to hire the most knowledgeable group of people who know the electricity industry in the Hong Kong context inside out. Their explicit objective is to maximize share holders value, not maximizing tariff.

Based on SCA with given ROR and with unlimited power to raise tariff, they would do all their best to bargain with the authority to approve the increase in profit by increasing asset and resist all pressure from the authority to reduce the rate of increase of overall asset, even when there are obvious reason between the time of approval of the plan and change in environment. The over built of Black Point Power Station is an obvious example.

Based on the same balance of power between the regulator and the regulated, the same tuck-of-war will continue. However, there are always other means to increase the power companies profit other than raising tariff. Take for example, if the ROR is going to increase 0.1% per year for the next 15 years from its current value of 13.5%. If the power company is satisfied with increase in profit of 11% in the next 15 years (from 13.5% to 15%), all they have to do is to spend just sufficient investment that can off-set the aging of the asset and compensate the asset reduction due to depreciation. If the load of Hong Kong is not growing, then we are going to enjoy the same level of supply reliability as the additional capital expenditure should off-set the aging effect and keep the assets in their current state. In this way, there is no need to increase tariff at all for the next 15 years, yet the power companies get what they want. The consumers also gain as the tariff will remain the same for 15 years. Hong Kong gain by spending the least in importing electrical equipment.

Then take the example of keep the ROR at its current level, and if the power company wish to have 11% increase in profit in the next 15 years, they have to increase the asset base by 11% by all means and I'm sure given the market power and talent pool of the private undertaking, they will ultimately get it. Based on the same no growth scenario, the tariff has to increase by 11% and in return, the consumer will be given something better for the extra 11% tariff increase. What's more, Hong Kong as a whole has to spend more (import more from other country) in order to meet the extra expenditure of the two power companies. There is an extra outflow of hard earn money for Hong Kong for something which we are already having the best.

It is now clear that by reducing the ROR, and if the power company is going to finally get 11% increase in profit in 15 years, the asset has to increase more than 11% just to offset the reduction in ROR. The tariff has to increase by 11% and Hong Kong has to spend an even larger amount of money to other country to get an even better quality of electricity. A lose-lose-lose situation for all parties.

The above analysis is based on the same level of talent between the regulator and the regulated. If in the past 45 years of SCA the balance of power between the regulator and the regulated has produced the Black Point Power Station case, why should the regulator think that there will be a big shift in the balance of power to stop the last scenario from occurring?

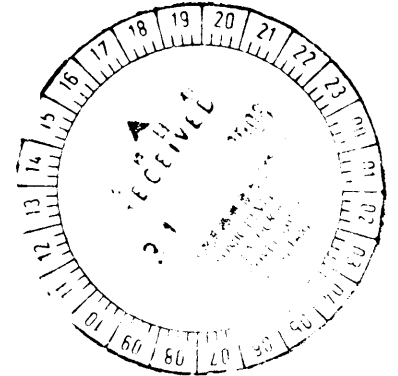

Increasing the ROR is suiciding for the Government but will not hurt anyone in real term. Reducing ROR is taking poison for Hong Kong. Perhaps the final solution is a compromise of reducing ROR, say, 0.1% per year for the next 15 years with the option that in the mid-term review the rate of reduction or rate of increase can be +/- 0.1%.

Hong Kong

Dear Sir,

**Re: Stage 2 Consultation On
Future Development of The Electricity Market in Hong Kong**

With reference to the consultation on the future development of the electricity market in Hong Kong, I would like to express my views on this subject.

I am an administrative personnel working in a reputable private medical associates in Hong Kong. Everyday, my office needs a constant electricity supply to support the function of air-conditioning, lightning, heating facilities and a lot of electric appliances. In fact, not only my office needs a constant electricity supply, I believe that all of us in Hong Kong depend on an uninterrupted electricity supply to assure the safety and comfort for our dense urban population.

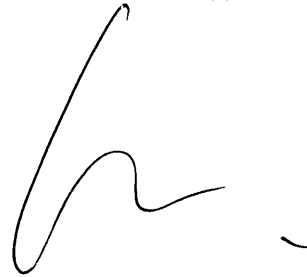

During the years, the stable and reliable electricity supply becomes part of our basic necessity to support our daily living. The current high reliability of electricity supply enjoyed by the people in Hong Kong reflects the success of the current scheme of control agreement in assuring the timely investment made in the electricity infrastructure. I satisfy with the present regulatory regime that brings the high standard of electricity services to me.

I believe that your proposals on shortening the regulatory duration and reducing the rate of return to 7-11% in the post-2008 regulatory regime are the major obstacles in reaching a successful agreement with the power companies. I consider that your proposed 7-11% permitted rate of return is too low and cannot lead to sufficient investment in the electricity infrastructure after 2008. Besides, shortening the regulatory duration to 10 years will also increase the investment risks borne by the power companies and discourage them from investing in the electricity

infrastructure in the long term. This implies that the overall electricity supply reliability will be downgraded as a result of insufficient investment.

In view of the paramount importance of electricity supply reliability, I hope that the government could work closely with the power companies in order to achieve a mutually accepted agreement for the post-2008 regulatory regime.

Yours sincerely,

A handwritten signature in black ink, appearing to read 'Christie Clever'. The signature is fluid and cursive, starting with a large 'C' and ending with a small flourish.

27 March 2006

Dear Sirs

Stage II Government Consultation on the Future Development of the Electricity Market in Hong Kong

Future regulation of the electricity industry in Hong Kong is a matter of great importance to all our citizens. I prefer to maintain the existing electricity system due to current reliable & stable electricity supply; excellent customer services and acceptable and reasonable electric price provided by CLP.

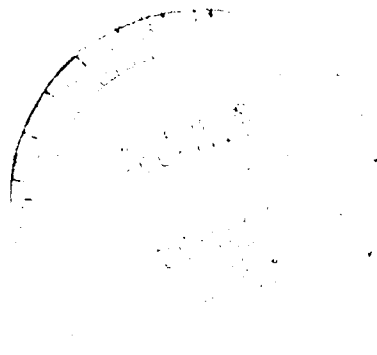

For the consultation paper proposals, I have the following comments for your consideration.

- ◆ Environmental disincentives
- ◆ Unclear plans to migrate to a competitive market
- ◆ Duration of the regime too short
- ◆ Inadequate incentives to encourage appropriate investment, while risk profile will be increased substantially

Yours faithfully,

E Chan (Ms.)

lau fion

To: Economic Development and Labour Bureau

Stage II Consultation on Future Development
of Electricity Market

=====

I do think that Hong Kong has become less attractive
for investors.

We should always bear in mind that business is
business. The Government should not shorten the
regulatory period to 10 years and reduce the permitted
rate of return for the power companies. This could be
harmful to Hong Kong as it will only discourage
further investment by the power companies. As such,
quality and reliability of supply might be affected.

High quality and reliability of supply is of paramount
importance for Hong Kong as an international city.
Changes may not always be good. Given the expense on
electricity consumption is only about a few percent of
the household disposal income, I think the current
tariff rates are reasonable and far lower than the
expenses on transportation.

I believe it would be better not to make any changes!!

Ms. F. Lau
31/3/06

Hong Kong

Re: Stage II Consultation

Dear Sir,

I would like to have the following comments on your Stage II Consultation proposals.

1. Return based on average net fixed asset and excess capacity penalty

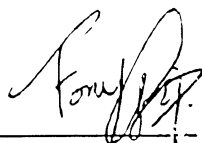

I support the Government maintaining the policy of assessing the return of the power companies based on their average net fixed asset and using the existing excess capacity penalty mechanism to prevent excessive capacity expansion of their assets.

2. 7-11% Permitted Rate of Return and 10-year regulatory period

However, the 7-11% permitted rate of return seems too low and the 10-year regulatory period seems too short to attract long term enormous investment required by the electricity supply industry.

The Government should provide sufficient incentive to the power companies to ensure they will put in adequate investment on their electricity supply systems.

Yours faithfully,

Ms. Fony Yip

Subject: Higher Electricity Bill According to the Stage II Consultation Paper

Urgent Return Receipt

Economic Development and Labour Bureau
2/F., Central Government Offices
Main & East Wings
Lower Albert Road, Central
Hong Kong

Dear Sir/Madam,

Higher Electricity Bill According to the Stage II Consultation Paper

!

According to the Stage II Consultation Paper, I am afraid that I have to pay higher electricity bill for less reliable power supply in the future.

- Electricity import from Mainland
- V The power market in Mainland is volatile and the power is not secure and reliable.
- Renewable energy (RE)
- V We all know that RE energy is expensive.
- Grid access
- V A regulatory authority or an extra government bureau will be needed. As a taxpayer, do I ! have to pay for it?
- Increased interconnection between CLP Power and HEC
- V As an electricity consumer, I have to share the cost of this increased interconnection.

As a taxpayer and an electricity consumer, I opine that the items mentioned in the above should be neglected.

Yours faithfully,

Ms Ho

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those that cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates greenhouse gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government set up a concrete and clear energy saving target;
5. An Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I respectfully demand that the SAR government return to us the blue sky I so used to love in HK, and a breath of fresh air.

Sign: _Jan Campbell_

Dear sir,

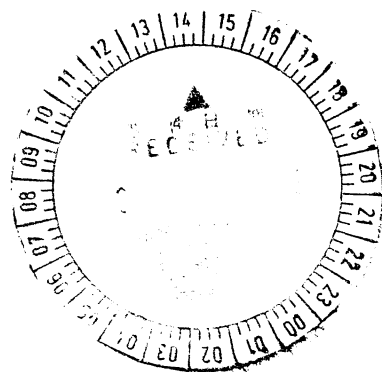

In response to the Stage II Consultation, I would like to make two main points here,

1) It is really ridiculous for opening up electric sources from the Mainland. I would like to express my worries on the stability and reliability of the electric supply. The history of electric supply in the Guandong Province was not good enough to give me confidence.

2) Substantial development is valuable to Hong Kong, but the Government have to encourage the electricity providers, not to reduce their rate of return. 7-11% is too low.

Ms. K.T. Cheng

Lower Albert Road, Central
Hong Kong

Dear Sir,

Ms Kelly Kui

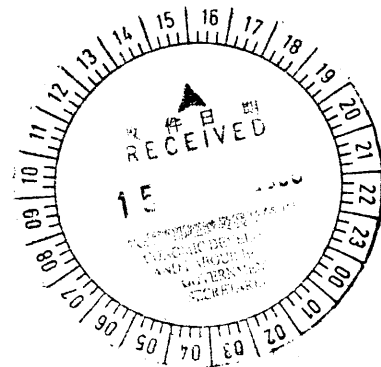

Consultation (Stage II)

I write to oppose your proposal to impose 100% penalty on excess capacity. I cannot accept the arrangement to penalize the power companies because they cannot forecast the future electricity demand and have over-prepared because they want to ensure customers can enjoy reliable supply.

I worry that this arrangement will affect electricity reliability by failing to attract essential investments. As reliable supply is essential to our society, I opine that your proposal to impose 100% penalty should not be implemented.

Yours faithfully,

Kelly Kui

24th March, 2006-03-22

Dear sir/madam,

Re: Personal View on Hongkong Electricity Market Development

I write to express my view on the captioned issue. I believe that the reason why Hong Kong is one of the highest competitive countries in the world is that Hong Kong has the sophisticated infrastructure including sound financial environment, good legal system as well as the reliable facilities and infrastructure for both economic and commercial activities.

Being a Hong Kong resident, I really wish to see the stability in the current environment. Of course, nobody wants to pay high fees for electricity. I accept what is reasonable. For me, I want stability and reject uncertain changes which may affect Hong Kong future especially we are talking about our stable infrastructure and environment. I can't believe that it is an easy thing to introduce new electricity supplier into Hong Kong. It may bring us great uncertainty as well as unsafe, unreliable electricity supply. I am afraid of the unclear consequences. In addition, will it bring to extra administrative costs and other costs that we are unable to afford? How long does it take to set up the infrastructure that is compatible with what the current electricity suppliers can do. I think the current investors may not be willing to stay in such an unfavourable environment. If they escape from the Hong Kong market, will the electricity supply be affected in the long term while there may not have instant supply of stable electricity to Hong Kong citizens. Therefore, I believe that to maintain the stability in electricity supply is both beneficial to the social as well as the commercial sector. I am not quite sure if the government should still retain the existing tariff adjustment mechanism. But I believe that the mechanism should be reasonable to keep the existing electricity suppliers providing us stable electricity supply.

I sincerely hope that the government will consider the long-term benefits for the society. I am sure we all want lower electricity fees but we want more on stable electricity supply. Please consider it seriously.

Yours faithfully,

Ms. K. F. Chan

Subject: Comments on Stage 2 Consultation Paper
 Urgent Return Receipt

Dear Sir / Madam;

After reading the Paper on “Future Development of the Electricity Market in Hong Kong: Stage II Consultation”, I would like to comment as follows:

1. Most of the viewpoints received from Stage I consultation indicates that reliability and safety of electricity supply are of paramount importance. Therefore, Government must be very careful with the issue “ New Supply Sources from the Mainland”.
2. Due to the rapid economic growth of Guangdong, the tight electricity supply situation in Guangdong will continue. We cannot rely on new supply sources from the Guangdong which has power shortage as it will jeopardize the supply reliability in Hong Kong.
3. If Hong Kong imports electricity from Mainland China, I can't imagine what will happen in case of operating problems or disputes. The responsibility to ensure reliability and safety of electricity supply will be blurred.
4. To cope with the tight electricity supply situation in Guangdong, there is a lot of highly polluting small thermal power plants with low efficiency, which are still generating electric power in Guangdong. These power plants are the severe polluting sources in Guangdong and their emissions are of the major contributing factors for the deteriorating air quality in the Pearl River Delta Region. We should not choose to buy the polluting electricity from China even the price is cheap.
5. So far I know, the power companies in Hong Kong are already subject to penalty when they fail to meet the emission caps under the Air pollution Ordinance. The new proposal from the Government regarding the rate of return to be reduced if power companies fail to meet the emission targets simply implies that there will be a double penalty. Obviously, this is not fair to them. Furthermore, the electric power industry involves a long term investment and since the future emission caps has not yet been set, it is impossible for power companies to prepare their long term planning.

I hope that the current highest reliability and safety of electricity supply in Hong Kong will not be ruined due to some inadvertent changes.

From : Ms. Kwok Kwai Chun

Ms LAM PUI YUNG

Economic Development and Labour Bureau,
2/F., Central Government Offices,
Main & East Wings, Lower Albert Road,
Central, Hong Kong

Dear Sir,

Stage II Consultation on the Future Development of the Electricity Market in Hong Kong

As a shareholder of the Hongkong Electric Holdings Ltd., I would like to express my views on the following 5 key proposals outlined in the Consultation Paper.

1. The Regulatory Period Should Remain 15 Years

The proposed 10+5 year regulatory period is actually for 10 years. It is too short for huge and lumpy investments in 30-35 year service life assets to recover costs and to earn reasonable return.

2. The Permitted Rate of Return (ROR) Should be Sufficient to Incentivize Investment

The proposed 7-11% ROR is far too low and not commensurate with risks of the power industry. It cannot attract huge and long-term investments required.

3. The Proposed Asset Classification Should be Discarded

The proposed 4-tiered ROR arrangement for different asset classes is counter-productive in solving the air quality problem. Besides, it unnecessarily complicates the return issue, and increases bureaucracy and administration costs.

4. Emission Penalty Should be Fair and Reasonable

The proposed emission penalty mechanism which links return with emission target is a double penalty. It is unfair and unreasonable.

5. The Existing Tariff Adjustment Mechanism Should be Maintained

The proposed requirement of Government approval for annual tariff reviews will subject our legitimate return under the agreement to undue political pressure.

As an investor of the Hong Kong's power industry, I am proud to have helped deliver safe and reliable electricity supply, together with exemplary environmental performance, at reasonable price in the past decades under the Scheme of Control Agreement. I trust that you will give due recognition to the proven effectiveness of the Agreement when mapping out the way forward for the electricity market. I also hope that my views will be considered and reflected in the ongoing consultation exercise.

Yours faithfully,

LAM PUI YUNG

115 200 001 YONG

The Secretary,

Lower Albert Road, Central,
HONG KONG.

Dear Sir/Madam,

Future Development of Electricity Market in Hong Kong
Stage 2 Public Consultation

In response to the Government Stage II consultation process, I, the undersigned, would like to put forward my opinion and comment as a shareholder of CLP Holdings for your kind consideration.

While fully agree with the Government's objectives of providing a safe, reliable supply of electricity at reasonable cost with low environmental pollution, there are certain areas in the proposal that I find it impossible to agree:

1. The Return of 7.11% is too low and the duration of the Regime of 10 years is too short.

Investments in the provision of electricity calls for enormous capital expenditure investment that entails significant risk when the duration of the Regime is too short. On the other hand, when the Regime is prolonged to at least 15 years, the risk and the cost are reduced accordingly.

Over the past 8 years, CLP Holdings has kept tariff unchanged; in addition there has been rebates totally HK\$3 billion. There has been an annual investment of 6 billion each year. During the 8-year period, the price of coal has increased many folds.

The drastically lowering of return would unfairly cut shareholder value by 30-50%.

2. Environmental pollution objective

The greatly reduced environmental pollution objective entails enormous cost. The use of gas instead of coal would increase cost by 30% and would endanger the reliability of supply.

In my opinion the Government should carefully discuss with CLP Holdings so as to determine what level of pollution is desirable, commensurate with the cost and thereby strike a balance between these two factors rather than fixing a penalty cause, without giving the reasons, for such stipulation and without discussion with CLP Holdings.

3. The interests of the shareholders, the stake holder (Exxon, USA) and the employees of CLP holdings should be protected.

Electricity accounts for only 1.3% to 2.7% of the monthly household expenditure in Hong Kong. Dramatically reducing the tariff via the cutting of the permissible return from 13.5 to 15% to 7-11% would benefit the public to a very small extent, whereas the shareholders would sustain a loss of 30-50% in terms of dividend and share value. CLP Holdings profit on electricity investment in Hong Kong increases only by 3.8%^{to 3.8%} and as only around 60% of the profit is distributed, much of the retained profit is utilized in maintaining the current standard of electricity supply. On the other hand, other household cost, e.g., rental, cost of purchasing a flat accounts for a much higher proportion. There are, of course, simple methods by which such cost could be reduced, but such measure would hurt the interest of the land developers. I, therefore, see no reason why the Government should so unjustifiably jeopardise the interest of CLP shareholders, so as to benefit the public by such a small extent.

In this connection I would also like to add that offices in the Central rental increase in rental as much as 70%, and yet the Government has not taken any action, even though such hectic rise would be detrimental to the investment atmosphere in Hong Kong.

- 2 -

The investment risk and opportunity of the electricity supply have not changed while Hong Kong was under the British rule, and it has been the general policy of the SAR Government to retain the previous situation as those policies are set by same or mostly the same Government officers.

I, therefore, see no reason why there is such a drastic change both in the permissible rate of return and the period of the Scheme of Control.

4. Institution of a competitive market

In my view it is difficult for the newcomer to provide electricity supply at such high quality and at the present low and reasonable cost. The Government should ensure that the newcomer must not cherry pick large customers at the expense of the general public. The supply grid and the related infrastructure are the properties of the CLP Holdings, and the building of a separate one seems infeasibility both in term of cost and the causing of chaos to the traffic and to the public.

In the light of the facts and reasons as advanced above I do hope that the Government would reconsider the new proposal and retain the previous Scheme of control, which would ensure reliable supply of high quality Electricity at a reasonable cost, without unjustifiably jeopardise the interest of the shareholders, stake holders and the employees of CLP Holdings.

Thank you.

Yours faithfully,

Ms LAM PUI YUNG

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: 電力市場未來發展第二期諮詢文件

Urgent Return Receipt

31/03/2006 00:33

致經濟及勞工局局長：

本人是一間食品公司的市場推廣部經理。有關貴局月前發表的電力市場未來發展第二期諮詢文件，本人有以下意見：

- 香港市場細小，不能形成一個有效率的競爭市場。較合理的安排是創建一個粵港跨境市場，但觀乎現時情況，兩地還需要一段長時間才可在電力技術及環保標準等方面融合，取得協調。故此政府需制訂詳細計劃，為開放市場創造條件，而不應在條件未成熟時開放市場
- 就算條件成熟，競爭市場的軟件也十分重要，公平的競爭法規可以確保所有競爭者能在公平的環境下競爭
- 目前國內電力短缺，而且兩地的水平相差太遠，與國內電力市場融合要從詳計議，不應在沒有藍圖及時間表下貿然推行。

Subject: 網上行動回應《香港電力市場未來的發展》

Urgent Return Receipt

致經濟發展及勞工局，

身為香港的一份子，我非常關注發電廠對空氣與環境所造成的污染。我強烈要求未來電力市場的監管機制，加強管制發電過程帶來的各種污染，不要成為電力企業逃避承擔社會與環境責任的幌子。我要求：

1. 電力公司的准許回報率須與其牌照中所定下的排放總量上限掛勾，未能達標須扣減其准許回報率；
2. 可再生能源的投資可享有較高的准許回報率；
3. 我們支持發展可再生能源，但反對把焚化爐 -- 會產生溫室氣體 -- 視作可再生能源；
4. 節約能源是最直接、最根本的方法，是一道可以有效避免浪費和減少污染的良方，政府必須訂定整體而清晰的節能目標；
5. 積極研究設立能源管理局，製訂整全的能源政策，並統籌電力市場在經濟、社會、環境與區域發展各方面的計劃與配合；
6. 加快粵港兩地發展可再生能源的合作，包括訂立區域的風能發展藍圖。

懇請特區政府能為香港帶來一片藍天，給市民一口清新空氣。

Dear Sirs

Stage II Government Consultation on the Future Development of the Electricity Market in Hong Kong

After reading the consultation paper proposals, my view and comments are as follows.

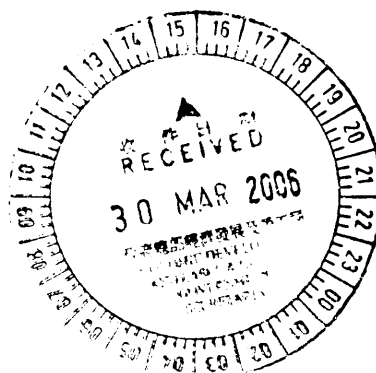

- ◆ Duration of the regime too short
- ◆ Unclear plans to migrate to a competitive market
- ◆ Environmental disincentives
- ◆ Inadequate incentives to encourage appropriate investment, while risk profile will be increased substantially

Conclusion

The current performance of the power company – CLP is satisfactory due to reliable & stable electricity supply; excellent customer services and reasonable electric price.

Yours faithfully,

S. Yu (Ms.)

Subject: Comments on Opening Up Power Grid
 Urgent Return Receipt

Dear Sirs,

I am writing to give my view on the Stage II Consultation on Future Development of Electricity Market in Hong Kong. My main concern is the seemingly optimistic view on the Mainland's electricity supply.

From news available to general public, the demand for electricity in Mainland China has been increasing drastically on a year-to-year basis but the supply has not been increased in the scale comparable with the demand, resulting in shortages in some of the areas. Even electricity rationing had to be introduced in some area. Even the government in Mainland China cannot provide a definite answer as to when the shortage can be overcome. Even when they say they can overcome the problem, there is no implication that they would have abundant supply that they can export to Hong Kong, as already stated in your consultation paper.

If Hong Kong is to open up the power grid (i.e. the transmission & distribution network) to "transmit" these imported electricity, who is going to be responsible for the reliability of the supply? Is it the problem with the transmission, or the problem of the supply generator, or both? Right now I have the convenience of just going to the 2 power companies to have all my electricity problem fixed. Would it be a lot of redirection, "hands-off" situation later if one company is to generate the supply, another to transmit? One can easily imagine how difficult the situation could be if the source of supply is in Mainland China! Even if "single point of contact" is still maintained with the power companies, segregation of duty would certainly lengthen the time to identify the cause of problem, complicate the problem solving procedure, hence higher administrative cost which would definitely be transposed to end consumers.

I therefore strongly oppose opening up the electricity's power grid to third parties just for the sake of introducing competition.

Dear Sirs

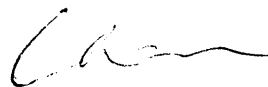

Stage II Government Consultation on the Future Development of the Electricity Market in Hong Kong

I found satisfactory on the performance of CLP due to current reliable & stable electricity supply; excellent customer services and acceptable and reasonable electric price.

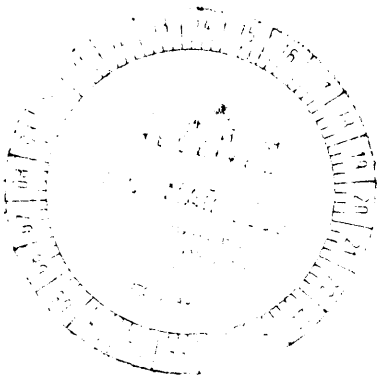

Future regulation of the electricity industry in Hong Kong is a matter of great importance to all our citizens. After reading the consultation paper proposals, my view and comments are as follows.

- ◆ Duration of the regime too short
- ◆ Unclear plans to migrate to a competitive market
- ◆ Environmental disincentives
- ◆ Inadequate incentives to encourage appropriate investment, while risk profile will be increased substantially

Yours faithfully,

W L Chan (Ms.)

Ms. Wong Lai Chun

27 March 2006

Economic Development and Labour Bureau
2/F., Central Government Offices,
Main & East Wings,
Lower Albert Road, Central,
Hong Kong

Dear Sir,

Future Development of the Electricity Market in Hong Kong

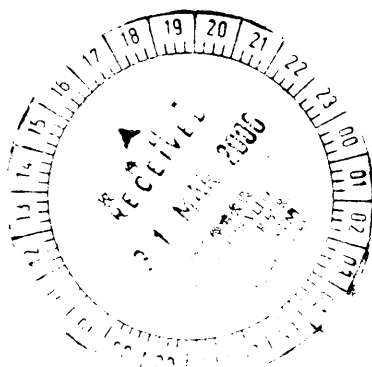

After reading the consultation paper on the captioned subject, I would like to express some views on it.

I share the same view with the government that reliability and safety of electricity supply should continue to be the primary objective for the future development of the electricity market. I also support the Government of using a similar bilateral agreement and an asset based approach for calculating return in the future.

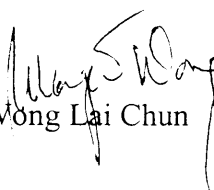

I fully comprehend the necessity of long-term investment in power industry to a high standard of supply reliability exceeding 99.99% in Hong Kong. As it is a fact that the power industry is capital intensive requiring long lead time for planning and long pay-back period, I afraid that the proposed regulatory period of only ten years is too short to ensure any long-term investment in the industry. Moreover, I have grave concern over the proposed post-2008 permitted rate of return in a range of 7-11% is too low to attract sufficient investment in the power industry. Insufficient investment will definitely undermine the reliability of electricity supply.

Frankly, I consider that the quality of power supply and services provided by the power companies is worth more than what I am paying now. In addition, I think that the current regulatory regime has been functioning satisfactorily and the Government has been successfully monitoring the two power companies. Therefore, I am not looking forward to any changes in the up-coming regulatory regime.

As reliable power supply is vital to Hong Kong for staying competitive and prospering in the future, I request the Government to stick to the current regulatory period of 15 years and the present permitted rate of return.

Yours truly,

Wong Lai Chun

Ms. YIM Kit-ling

Date: 30 March 2006.

Economic Development and Labour Bureau,
2/F., Central Government Offices,
Main & East Wings,
Lower Albert Road, Central,
Hong Kong.

Dear Sir/Madam,

Stage II Consultation on Future Development of the
Electricity Market in Hong Kong

I refer to the captioned consultation and would like to offer my views and comments on the Consultation Paper as follows: -

A. Policy Objective

The policy objective stated in the Consultation Paper is supported.

B. New Supply Sources

(I) Supply from the Mainland

Agree with the recommendations in the Consultation Paper. However, it is necessary to ensure the new supply sources are operating to similar environmental standards as that in Hong Kong.

(II) Renewable Energy (RE)

Agree with the recommendations in the Consultation Paper. However, the financial incentives must be attractive to the investment on the RE generations and grid access permission.

(III) Arrangement to Cater for New Supply Sources

(i) Grid Access

The proposal in the part of facilitating RE supply sources for use in Hong Kong is supported. Grid access to other less environmental friendly supply sources is not agreed.

(ii) Increase Interconnection

The increased interconnection must not jeopardize the supply reliability of the existing power systems.

C. Proposed Regulatory Arrangement

(I) Safety Regulation

Agree with the proposal in the Consultation Paper as safety of electricity is extremely important to the residents of Hong Kong.

(II) Environmental Regulation

The direction stated in the Consultation Paper is supported. However, the Government must work closely with the power companies to achieve the environmental targets. A clear energy policy with a clear roadmap must be established in order to take us there.

(III) Economic Regulation

(i) Regulatory Instrument

Support to continue with a similar bilateral agreement to regulate the operations of the power companies upon expiry of the current SCA. 15 years is appropriate for the duration of the agreement based on the past operating experience. A stable permitted rate of return should also be maintained as far as possible to provide a stable regulatory environment to facilitate long-term investments and a stable tariff.

(ii) Return

Agree to continue to adopt a fixed asset approach using ANFA as the base to provide the necessary incentives for the power companies. However, I do not agree the permitted rate of return be in the range of 7% to 11% as supply reliability is inter-related among the connected assets. The current rate of return is also considered appropriate when comparing with other major Companies in Hong Kong. A simple operating mechanism is essential and has been proved effective to minimize overall costs, therefore performance base applying to the permitted rate of return is not supported.

(iii) Tariff

The proposal in the part of tariff setting is supported. However, the tariff review and approval process must be transparent to the power companies. Mechanism must be in place for the power companies to appeal to the highest authorities for major differences.

(IV) Institutional Setup

Agree with the recommendations in the Consultation Paper.

Yours sincerely

YIM Kit-ling

Re: 香港電力市場未來發展 CC:

第二階段諮詢建議
 Urgent For Review Please Comment Please Reply Please Recycle

Comments:

協議年期「必須」維持十五年

電力行業涉及很長的投資年期及合約協議（例如液化天然氣合約在任長達二十五年），故此我們相信必須為電力投資者，提供足夠長期的協議年期保障，令到投資者樂意繼續投資。雖然電力行業，投資產的週期或二十至三十五年，投資在首八或九年仍屬負增長的回報，故此我們認為只持十年的協議年期實在太短及不能接受。

准許回報「必須」足以吸引投資

我們認為，政府建議的准許回報太低，實不足以吸引電力行業所需的龐大而長遠的投資。由於電力公司需要面對業內特定的風險，所以准許回報率要足以抵禦當中的風險及波動。

資產分類「必須」摒棄

建議中的四項資產分類回報水平並不合邏輯，只會令計算回報的方法更複雜，更甚處及增加行政費用，令到改善空氣質素的目標適得其反。我們認為現時的回報統一水平計算方法既直接又簡單，應該予以保留。

既然期望利用可再生能源或化石燃料產生的電力及相關的運輸成本和資金成本都一樣，回報率自然亦應一致。

減排罰則「必須」合情合理

我們認為建議中將准許回報與減排表現掛鉤的減排罰則機制不能接受。對投資者而言，投資回報是要彌補資金成本及機會成本，實不應與減排目標扯上關係。況且政府現時已有法例懲罰電力公司減排超標，這遠遠等同「雙重罰則」。

電力行業涉及長遠的投資，在現時缺乏「假二零零八年減排規管架構」的情況下，要求電力公司達到政府單方面訂定的減排目標，我們認為相當困難。

現時電價調整機制「必須」保留

我們認為建議中權更機制須先獲政府批准是不合理的。因為這樣只會令電價調整機制受政治壓力，如果電力公司非要通過議下仍不能保證收回成本及准許回報，管制機構的監察將會被徹底破壞，其作用亦會變得毫無裨益。

Subject: Hong Kong Electricity Market Public Consultation II
 Urgent Return Receipt

Dear Sirs,

I am an electrical engineer and would like to express my view on the future development of Hong Kong electricity market.

In the past decades, both CLP and HEC have been providing excellent services on electricity supply to Hong Kong. No matter what kind of reform in our electricity market will be implemented after 2008, it is very important that the quality of services and reliability of electricity supply must be assured. To achieve this target, I think that the government should establish a long term agreement (15 years or even longer) with the power companies for their continuous investment and development.

Regards,

MT Wong

Room 815, Central Government Offices,
West Wing,
Lower Albert Road, Central,
Hong Kong

Dear Mr. Ip,

**Response to Consultation Paper -
Future Development of the Electricity Market In Hong Kong Stage II Consultation**

We are pleased to respond to the Consultation Paper issued in December 2005 and will endeavor to contribute to the success of the future electricity industry in Hong Kong. Here are our views and comments on the Paper:

1. We agree with the Government's primary energy policy objective of ensuring that the public will enjoy reliable, safe and efficient energy supplies at reasonable prices and with minimal environmental impact.
2. We support a new SOC as an interim measure which could result in a reduction of tariff rates for consumers. The new SOC should also provide flexibility so to allow electricity suppliers to offer larger discount to large scale users. This will help them to become more competitive under the threat of new entrants.
3. We agree that competition between the incumbents and new entrants is a policy to be encouraged by the Government. Furthermore we suggest that the timescale for this objective should be left to the market. We expect this could be achieved before 2018, and that the Government should devise a new regulatory framework in the next three years to allow market competition and open access.
4. We consider it is essential that the Government should delineate the necessary policy, specifications, standards and access processes for the competition within the next three years. However, the Government should not be too concerned with the constraints and technical difficulties of the supply from the mainland as these are commercial issues for prospective new entrants to manage.

- 2 -

5. We suggest that standards for environmental emissions as prescribed by the Government should be met without passing the costs onto the consumer.
6. We suggest that incentives for RE and environmentally-friendly energy generation need to be made to the community and to business. Incentives will encourage consumers to seek for distributed power supplies and local consumption; and for incumbents and grid operators to accommodate and include this as part of the plan.
7. We recommend that the proposed limit of 200kW should be raised to a range of around 10MW. In particular we consider that the regulatory framework for RE, and environmentally-friendly suppliers of energy up to 10MW per installation, should also be supported by the regulatory framework for grid access developed to coincide with the proposed new SOC.
8. We suggest that the Government should devise an explicit framework as soon as possible to allow competition to start should new entrants wish to enter the market by providing their own small-scale grids. Although there will be no immediate full-scale competition under the proposed new SOC, some competition will emerge during the time when the Government is pressing ahead with plans for the incumbents to open up their grids.
9. We consider that the ten-year SOC period offered to incumbents may be insufficient for any commercial utility business to invest, and make a return on their investment. We recommend that suppliers should be offered the incentive of SOC extension for a further ten years subject to their satisfactory performance in reaching targets for supply quality, environmental and other agreed objectives.
10. Our primary concern is that the Government set a policy to bring about competition in the electricity market by settling a timescale within which it can be achieved, and by laying down a framework and guidelines for the proposed new SOC to facilitate this process.

If you have any queries or questions on our response, please feel free to contact me.

Yours sincerely,

A handwritten signature in black ink that reads 'A. McCusker'.

These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Stage Two Consultation on Future Development of the Electricity
Market in Hong Kong

Urgent Return Receipt

Dear Sir,

Attached please find my comment for your consideration.

Best regards,
Mullar

**Future Development of the Electricity Market in Hong Kong
Stage II Consultation**

Dear Sir,

After reviewing the Stage II Consultation Paper on the Future Development of the Electricity Market in Hong Kong, I am quite sure that there would be very little argument on the policy objective of ensuring reliable electricity supply at reasonable prices and minimizing the environmental impact caused by production and use of electricity. However, how to achieve this objective requires a lot of thoughts and consideration. Being a permanent resident of Hong Kong, I would like to give my comment on some of the proposals outlined in the consultation paper for your consideration:

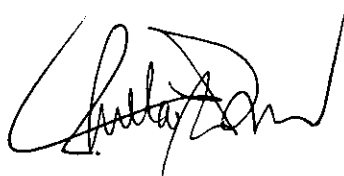

Supply from the Mainland

Hong Kong has gone a long way from a small fishing community to become one of the vibrant financial and trading centres in the world. In my opinion, reliable and efficient supply of electricity has been a key contributing factor to Hong Kong's success and will continue to play a vital role in sustaining the long-term growth of Hong Kong. Obviously, people in Hong Kong have been enjoying exceptionally reliable supply of electricity for too long and may not be aware of the risk of importing electricity from the Mainland. We have to understand that the phenomenal economic growth of the Mainland during the past two decades has outstripped all expectations and imposed severe stress on its electricity supply system. This inevitably has led to suboptimal reliability of supply. Besides, all electricity suppliers in the north are being regulated by a separate jurisdiction with different set of rules and priorities. Given the poor reliability record of the Mainland, importing supply from Guangdong or other provinces will likely hamper the reliability of electricity supply in Hong Kong. As such, I believe that the existing model of having generation, transmission and distribution of electricity being taken care of by the two local power companies is the best arrangement.

Permitted Rate of Return

While I agree that an adequate level of incentive must be offered to the incumbent and new investors for making continuous investment in maintaining a stable and reliable supply of electricity in Hong Kong, I do not believe it is necessary to adopt a complex regulatory framework within which a multi-tier rate-of-return structure will be applied to different types of assets of the electricity-supply infrastructure. In addition, the Consultation Paper fails to give convincing justifications as to why different permitted rates of return have to be applied to different types of assets, let alone a sound basis for the proposal of 'fixing' the rates between 7% to 11%. Supply of electricity is a capital-intensive business. The Hong Kong SAR Government must institute a simple regulatory regime and maintain a reasonable rate of return in order to encourage investment.

In conclusion, the existing Scheme of Control Agreements have been serving Hong Kong well. Any changes to the existing regulatory framework must not deter investors from making adequate level of investment - a decisive factor to sustaining reliable and efficient supply of electricity in Hong Kong.

Subject: Response to Consultation Paper on Future Development of the Electricity Market in Hong Kong

Urgent Return Receipt

To Economic Development and Labour Bureau,

As a Hong Kong citizen, I am very much concerned about the air pollution caused by the power stations. I strongly demand the government to enhance control in the electricity market, so as to restrict all sorts of pollution induced by power generation. These control measures must not be used by the electricity companies as a pretext for an escape from their social and environmental responsibilities. I thus recommend:

1. The permitted rate of return of power companies should be linked with the total emission caps set under the power companies' licences. Those cannot achieve the caps should have the rate of return reduced;
2. The investment in renewable energy (RE) should earn a higher level of permitted rate of return;
3. We support RE, but not incineration which generates green house gas;
4. Energy saving is fundamental in reducing pollution, as it saves money and conserves our resources. We demand the SAR government to set up a concrete and clear energy saving target;
5. Energy Administration should be established to coordinate the planning of electricity market in terms of economic, social, environmental and regional development;
6. The cooperation in RE development between Guangdong and Hong Kong should be speeded up, including the regional blueprint of wind energy development.

I cordially demand the SAR government to bring us back the blue sky and a breath of clean air.

Subject: Electricity Open Market Issue
 Urgent Return Receipt

To whom it may concern:

In fact, I have to say I DO NOT AGREE on the ELECTRICITY OPEN MARKET. To be honest, it is impossible to have a cheaper price after opening market for other party, it is such a large investment in Hong Kong. We may need to pay even more electricity fee at the end of the day. Mind you, any one of investor will definitely need to increase their income within a certain short period of timing; therefore they would need to do some thing on their cost, some area such as environmental and value services for supplying power may need to be deducted in order to meet up with their profitability balances. As if the value and reliable services would be disappeared or less since their investment strategy would be changed. All of these would not be a benefit to Hong Kong at all.
